PRESENTATION

For the eighth consecutive year, and in compliance with Article 30 of Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence, the National Observatory on Violence against Women is once again proud to publish its Annual Report. As is well known, Spain is committed to compiling comprehensive data and statistics on violence against women in order to help raise social awareness of the issue and guide public and private action to combat it. Public administrations' duty to ensure transparency and to facilitate access to information, as set forth in Law 19/2013 of 9 December 2013 on transparency, access to public information and good governance, cements this commitment to raising awareness about the problem.

We now know more about the environments in which this grave social and cultural problem that affects every corner of the world occurs. Likewise, we are increasingly well informed about which steps take us most effectively towards eradicating violence against women. As a benchmark modern and democratic society, we cannot ignore the silence induced in victims by fear, shame or guilt; the repercussions on minors living with women who suffer gender-based violence; the myriad forms of violence against women; or the evident replication among young people of sexist roles and forms of conduct that we believed we had conquered.

Awareness-raising is now an indisputable part of the work done by the Government Office for Gender-Based Violence and the National Observatory on Violence against Women. The National Strategy to Eradicate Violence against Women 2013–2016 made this public policy and it is now firmly established as a priority goal, because taking effective action first requires in-depth understanding.

As part of this constant effort to examine new variables, data and information, the 2014 Report introduces several major new features. The most noteworthy of these are listed below:

1. The data on fatal victims have been screened and validated and data on several victim and/or aggressor variables, fundamentally from previous years, have been retrieved.
2. In the analysis of the socio-demographic characteristics of fatal victims and their aggressors, the country of origin variable has been replaced by country of birth. This methodological change reveals the origin of victims born outside Spain whose status as such was obscured in the statistics published to date if they took Spanish nationality. This change was made in response to requests from several Observatory bodies.
3. The information on female fatal victims has been supplemented with a section containing data, by geographic and socio-demographic characteristics, on minors who were fatal victims of gender-based violence in 2014.
4. The content and structure of the chapter on police assistance and protection have undergone substantial amendment. Firstly, in response to observations made by members of the Observatory, a major change has been made to the chapter by removing information included in previous editions that did not contribute new or relevant data and by adding other information that facilitates broader understanding of the situation. Secondly, for the first time, socio-demographic data on the victims registered in the system as at 31 December 2014 have been included. Until now, only data on changes in figures, broken down by autonomous community and province, were shown.
5. The information on users of the ATENPRO service has undergone a major change and now includes socio-demographic data on all users registered with ATENPRO at some point in 2014. Up until 2013, the socio-demographic data only applied to users registered at 31 December. In other words, they only provided a snapshot on that date.

6. As in the chapter on the ATENPRO service, a change has been made to the chapter on the System for Monitoring Restraining Orders on Gender-based Offenders (wristbands), modifying how the socio-demographic characteristics of victims and aggressors fitted with devices are shown. Up until 2013, this chapter presented socio-demographic data on couples registered as active in the system at 31 December, once again only providing a snapshot on that date. For 2014, the socio-demographic data show all victims and aggressors fitted with devices and registered in the monitoring system at some point in 2014.

This 8th Statistical Annual Report on Gender-Based Violence maintains the change of approach adopted in 2012 by splitting the findings into the following 15 chapters (and an annex summarising the data for each autonomous community – plus Ceuta and Melilla – and province), presenting the basic data for the periods under review and indicating the information source in each case:

1. Fatal victims of gender-based violence,
2. Formal complaints of gender-based violence,
3. Female victims of gender-based violence receiving police assistance,
4. Judicial data on gender-based violence,
5. 016 helpline providing information and legal advice on gender-based violence,
6. ANAR helpline for children and adolescents at risk,
7. Female users of the ATENPRO assistance and protection helpline for victims of gender-based violence,
8. Subsidised employment contracts for female victims of violence, and substitution contracts for victims of gender-based violence,
9. Female victims of violence receiving Active Insertion Income (RAI),
10. Female victims of gender-based violence receiving the financial aid established under Article 27 of the Comprehensive Protection Law,
11. Temporary residence and work permits granted to foreign female victims of gender-based violence and residence permits granted to applicants' children,
12. Gender-based violence offenders serving prison sentences,

13. Electronic monitoring of restraining orders on gender-based violence offenders,
14. Statistics on domestic and gender-based violence (National Statistics Institute),
15. Conclusions of the working group (created within the National Observatory on Violence against Women) analysing the response of the justice system to gender-based violence.

As in previous years, I would like to end this foreword by expressing my sincere gratitude to each and every one of the Observatory's committees for their intellectual and personal contribution towards achieving equality between men and women and to ending all forms of violence against women and girls.

Blanca Hernández Oliver
Government Delegate for Gender-based Violence

METHODOLOGICAL NOTES

In compliance with Article 30 of Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence (hereafter referred to as the Comprehensive Protection Law), the National Observatory on Violence against Women has approved the following Annual Reports:

- 1st Annual Report by the National Observatory on Violence against Women, approved on 28 June 2007. Along with this 1st Annual Report, the Observatory approved creation of a system of indicators and variables to analyse and monitor gender-based violence and to build up a database which would allow performance of these functions.
- 2nd Annual Report by the National Observatory on Violence against Women, approved on 22 May 2009.
- 3rd Annual Report by the National Observatory on Violence against Women, approved at meetings held on 9 June and 13 July 2010.
- 4th Annual Report by the National Observatory on Violence against Women, approved at a meeting held on 8 November 2011.
- 5th Annual Report by the National Observatory on Violence against Women, approved at a meeting held on 5 July 2013.
- 6th Annual Report by the National Observatory on Violence against Women, approved on 17 December 2013.
- 7th Annual Report by the National Observatory on Violence against Women, approved on 19 November 2014.
- 8th Annual Report by the National Observatory on Violence against Women, approved on 3 June 2016.

The 2014 Statistical Annual Report on Gender-based Violence comprises 15 chapters.

The methodological notes in each of the chapters of the Statistical Annual Report cite the information sources used and the authors would like to take this opportunity to thank them for their work and contribution. The notes also highlight several aspects that need to be taken into account in order to place the data included in the Annual Report's various chapters in their proper context.

1. FATAL VICTIMS OF GENDER-BASED VIOLENCE

Source: Government Office for Gender-based Violence

In this section of the Statistical Annual Report, the Government Office for Gender-based Violence presents data from individual reports of fatal victims of gender-based violence (defined under the Comprehensive Protection Law as women killed by their partners or ex-partners). The data series begins on 1 January 2003.

The data for 2003–2005 come from the Institute for Women's Affairs (INMUJER), which compiled its information from media sources. From 2006 onwards, the data originate from the Government Office for Gender-based Violence, which records each fatal case reported by regional and provincial government offices and, since their creation, by the Co-ordination Units and by the Violence against Women Units. The latter currently report to the Ministry of Health, Social Services and Equality through the Secretariat of State for Social Services and Equality. These units compile data from each case dealt with by Spain's national security forces, regional police forces, courts and public prosecutor's office.

With regard to action taken by fatal victims to alert security forces to the situation prior to their death, the database created to monitor such cases and used in drafting this report holds complete and consistent data from January 2006 onwards.

It should be noted that some of the cases included in this 8th Report are provisional, since although charges had been brought against the alleged aggressors, a final sentence had not been passed at the time of drafting.

The Government Office for Gender-based Violence works in close collaboration with the Public Prosecutor's Office and with the General Council of the Judiciary to compare and collate information so as to avoid recording cases more than once under varying criteria.

Finally, we should point out that the diversity and foreseeable disparities in the criteria applied by the information-gathering systems over time, as well as the limited statistical significance of the number of fatal victims of gender-based violence, make it necessary to view the data included in this report with prudence. Nevertheless, the report seeks to be exhaustive.

2. FORMAL COMPLAINTS OF GENDER-BASED VIOLENCE

Source: General Council of the Judiciary

The General Council of the Judiciary is the source of the data on formal complaints of gender-based violence, while the figures themselves come from quarterly aggregate-data questionnaires filled in by court clerks. The General Council of the Judiciary has been publishing these data quarterly since 1 January 2007. The figures refer to formal complaints submitted to the courts by national security forces and regional and local police forces; to formal complaints deriving from injury reports; and to formal complaints filed directly with the courts by victims, their relatives or third parties.

The level of data disaggregation allows for analysis of the source of formal complaints, of their geographical distribution, and of trends over time, all at quarterly intervals. It is not possible to determine the victims' and reported aggressors' socio-demographic characteristics (age, marital status, level of education, employment status, nationality, etc.).

Furthermore, there is no information on the number of cases in which more than one formal complaint was filed for the same victim.

3. FEMALE VICTIMS OF GENDER-BASED VIOLENCE RECEIVING POLICE ASSISTANCE

Source: Ministry of the Interior

These statistics come from the Comprehensive Gender-based-Violence Case Monitoring System (VioGén), an IT application in operation at the Secretariat of State for Security, which reports to the Ministry of the Interior.

The VioGén system, which went into operation in July 2007, is intended to provide victims of gender-based violence with greater protection by predicting risk levels, monitoring cases and, when required, assigning

police protection. This system allows Spain's civil guard and national, regional and local police to coordinate their actions.

Although the terms “case of gender-based violence” and “victim of gender-based violence” are very similar in concept, they are not identical. Each case contains all the information that associates a victim with a single aggressor. Consequently, if over time a woman is a victim of gender-based violence suffered at the hands of more than one aggressor, a separate case is opened for each aggressor.

4. JUDICIAL DATA ON GENDER-BASED VIOLENCE

Source: Ministry of Justice and Public Prosecutor's Office of the Special Court for Violence against Women, Crown Prosecution Service

The Ministry of Justice is responsible for government relations with the judicial administration and for annually scheduling and creating the judicial and public prosecution services required. It is also responsible for providing the Public Prosecutor's Office and those courts under its jurisdiction (the autonomous communities of Castilla-La Mancha, Castilla y León, Murcia, Madrid and Extremadura and the autonomous cities of Ceuta and Melilla) with the material and human resources necessary to carry out their functions; for managing the administrative records that support the administration of justice; and for subsidising provision of legal aid by Spain's colleges of lawyers in non-transferred jurisdictions.

All of these powers influence government policy to eradicate gender-based violence and, in particular, they influence judicial prosecution and reparation of this violence and victim access to the administration of justice. The exercise of these powers by the Ministry of Justice generates statistical data that is of enormous value when analysing trends in judicial protection in the domain of gender-based violence.

5. 016 HELPLINE PROVIDING INFORMATION AND LEGAL ADVICE ON GENDER-BASED VIOLENCE

Source: Government Office for Gender-based Violence

The 016 helpline providing information and legal advice on gender-based violence forms part of the raft of Urgent Measures to Combat Gender-based Violence approved by the Council of Ministers on 15 December 2006.

This service went into operation on 3 September 2007 with the objective of providing information and legal advice to victims of gender-based violence across the whole country, regardless of place of residence. It is intended to guarantee the right to information of victims of gender-based violence, as established in Article 18 of the Comprehensive Protection Law, and to ensure that they receive assistance, are able to exercise their rights and have access to the resources available to them.

As well as providing specialised assistance on how to deal with gender-based violence to victims and their immediate circle 24 hours a day, 365 days a year, and doing so free of charge, this helpline also provides:

- Access to the public service via a short, easily remembered and quickly dialled three-digit number — 016.
- Universal access — apart from Spanish and the country's co-official languages (Catalan, Galician and Basque), it also takes calls in 47 other languages.
- Constantly updated information about the rights of female victims of gender-based violence and about the specialised resources (employment incentives, social services, financial aid, information and assistance, and legal aid) immediately available in situations of abuse.
- Provision of information by a team of university-qualified operators specially trained in gender-based violence.
- Expert legal advice provided by a team of jurists specialising in gender-based violence (available between 9:00 and 21:00 from Monday to Friday, and between 12:00 and 20:00 on Saturdays, Sundays and public holidays).
- Guaranteed confidentiality of the data provided by users of the service.
- Automatic referral of emergency calls to regional emergency services (112 emergency number).

The data used to compile this report were provided by Arvato-Qualytel, the provider of the helpline service, and refer to relevant calls, i.e. calls relating to gender-based violence answered by the service between 3 September 2007 and 31 December 2014. Within the calls categorised as non-relevant, i.e. calls not relating to gender-based violence answered by the service,

information on the number of malicious calls received is available from 1 April 2008 onwards, and detailed descriptions of their typology have been available since January 2011. Furthermore, from November 2009 onwards the data include the length of the relationship between victim and aggressor, as well as the type of abuse suffered, with the latter disaggregated into physical, psychological and sexual abuse. As from December 2010, the types of abuse include emotional, social and financial abuse.

6. ANAR HELPLINE FOR CHILDREN AND ADOLESCENTS AT RISK

Source: ANAR Foundation

In 1994, the ANAR Foundation launched the ANAR Child and Adolescent Helpline (900 20 20 10), a free and confidential service available throughout the country 24 hours a day, 365 days a year. It also operates the ANAR Adult and Family Helpline, a free service for adults who need guidance on child-related issues.

This helpline offers minors at risk immediate psychological, social and legal support.

Based on its experience of operating the helpline, the ANAR Foundation identifies two situations in which gender-based violence may exist:

- Situations of gender-based violence in which a minor is the direct victim.
- Situations of gender-based violence in which a minor forms part of a female victim's family circle.

On 31 July 2009, the Secretariat of State for Social Services and Equality and the ANAR Foundation signed an agreement under which, in cases of gender-based violence and based on the age of the caller, calls are mutually referred between the Foundation's helplines and the 016 service.

Each year, the ANAR Foundation provides the Government Office for Gender-based Violence with data gathered from the two above-mentioned helplines.

The data presented in this report were provided by the ANAR Foundation and refer to the period between 1 January and 31 December 2014. The microdata are aggregated by autonomous community, age, nationality, etc., of the minor referred to in the call.

7. FEMALE USERS OF THE ASSISTANCE AND PROTECTION HELPLINE FOR VICTIMS OF GENDER-BASED VIOLENCE (ATENPRO)

Source: Government Office for Gender-based Violence

The plan entitled Urgent Measures to Prevent Gender-based Violence, approved by the Council of Ministers of 7 May 2004, assigned the Secretariat of State for Social Services, Families and People with Disabilities, which reported to the Ministry of Employment and Social Affairs, responsibility, through the Institute for the Elderly and Social Services (IMSERSO), for operating a helpline for victims of gender-based violence. This service went into operation in December 2005.

Since 1 January 2010, this service has been operated by the Ministry of Health, Social Services and Equality through the Government Office for Gender-based Violence, after which it was renamed the Assistance and Protection Helpline for Victims of Gender-based Violence (ATENPRO).

To manage the service, annual agreements are signed with the FEMP (Spanish Federation of Municipalities and Provinces), via which provision of the ATENPRO helpline is subsidised and contracted to organisations able to guarantee the highest standards of assistance and protection for the service's female users.

The information included in this Annual Report was supplied by the service providers. In the case of EULEN, it refers to the south of Spain and spans the period between 2005 and December 2012, while in that of the Spanish Red Cross it refers to the north and east of Spain and covers the period between 2005 and December 2014. Since 2013, the Spanish Red Cross has been the sole service provider.

The data for 2005 were provided by the Spanish Red Cross on 8 December and by EULEN on 16 December of that year.

Due to the way the records are processed, the overall figures, which are received on a monthly basis, do not coincide exactly with the microdata provided by the two organisations. With regard to socio-demographic characteristics, the following should be noted:

1. Data on aggressors are provided exclusively by EULEN.
2. The information on whether the victim currently lives alone or with someone other than the aggressor is provided by the Red Cross.

3. Data on the size of the victim's place of residence is only provided by EULEN.

All other variables analysed are provided by both organisations. The Government Office for Gender-based Violence is working to standardise the criteria applied.

Note that it is possible that, by moving to another autonomous community, a victim may receive assistance successively from both providers and, therefore, may be recorded twice in the data.

8. SUBSIDISED EMPLOYMENT CONTRACTS FOR FEMALE VICTIMS OF VIOLENCE, AND SUBSTITUTION CONTRACTS FOR VICTIMS OF GENDER-BASED VIOLENCE

Source: State Public Employment Service. Ministry of Employment and Social Security

The Comprehensive Protection Law guarantees a series of employment and social security rights for female victims of gender-based violence in order to help them balance their work obligations with their need for protection and the opportunity to achieve full recovery.

Likewise, Royal Decree 1917/2008 of 21 November 2008, which approves the social and labour-market integration programme for female victims of gender-based violence, sets out active employment measures designed to make it easier for victims to find employment and to increase their personal independence, and to make available to them all the resources established for these purposes. The measures set forth in the Royal Decree include: individual guidance on social and labour-market integration by specialised personnel; training programmes; incentives to encourage self-employment; incentives to encourage companies to hire victims of gender-based violence; incentives to facilitate geographic mobility; incentives to compensate for salary differences; and agreements with companies to hire victims of gender-based violence.

The data on subsidised employment contracts presented in this report refer to the period between 1 January 2003 and 31 December 2014, while the data on substitution contracts refer to the period between 1 January 2005 and 31 December 2014.

In 2014, the State Public Employment Service provided the Government Office for Gender-based Violence with extended data on:

- The total number of employment contracts and the total number of subsidised employment contracts signed by women in order to compare those with the number of subsidised employment contracts signed by victims of violence.
- The number of social and labour-market integration services initiated and completed in 2014 affecting the total number of women and those initiated and completed affecting female victims of gender-based violence to improve their employability and facilitate labour-market integration.

Although data on subsidised employment contracts are available from 2003 onwards, it should be noted that a specific code identifying subsidised employment contracts for victims of gender-based violence was not introduced until December 2006. Therefore, the data analysed refer to female victims of both domestic and gender-based violence.

The following important details should be borne in mind:

- In the analysis of subsidised employment contracts by level of education, the levels defined by the SEPE have been grouped as follows to facilitate monitoring:
 - No education: illiterate.
 - Primary education: primary education (whether completed or not).
 - Secondary education: first- and second-stage secondary education and vocational education and training courses of more than 300 hours.
 - Higher education: higher education or equivalent vocational training, plastic arts and design courses, non-accredited university courses, combined education and training courses of more than 300 hours, university diploma and degree courses, accredited specialisations and postgraduate courses.
- In the analysis of employees on subsidised contracts by occupation, the data have been grouped as follows to facilitate monitoring:
 - Armed forces.
 - Management: private- and public-sector managers.

- Engineering and professions: engineers, scientists, intellectuals and qualified support staff.
- Administrative work: administrative staff.
- Skilled work: catering staff; personal assistants; retail sales and security staff; skilled farm and fishery workers; craftspeople and skilled manufacturing-, construction- and mining-industry workers (excluding plant and machinery operators).
- Machine operation: plant and machinery operators.
- Unskilled work: unskilled workers.

9. FEMALE VICTIMS OF GENDER-BASED VIOLENCE RECEIVING THE ACTIVE INSERTION INCOME (RAI)

Source: State Public Employment Service. Ministry of Employment and Social Security

Creation of the RAI is part of an initiative run by Spain's social security system to protect the unemployed in accordance with EU employment directives. As well as benefit payments, the scheme provides specific training, skills enhancement and guidance, and facilitates re-skilling and labour-market integration.

Article 2 of Royal Decree 1369/2006 of 24 November 2006, which regulates the RAI scheme for unemployed persons with special economic needs and difficulty finding employment, includes as beneficiaries unemployed women under 65 years of age who, on the date of applying for inclusion in the scheme, can show proof accredited by a competent administrative body of being victims of gender-based or domestic violence (unless they are living with the aggressor), who are registered as jobseekers, who are not entitled to unemployment benefit or income support, and who do not receive income from any source in excess of 75% of the minimum wage when calculated monthly (excluding the proportional part of two extraordinary monthly payments).

These women are required to sign a pledge to carry out the activities assigned by the public employment service as part of their personal labour-market-integration plans, and to uphold that pledge while subscribed to the scheme. Furthermore, they must fulfil other obligations, such as accepting appropriate jobs offered to them, updating their employment applications as necessary, actively seeking work, etc.

The RAI benefit is equal to 80% of the value set by the monthly Multiple-Effect Public Income Reference Index (IPREM) and is received for a maximum of 11 months.

As regards the aid to change address, the Royal Decree provides for payment of a supplementary lump sum equivalent to three months' RAI benefit to women who can prove that they were forced to change address because of gender-based violence in the 12 months prior to applying for inclusion in the scheme or while part of the same. This payment does not affect the duration of the benefit and is receivable every time the applicant is admitted into the RAI scheme.

Receipt of the RAI is incompatible with the financial aid provided under Article 27 of the Comprehensive Protection Law (described in detail in the following section), which is envisaged for female victims of gender-based violence who, due to their circumstances, have particular difficulty finding a job and therefore do not participate in the programmes set up to facilitate labour-market integration, such as the RAI scheme. That notwithstanding, they can still join the RAI scheme once those circumstances change.

The data refer to the period between 1 January 2006 and 31 December 2014. In 2014, the State Public Employment Service provided the Government Office for Gender-based Violence with extended data on:

- Total number of women receiving the RAI and number of female victims of violence receiving the RAI.

In the analysis carried out, domestic violence and gender-based violence are not considered separately. When analysing the data, the following points should be noted:

- As in the case of subsidised employment contracts, prior to December 2006 there was no specific code for victims of gender-based violence, so the analysis refers to female victims of both domestic and gender-based violence.
- In the analysis by age group, the age taken was that at which the woman began to receive the RAI.
- In certain cases, the same woman may have been counted more than once, given that it is feasible that a woman may:

- have received the RAI in more than one province; or
- be recorded under more than one nationality. In these instances, the woman's last stated nationality is counted.

Employed female victims of gender-based violence are entitled to suspend their employment contract temporarily and have the right to return to their position, or to terminate their contract, at a later date. Both cases are considered to be situations of involuntary unemployment and entitle them to receive benefits or income support according to the length of time they have been in employment and making social security contributions. This section includes a reference to the numbers of women who received this unemployment benefit or income support between 2006 and 2014 after suspending or terminating their employment contract.

10. RECIPIENTS OF THE FINANCIAL AID ESTABLISHED UNDER ARTICLE 27 OF THE COMPREHENSIVE PROTECTION LAW 1/2004

Source: Government Office for Gender-based Violence

Article 27 of the Comprehensive Protection Law, implemented by Royal Decree 1452/2005, guarantees financial aid to victims of gender-based violence whose income is below a specific threshold and who, due to their age, social circumstances, or lack of general education or special skills, have particular difficulty finding a job. Provision of this financial aid is conditional upon them meeting both of the following requirements:

- Not having income in excess of 75% of the current minimum wage when calculated monthly (excluding the proportional part of two extraordinary monthly payments); and
- Having special difficulty finding employment, which should be accredited by a report issued by the State Public Employment Service.

In general, the amount of this aid is equivalent to six months' unemployment benefit. However, the amount may vary, and receipt may be extended to twelve, eighteen or twenty-four months, depending on the beneficiary's family responsibilities and, if applicable, on the beneficiary's degree of officially recognised disability (equal to or above 33% and applicable to both the victim and any family members under her care or minors living under her roof).

This aid is compatible with all allowances provided for under Law 35/1995 of 11 December 1995 on aid and assistance for victims of violent crime and crimes against sexual freedom.

This aid is granted and paid as a lump sum by the administrative body responsible for social services (i.e. regional government) in accordance with its rules of procedure. The Ministry of Health, Social Services and Equality reimburses regional governments providing this aid for the full amount paid and charges the expense to the National General Budget in accordance with that established at the 2005 National Conference on Women's Issues.

The Government Office for Gender-based Violence is responsible for collecting, analysing and publishing data on the financial aid granted under Article 27 of the Comprehensive Protection Law.

Data are available for the period covering 2006 to December 2014. These data are obtained from the bimonthly information provided by regional governments and from the reimbursement applications which the regional governments submit to the Government Office for Gender-based Violence every six months. The data that appear in this report coincide with the information held by the Government Office as at 31 December 2014.

11. TEMPORARY RESIDENCE AND WORK PERMITS GRANTED TO FOREIGN FEMALE VICTIMS OF GENDER-BASED VIOLENCE AND RESIDENCE PERMITS GRANTED TO APPLICANTS' CHILDREN

Source: Ministry of Public Administration and Finance

Article 17 of the Comprehensive Protection Law guarantees the rights of victims of gender-based violence, regardless of their origin, religion or any other personal or social condition or circumstance.

The legislation applicable to foreign nationals resident in Spain (excluding EU/EEA/Swiss citizens and their family members) is set forth primarily in Organic Law 4/2000 of 11 January 2000 on the rights and freedoms of foreign nationals in Spain and social integration thereof. This law has been amended many times since initial enactment.

In relation to gender-based violence, until 2009 Article 30.3 of the law allowed for the issue of temporary residence permits on humanitarian grounds

on condition of compliance with applicable regulatory criteria. The regulation in force until then (implemented by Royal Decree 2393/2004) established a series of circumstances under which these permits could be issued. One of these was “victims of crimes deriving from violent conduct in the home under the terms set forth in Law 27/2003 of 31 July 2003 regulating the order protecting victims of domestic violence, provided that the aggressor has been sentenced for such crimes.” These permits were valid for one year.

In 2009, Organic Law 2/2009, of 11 December 2009, which amended Organic Law 4/2000, introduced Article 31a (in effect since 13/12/09), which allowed for the issue of temporary residence permits on the grounds of exceptional circumstances specific to victims of gender-based violence.

One of the new features of this article is that it allowed for the issue of a provisional permit as soon as a protection order is issued or, in the absence of this, upon receipt of a report by the Public Prosecutor’s Office indicating detection of signs of gender-based violence. Upon issue of a conviction or court decision indicating that the woman has been a victim of gender-based violence, a five-year permit is issued.

In 2011, Organic Law 10/2011 of 27 July 2011 (in effect since 29/07/11), amended Article 31a to include, among other considerations, issue of permits for children of female victims of gender-based violence.

Item 2 (temporary residence and work permits granted to foreign female victims of gender-based violence on the grounds of exceptional circumstances) of Royal Decree 557/2011, of 20 April 2011, which implements the regulations of Organic Law 4/2000, on the rights and freedoms of foreign nationals in Spain and social integration thereof, amended by Organic Law 2/2009 and Organic Law 10/2011, establishes the following:

“Article 131. Formal complaints referring to foreign female victims of gender-based violence.

If, when a case of gender-based violence against a foreign female is reported, her status as an illegal immigrant comes to light, the administrative disciplinary proceedings initiated as a result of breach of Article 53.1(a) of Organic Law 4/2000 of 11 January 2000 shall be suspended immediately by the examining magistrate until completion of

the criminal proceedings. In the event that disciplinary proceedings had not been initiated before the formal complaint was made, the decision regarding commencement of the former shall be postponed until completion of the criminal proceedings.

The authority to which the formal complaint is made shall inform the foreign female immediately of the possible outcomes of application of this Article, as well as of her rights under Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence.”

Since 2011, issue of temporary residence and work permits to female victims of gender-based violence and their children on the grounds of exceptional circumstances has been governed by the amendment to Article 31(a) of Organic Law 4/2000, amended by Organic Law 10/2011 and by Article 133 of Royal Decree 557/2011. These permits are issued to foreign women with illegal immigrant status who are victims of gender-based violence.

Following these amendments, provision for issue of residence due to exceptional circumstances granted on humanitarian grounds to victims of domestic violence (currently regulated by Article 126.1 of the regulation) remains in effect and is applicable to other victims of domestic violence. Victims' children aged under 16 or victims' children with disabilities may be granted residence permits on grounds of exceptional circumstances but not on grounds of work.

It should be noted that the data extracted from the application refer to the number of permits granted, not to the number of women. A very high proportion of definitive permits (although not all) are issued to women previously granted provisional permits. In addition, the data refer to permits processed in the year in question and therefore the number of these may not coincide with the number of applications submitted.

Articles 132, 133 and 134 set out the details of the initiation, provisional authorisation and conclusion of the authorisation procedure.

In accordance with the above, this 8th Annual Report by the National Observatory on Violence against Women includes all temporary residence permits due to exceptional circumstances granted on humanitarian grounds to foreign female victims of domestic violence entered in the records held by the National Immigration Registry at the Ministry of Public Administration and Finance as at 31 December 2013.

12. GENDER-BASED VIOLENCE OFFENDERS SERVING PRISON OR ALTERNATIVE SENTENCES

Source: Ministry of the Interior

Crimes of gender-based violence have been classified as such in the Penitentiary Information System since 25 August 2005 following the entry into effect of Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence. On 01/01/12, a change in methodology entered into effect consisting of using the Penitentiary Information System as an official source of data for the Secretariat-General for Penitentiary Institutions, replacing the statistical questionnaires completed by penitentiary centres prior to that date. From that date onwards, crimes of gender-based violence have been included in the prison population crime statistics table. Prior to that date, queries were submitted to the Penitentiary Information System on an ad hoc basis.

The figures for the number of gender-based violence offenders serving prison sentences come from the Directorate-General for Penitentiary Institutions (Ministry of the Interior) which, since the end of 2009, submits to the Government Office for Gender-based Violence monthly aggregate microdata on the number of prisoners held for these crimes.

Although these data refer to convicted offenders serving sentences for crimes of gender-based violence, not all of these offenders were convicted exclusively for this type of crime and may have been accused of other crimes as well.

Furthermore, data are also available on the number of prisoners on remand for crimes of gender-based violence since 31 December 2013, and on the type of crime of which they are accused. These data are also provided by the Directorate-General for Penitentiary Institutions (Ministry of the Interior).

The data likewise include crimes against the administration of justice, which consist of breach of sentence or precautionary measures imposed for crimes of gender-based violence.

The microdata are broken down by age, nationality, habitual province of residence declared by the offender, length of sentence and type of crime. The source is the Penitentiary Institution Information System.

This report includes data on sentences and alternative measures for crimes of gender-based violence, as provided by the Secretariat-General for Penitentiary Institutions (Ministry of the Interior).

13. ELECTRONIC MONITORING OF RESTRAINING ORDERS ON GENDER-BASED VIOLENCE OFFENDERS

Source: Government Office for Gender-based Violence

The judicial measures set out in Article 64.3 of the Comprehensive Protection Law to ensure the protection and safety of victims prohibit accused aggressors from approaching the protected person. They also establish possible agreed use of appropriate technology and devices to provide immediate warning of any breach of a restraining order. Therefore, use of these devices — by judicial ruling — initially envisaged only for convicted offenders barred from approaching their victims, may be extended to enforce restraining orders imposed as a precautionary measure in gender-based violence proceedings in progress within the scope of the Comprehensive Protection Law.

Implementation of electronic monitoring became effective throughout Spanish territory on 24 July 2009.

The system consists of two devices that monitor the accused aggressor — a radio frequency transmitter and a mobile unit with GPS tracking capability — and one device for the victim — a mobile unit with a GPS receiver which provides information on the accused aggressor's whereabouts.

The system constantly monitors the whereabouts of both the accused aggressor and the victim and generates an alarm message when the distance between the two is less than the distance established by the court in the restraining order imposed on the accused aggressor. The victim's device emits audio and visual warnings and/or vibrates and sends an alarm message to the control centre if it detects the radio frequency signal emitted by the wristband worn by the accused aggressor.

The device worn by the accused aggressor generates an alarm message if the electronic device detects an incident or if any of the terms of the restraining order established in the court sentence are breached. These alarms are known as "events". The system establishes fixed exclusion zones (the victim's home address, place of work, or anywhere else frequently visited), as well as a mobile exclusion zone based on the victim's whereabouts at any given time.

Data on the number of electronic devices fitted and removed are listed by autonomous community. The number of devices does not match the number of pairs of victims and aggressors using this preventive measure, as electronic monitoring of a pair may be enabled and disabled several times during the course of a year for a variety of reasons.

The data used to compile this report have been supplied by the temporary joint venture set up between Telefónica Soluciones and Securitas Direct, which is the company that provides this service.

14. STATISTICS ON DOMESTIC AND GENDER-BASED VIOLENCE. 2014

Source: National Statistics Institute

The 2014 statistics on domestic and gender-based violence were compiled from information held in the Central Register for the Protection of Victims of Domestic and Gender-based Violence maintained by the Ministry of Justice. The statistics in this register were compiled and published by the National Statistics Institute (INE) under the partnership agreement signed between the two institutions on 3 July 2007.

The Central Register for the Protection of Victims of Domestic and Gender-based Violence contains entries on the precautionary measures and protection orders in place in cases of domestic and gender-based violence, as well as data on sentences and preventive measures imposed under final and provisional rulings on these crimes and offences.

These statistics focus on the investigatory phase of criminal proceedings (initiation of proceedings) and refer to cases in which precautionary measures have been ordered by the court. They therefore provide information about victims and reported aggressors subject to precautionary measures and protection orders, but not about convicted aggressors, sentences or preventive measures imposed under final rulings. The information provided does not include the total number of formal complaints filed, but solely those complaints that have been entered in the register as a consequence of the precautionary measures ordered by the court.

The research concentrates on cases entered in the register throughout the period under review. The information provided therefore derives from initiated proceedings that, as a consequence of the precautionary measures ordered by the court, were entered in the register in 2014.

The objectives of compiling these statistics are to ascertain the number of victims subject to precautionary measures or protection orders and the number of persons against whom formal complaints have been filed in the cases entered in the register during the year under review; to analyse victims' and aggressors' main socio-demographic characteristics (gender, age, place of birth, type of relationship); and to provide detailed information about the precautionary measures ordered by the courts and the criminal offences under investigation.

1 FATAL VICTIMS OF GENDER-BASED VIOLENCE

1 January 2003 to 31 December 2014

1.1. FATAL VICTIMS OF GENDER-BASED VIOLENCE.

This chapter analyses the information available on fatal victims of gender-based violence and their aggressors for the 2003–2014 period.

Between 1 January 2003 and 31 December 2014, a total of 766 women died at the hands of their partners or ex-partners. The highest number of fatal victims was recorded in 2008, when 76 women were murdered. In contrast, the lowest numbers of fatal victims of gender-based violence were recorded in 2014, 2012 (both with 52 fatal victims) and 2013 (54).

- This figure shows the number of confirmed fatal victims as at 31 December 2014. However, cases still in the investigatory stage at 31 December 2014 may also exist. Specifically, three cases recorded in 2014 (occurring in February, March and December of that year) were under investigation.

- Another important piece of data relative to 2014 was the number of minors who lost their mothers to gender-based violence. In that year, 41 minors were orphaned by gender-based violence. See Chapter 1.3. for further information.

Minors orphaned by gender-based violence in 2014

41

Analysing the numbers of fatal victims of gender-based violence by triennium reveals a progressive decrease since 2006–2008. In the most recent triennium (2012–2014), the number of fatal victims of gender-based violence was 15.8% lower than in the previous one.

Table 1.1. Fatal victims of gender-based violence, by triennium and percentage variation.

1 January 2003 to 31 December 2014.

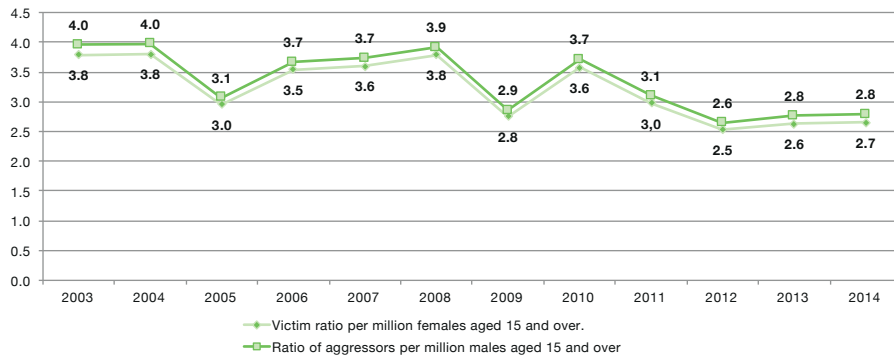

| | 2003-2005 | 2006-2008 | 2009-2011 | 2012-2014 |
|--|-----------|-----------|-----------|-----------|
| Fatal victims of gender-based violence | 200 | 216 | 190 | 160 |
| % variation on previous triennium | - | 8.0% | -12.0% | -15.8% |

Based on data from the municipal population register, and in order to compare Spain's resident population against the number of fatalities due to gender-based violence, the authors have calculated the annual ratios of aggressors and victims per million males and females aged 15 and over. The mean ratio per million aggressors in 2014 was 2.8, the same as in 2013, while that of victims was 2.7, one tenth of a percentage point above the 2013 ratio of victims per million females aged 15 and over.

Figure 1.2. Annual aggressor and fatal victim ratios per million males and females aged 15 and over.

1 January 2003 to 31 December 2014¹.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Between 2003 and 2014, the monthly mean number of fatal victims of gender-based violence stood at 5.3. The lowest monthly mean was recorded in 2012 (4.3) while the highest was recorded in 2008 (6.3). The table below shows the monthly breakdown of female fatal victims of gender-based violence, by year.

Table 1.2. Fatal victims of gender-based violence, by month and year.

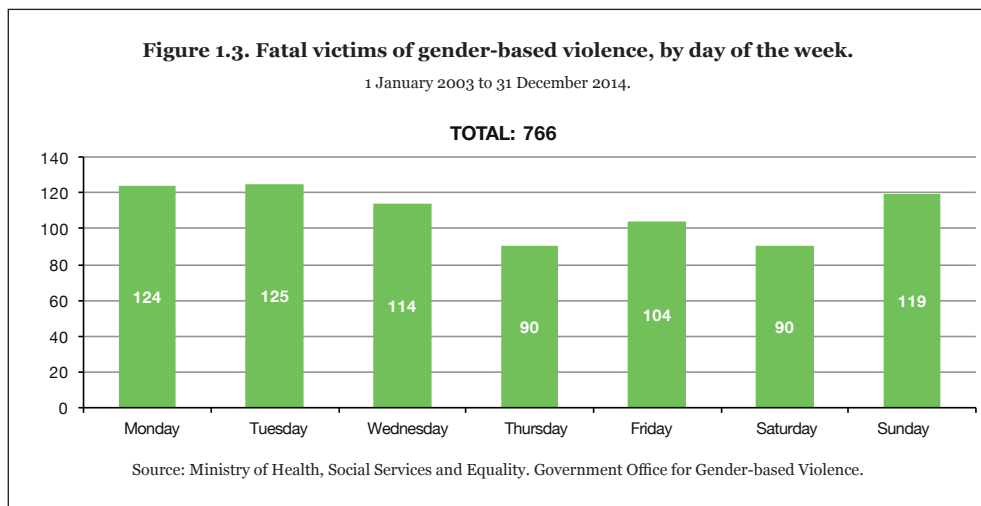

1 January 2003 to 31 December 2014.

1. The 2012 figure includes the 13-year-old female murdered in Albacete and the 2013 figure includes the 14-year-old female murdered in Lleida. Nevertheless, the ratio is calculated from the population of females aged 15 and over.

By day of the week, the number of fatal victims of gender-based violence between 1 January 2003 and 31 December 2014 breaks down as shown in the figure below.

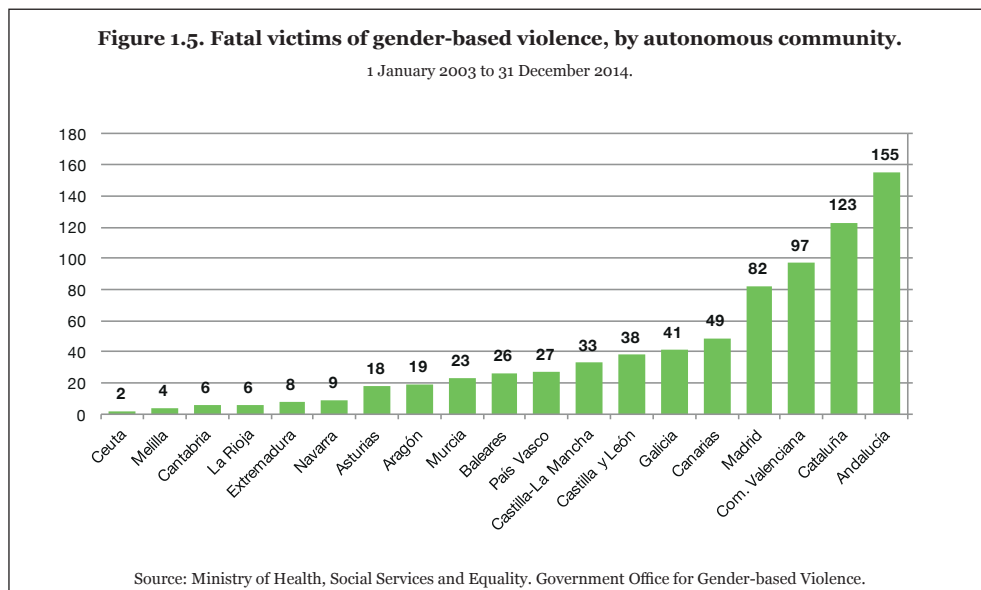

According to the mortality figures by cause of death published by Spain's National Statistics Institute, between 2003 and 2014 a total of 1.383 females aged 15 and over were murdered in Spain. The majority of these murders (55.4%) were a product of gender-based violence. In 2014, 49.1% of the women murdered in Spain were killed by their partners or ex-partners.

1.2. FATAL VICTIMS OF GENDER-BASED VIOLENCE. AUTONOMOUS COMMUNITY AND PROVINCE.

1 January 2003 to 31 December 2014.

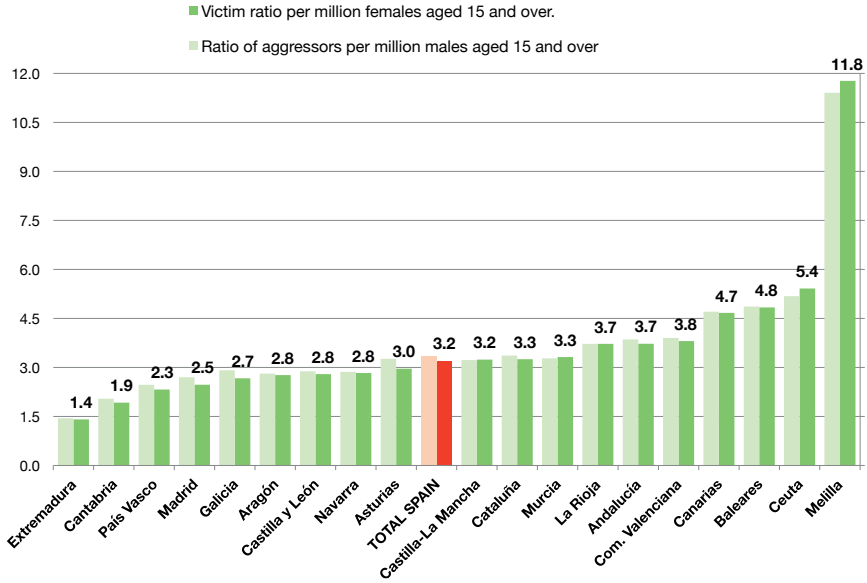

Between 2003 and 2014, the highest numbers of fatal victims of gender-based violence were recorded in Andalucía, Cataluña, Comunidad Valenciana and Madrid. Those four autonomous communities accounted for 60% of all fatal victims

The autonomous communities/cities with the highest yearly mean ratios of fatal victims and aggressors per million females and males aged 15 and over were, in rank order, Melilla, Ceuta, Baleares and Canarias.

Figure 1.6. Yearly mean ratio of female fatal victims of gender-based violence and aggressors per million females and males aged 15 and over, by autonomous community.

1 January 2003 to 31 December 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Between 2003 and 2014, the provinces with the highest numbers of fatal victims were Madrid, Barcelona and Valencia. However, the highest numbers of fatal victims per million females aged 15 and over were recorded in the autonomous city of Melilla and in the provinces of Almería and Tarragona, which exhibit the highest yearly mean ratios of female fatal victims of gender-based violence.

1.3. NUMBER OF CHILDREN OF FATAL VICTIMS OF GENDER-BASED VIOLENCE. 2013–2014.

Between 1 January 2013 and 31 December 2014, 29.6% of fatal victims of gender-based violence did not have children while 70.4% did. Specifically, 21.3% had one child; 29.6% had two children; and 19.4% had 3 or more children.

Table 1.6. Number of children of victims of gender-based violence. 2013–2014.

| | Total | 2013 | 2014 |
|------------------------|------------|-----------|-----------|
| Total | 108 | 54 | 54 |
| No children | 32 | 16 | 16 |

Between 2013 and 2014, a total of 167 children lost their mothers to gender-based violence. Of that number, 83 were minors and 65 of them lived with their mothers. Of the 84 adult children of those fatal victims of gender-based violence recorded between 2013 and 2014, 15 lived with their mothers.

Table 1.7. Number of children of victims of gender-based violence. 2013–2014³.

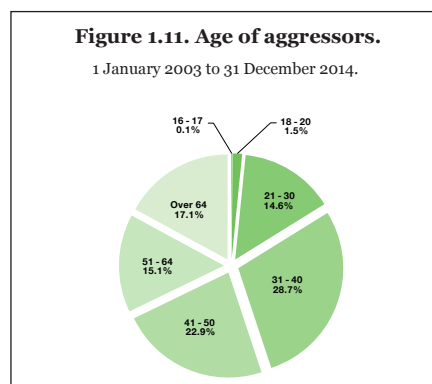

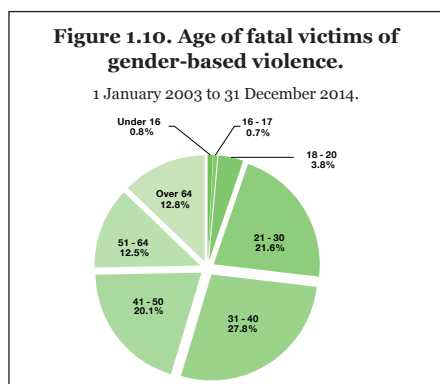

| | Total | 2013 | 2014 |
|-----------------------|------------|-----------|-----------|
| Total children | 167 | 75 | 92 |
| Minors | 83 | 42 | 41 |

3. Since 2013, the data include exhaustive information on the number of children of fatal victims of gender-based violence, distinguishing between adults and minors and indicating whether or not they lived with their mother.

1.4. AGE OF FATAL VICTIMS AND AGGRESSORS

The breakdown of victims of gender-based violence by age group between 2003 and 2014 (without taking into account the cases in which age is not recorded) reveals that 27.8% (212) of victims were aged between 31 and 40. Victims under 21 made up 5.3% (40) of the total. By aggressor age group, the largest proportion were aged between 31 and 40 (29.1%) while only 1.6% (12) were under 21.

The pyramid below shows the numbers of victims and aggressors by age group between 2003 and 2014. It only takes into account the cases in which the age group of both is known (754). It shows that more victims belonged to the younger age groups and that more aggressors belonged to the older ones.

Figure 1.12. Fatal victims of gender-based violence and aggressors. By age group.

1 January 2003 to 31 December 2014

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

In 2014, mean victim age was 47, a figure 4.7 years above the mean for 2003–2014.⁴ For aggressors, the mean age in 2014 was 49.1, equivalent to 2.8 years above the mean for the period under review.

Table 1.10. Mean age of fatal victims of gender-based violence and aggressors, by year.

1 January 2003 to 31 December 2014.

| | 2003-2014 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 |

The following figure shows how since 2005 — with the exception of 2013⁵ — the trend in mean aggressor age has been upward. The same trend is seen in mean victim age, in this case since 2008.

4. The exact age of the aggressor is known in 688 cases, and that of the victim in 751.

5. The low number of cases per year means that extreme values have a major influence on the calculations. For example, the existence of a 14-year-old victim in 2013 significantly lowered the mean age. Calculating the mean age for 2012–2014 reveals that in that time span mean victim age stood at 44.6 years while mean aggressor age stood at 48.1, both values above the means recorded in preceding years.

Figure 1.13. Mean age of fatal victims of gender-based violence and aggressors, by year.

1 January 2003 to 31 December 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

1.5. RELATIONSHIP BETWEEN FATAL VICTIMS AND AGGRESSORS

Between 1 January 2003 and 31 December 2014, the majority (61.2%) of fatal victims of gender-based violence (469 women) were murdered by their partners. A further 24% (184 women) were murdered by their ex-partners while the remaining 14.8% of fatal victims (113 women) were in the process of separating from their partners.

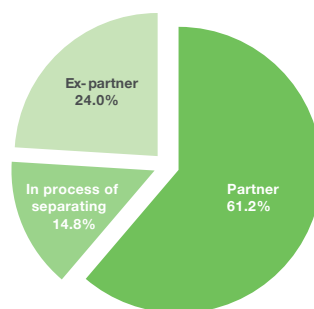

Table 1.11. Fatal victims of gender-based violence. Relationship between victim and aggressor.

1 January 2003 to 31 December 2014.

| | Total | Partner | In process of separating | Ex-partner |
|--------------|------------|------------|--------------------------|------------|
| Total | 766 | 469 | 113 | 184 |
| 2003 | 71 | 43 | 12 | 16 |

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

In 2014, victims' partners were responsible for 66.7% of deaths due to gender-based violence.⁶ In 13% of cases, the couple were in the process of separating and in 20.4% of cases the relationship had ended.

6. Throughout this section the authors use the terms 'partner' (which includes husbands, boyfriends and partners) and 'ex-partner' (which includes ex-husbands, ex-boyfriends and ex-partners) to indicate whether the aggressor was in a relationship with the victim at the time of her death (partner) or had been in one with her previously (ex-partner).

Figure 1.15. Fatal victims of gender-based violence. Relationship between victim and aggressor.

1 January 2003 to 31 December 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Breaking down the data by type of relationship between victim and aggressor⁷ reveals that between 2003 and 2014, overall 43% (329) of victims were murdered by their husbands; 25.6% (196) were murdered by their partners; 13.7% (105) were murdered by their ex-partners; 7.4% (57) were murdered by their boyfriends; 5.4% (36) were murdered by their ex-husbands; and 5% (38) were murdered by their ex-boyfriends⁸.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

7. The husband, partner and boyfriend categories include cases in which the couples were in the process of separating.

8. The authors differentiate between partner and boyfriend on the basis of whether the victim lived with her aggressor (partner) or not (boyfriend).

Figure 1.16. Relationship between victim and aggressor.

Figure 1.17. Fatal victims of gender-based violence, by cohabitation with aggressor.

1 January 2003 to 31 December 2014

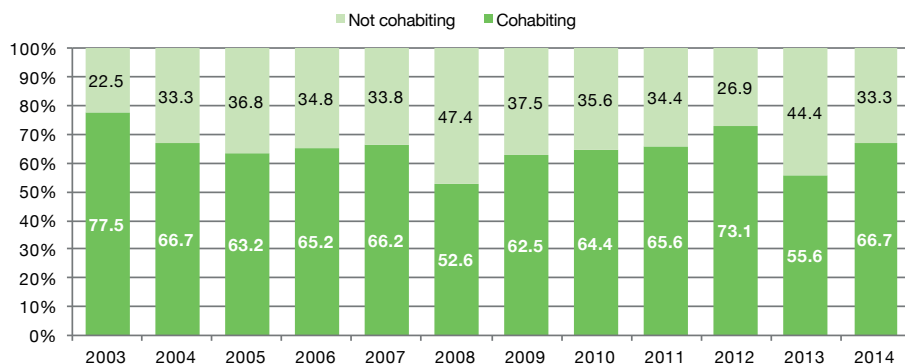

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

In 2014, 66.7% of fatal victims of gender-based violence lived with their aggressors while 33.3% lived separately.⁹

9. For the purposes of this report, the authors categorise aggressors living with their victims as either husbands or partners while aggressors who are in a relationship with their victims but do not live with them are categorised as boyfriends.

1.6. COUNTRY OF BIRTH OF FATAL VICTIMS AND AGGRESSORS.

Based on the information available on the number of fatal victims of gender-based violence, between 1 January 2003 and 31 December 2014, the aggressor was born in Spain in 516 cases and abroad in 246. In the same period, 517 of the victims were born in Spain and 246 were born abroad (the countries of birth of three victims and four aggressors are unknown). Of the total number of aggressors whose country of birth is known, 32.3% were foreign nationals, one tenth of a percentage point higher than the figure for foreign victims (32.2%).

As the figures below show, throughout the period under review the ratios of foreign-born victims and aggressors are higher than those of Spanish-born victims and aggressors. However, in recent years (despite the slight rise in the ratios of foreign-born victims and aggressors in the last two years) the gap between the ratios for Spanish-born victims and aggressors and those born abroad has narrowed progressively.

Figure 1.20. Ratio of aggressors per million males aged 15 and over, by country of birth and year.

1 January 2003 to 31 December 2014.

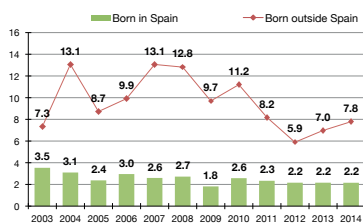

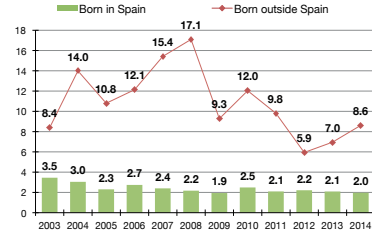

Figure 1.21. Ratio of fatal victims per million females aged 15 and over, by country of birth and year.

1 January 2003 to 31 December 2014.

While in general the ratios of Spanish-born aggressors are higher than those of Spanish-born victims, in the case of foreign-born victims and aggressors¹⁰ - with few exceptions - the ratios of victims are higher than those of aggressors.

Looking at victim-aggressor pairs, in the cases of gender-based violence resulting in death in which the country of origin of both parties is known, in the majority (461) both aggressor and victim were born in Spain (60.6%). Conversely, the cases in which both victim and aggressor were born abroad numbered 189, equivalent to 24.8% of the total. In another 110 cases, either the victim or the aggressor was born in Spain (14.4%).

Of the 516 fatal victims born in Spain for which the country of birth of their aggressor is known, 89.3% were murdered by Spanish-born aggressors and 10.7% were murdered by foreign-born aggressors. In the case of the foreign-born victims, 22.4% were murdered by Spanish-born aggressors and 76.8% died at the hands of those born abroad.

10. To calculate these ratios, gender and country of birth data as at 1 January of each year under review for all persons aged 15 and over were drawn from the municipal population register. Although foreign nationals and persons born abroad may be entered in the municipal population register irrespective of their immigration status (legal or illegal), it is feasible that immigration legislation and policy have had some influence on the variations in the figures.

Breaking down the figures by geographic region of origin reveals that the majority of murders were committed by men born in the same geographic region as the victim. In total, victim and aggressor came from the same geographic region in 628 cases, equivalent to 82.6% of all cases in which the geographic region of origin of both parties is known (760).

As indicated above, 67.8% of victims and 67.7% of aggressors were born in Spain. The second-largest group is that of victims and aggressors born in Latin America (15.5% and 13.8%, respectively), followed by that of victims and aggressors born in the European Union (8.1% and 9.2%, respectively).

Figure 1.24. Fatal victims of gender-based violence, by country of birth.

Analysing the numbers of foreign-born victims and aggressors reveals that the majority originate from Latin America (48% in the case of victims and 42.7% in the case of aggressors). The next-largest groups are those of victims and aggressors born in the European Union and in Africa, respectively. In these latter two groups, the percentages are higher among aggressors than among victims.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Information on the country of birth of both the victim and the aggressor is available in 740 cases. In 604 of these (81.6%), the victim and aggressor shared the same country of birth.

Analysis by immigration status of the women murdered between 2003 and 2014 reveals that 70% were Spanish nationals, 15.8% were legal immigrants, 2.6% were illegal immigrants, 1.4% were tourists and 6.3% were registered as having unknown immigration status.

1.7. FATAL VICTIMS OF GENDER-BASED VIOLENCE AND AGGRESSORS, BY COUNTRY OF BIRTH AND AGE GROUP. 1 January 2003 to 31 December 2014.

Previous sections have analysed total numbers of fatal victims and aggressors by country of birth and age group separately. The following figures and tables show combined information about these two variables for the 760 victims and 751 aggressors for which country of birth and age group data are available. The figure below reveals that for both victims and aggressors, those born abroad were younger than those born in Spain. Specifically, it shows that up to 40 years of age the proportions of foreign-born victims and aggressors are higher, but that after that the proportions of Spanish-born victims and aggressors are greater.

The figures below show the changes in fatal victim and aggressor age group and country of birth by triennium. The most significant figure is the one for fatal victims born in Spain, as it clearly shows a growing incidence of cases of gender-based violence among women aged over 40. This trend is not as clear among Spanish-born aggressors. However, the figure does show that in the last two triennia (2009–2011 and 2012–2014) aggressors aged under 30 — in other words, the youngest group — constituted a very small proportion of the total (4.3% and 7.2%, respectively). At the same time, it reveals that in those two triennia the proportion of aggressors aged over 40 is greater than in the first two.

Among foreign-born victims and aggressors the trends are not as clear. However the figures do show a significant decrease in both victims and aggressors aged under 30 in the last triennium (2012–2014) when compared with preceding triennia. The last triennium also shows a notable rise in the proportion of foreign-born aggressors aged over 40.

1.8. FORMAL COMPLAINTS.

1 January 2006 to 31 December 2014.

As regards legal action taken by either the victim or the victim's family and friends prior to the crime that ended the victim's life, full and consistent data are only available from January 2006 onwards.

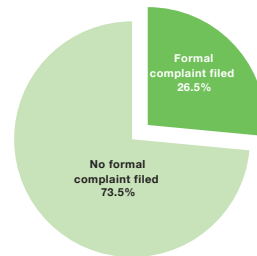

Table 1.25. Fatal victims of gender-based violence. Formal complaints.

Of the 566 fatal victims recorded between 1 January 2006 and 31 December 2014, in a total of 150 (26.5%) cases the aggressor had been reported prior to the victim's death. In 2014, this percentage stood at 31.5%.

Figure 1.31. Changes in numbers of formal complaints.

1 January 2006 to 31 December 2014.

Analysis of the differential characteristics¹¹ between fatal victims whose aggressor had been reported previously and those whose aggressor had not reveals an unequal breakdown by age group in the proportion of aggressors reported.

Table 1.26. Reported aggressors, by victim age group.

1 January 2006 to 31 December 2014.

Looking at the numbers of reported aggressors by fatal victim age group reveals that the highest proportions of aggressors were reported among victims aged between 21 and 50 (around 31%). Among victims aged over 50, the proportion of reported aggressors drops, falling to 19.5% for victims aged between 51 and 64 and to 11.4% for victims aged over 65. Notably, in the cases of the five victims aged under 18, none of the aggressors had been reported previously.

11. As mentioned at the beginning of this Annual Report, from a statistical point of view the figures worked with are low and it is therefore impossible to identify trends. Nevertheless, it is considered appropriate to try to highlight the similarities and differences in the basic characteristics of the women according to whether or not their aggressor had previously been reported (which involves comparing the information on the 133 cases in which previous formal complaints had been filed with the 379 cases in which a previous formal complaint had not been filed). For this purpose, the data from January 2006 to 31 December 2014 have been aggregated.

As regards victim country of birth by formal complaint filed, in 28.4% of cases of foreign-born female victims the aggressor had been reported, while for Spanish-born victims the figure stood at 25.5%. While the percentage of formal complaints is slightly higher among fatal victims born abroad than among those born in Spain, differences also exist among those foreign-born victims. Analysis of geographic region of origin reveals that the highest percentage of formal complaints is found among victims originating from Africa (56.7%), while none of the fatal victims originating from Asia or Oceania had previously reported their aggressor. Another difference is associated with immigration status; while the percentage of formal complaints filed by legal immigrants stands at 37.9%, only 5.6% (1) of the 18 illegal immigrants had previously reported her aggressor.

Of the total number of women murdered by their ex-partners in the period under review, in 39.4% of cases the aggressor had been reported previously. This proportion drops to 19.3% in those cases in which the victim remained in a relationship with her aggressor. Analysis by cohabitation status reveals that it was more likely for aggressors who did not live with their victim to be reported than it was for those who did (35.1% versus 21.5%, respectively).

By type of relationship, the highest percentages of prior formal complaints are found among ex-spouses (50%), while the lowest are found among victims who were dating their aggressors, as only 3 out of 43 had reported the situation (7%).

The autonomous communities with the highest percentages of formal complaints filed against aggressors between 2003 and 2014 were Cantabria (66.7%), Melilla (66.7%), Extremadura (60%) and Castilla-La Mancha (40%). In Spain's other autonomous communities the proportion of aggressors reported was below 40%.

As the table above shows, of the 566 fatal victims of gender-based violence recorded between 2006 and 2014, the aggressor had only been reported in 150 cases. Moreover, in 18 of those 150 cases (12%) proceedings were discontinued because the formal complaint was withdrawn.

Of the 150 female fatal victims of gender-based violence whose aggressors had been reported, protective measures had been requested for 121 (80.6%) of them. Of that number, protection was granted to 109 victims (90.1% of applicants) and was denied to 12 (9.9% of applicants). In addition, in two cases the victims were granted protective measures without having applied for them beforehand.

Of the 111 victims who were granted protective measures, in 80 cases those measures were in effect when the aggression that ended their lives occurred (66.1% of those who received protective measures and 14.1% of all fatal victims between 2006 and 2014).

With regard to the 80 women who had protective measures in place, the aggressor breached those measures without the victim's consent in 44 cases (55%); in 27 cases (33.8%) the aggressor did so with the victim's consent or that of members of her circle; and in the remaining 15 cases there is no data on whether consent existed or not.

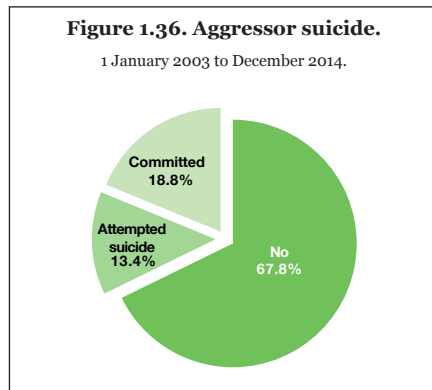

1.10. AGGRESSOR SUICIDE.

1 January 2003 to 31 December 2014.

Between 2003 and 2014, 18.8% (144) of aggressors committed suicide after murdering their partner or ex-partner while 13.4% (103) attempted suicide.

12. The data on the total number of suicides committed by males aged 15 and over are taken from the mortality figures by cause of death published by the National Statistics Institute (the most recent data available are for 2013). The data on the total number of males aged 15 and over who committed suicide after murdering their partner or ex-partner are provided by the Government Office for Gender-based Violence.

The table below shows the data for aggressor suicide and attempted suicide, broken down by key characteristics.

Table 1.34. Aggressors, by age group, country of birth, type of relationship and suicide status.

The following figure shows how as aggressor age rises, so does the percentage of aggressors who committed or attempted suicide after murdering their partners or ex-partners. The highest proportions of suicide (30.2%) or attempted suicide (17.1%) were recorded among aggressors aged over 65.

Figure 1.38. Aggressors, by age group and suicide status.

1 January 2003 to 31 December 2014.

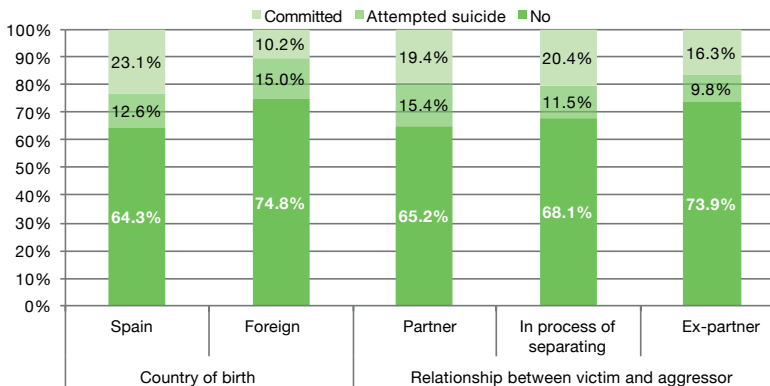

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

As regards country of birth, 23.1% of Spanish-born aggressors and 10.2% of foreign-born ones committed suicide. In addition, 12.6% of Spanish-born aggressors and 15% of foreign-born ones attempted it.

Figure 1.39. Aggressors, by country of birth, type of relationship and suicide status.

1 January 2003 to 31 December 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

The figure also reveals that the percentage of aggressors who committed or attempted suicide decreases according to the type of relationship with the victim. Thus, the proportion stands at 34.8% when they were in a relationship, at 31.9% when they were in the process of separating and at 26.1% when the relationship was over.

1.11. EMPLOYMENT STATUS AND CERTIFIED DISABILITY OF FATAL VICTIMS AND AGGRESSORS. 2014.

This year's report includes a table showing the employment status in 2014 of fatal victims and their aggressors.¹³

Table 1.35. Employment status of fatal victims of gender-based violence and of their aggressors. 2014.

| | Employment status of victim | Employment status of aggressors |
|----------------------|-----------------------------|---------------------------------|
| Total | 54 | 54 |
| Employed | 16 | 18 |
| Seeking employment | 1 | 5 |
| Unpaid domestic work | 8 | 0 |
| Student | 0 | 0 |
| Pensioner | 7 | 9 |
| Other status | 3 | 5 |
| Not known | 19 | 17 |

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Of the 54 fatal victims of gender-based violence recorded in 2014, 7.4% (4) of them had some type of certified disability.

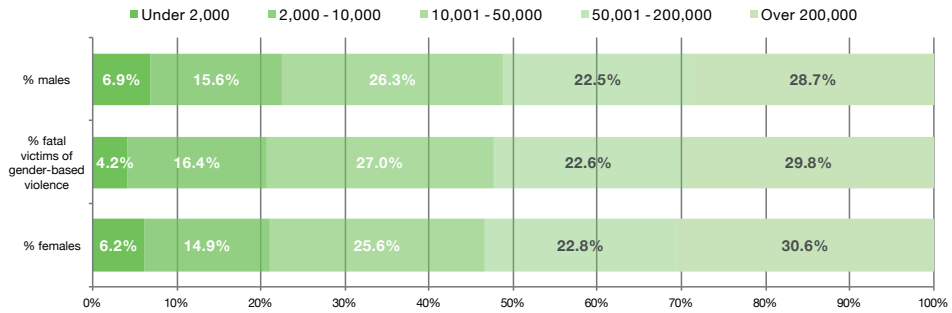

1.12. FATAL VICTIMS OF GENDER-BASED VIOLENCE AND THEIR AGGRESSORS, BY SIZE OF PLACE OF RESIDENCE. 1 January 2003 to 31 December 2014.

In towns and villages with between 2,000 and 10,000 inhabitants, the percentage of fatal victims of gender-based violence was higher than the percentage of inhabitants aged 15 and over (both males and females). Meanwhile, in villages with fewer than 2,000 inhabitants, the percentage of fatal victims of gender-based violence was lower than that of the population aged 15 and over.

13. Employment status is unknown for a very high percentage of aggressors and victims. The authors consider it necessary to compile more data on this issue in the future in order to analyse the situation.

Figure 1.40. Percentage breakdown of fatal victims of gender-based violence, by size of place of residence.

2 FORMAL COMPLAINTS OF GENDER-BASED VIOLENCE

1 January 2007 to 31 December 2014.

2.1. FORMAL COMPLAINTS OF GENDER-BASED VIOLENCE.

Between 1 January 2007 and 31 December 2014, Spain’s courts received a total of 1,052,177 formal complaints of gender-based violence. The highest number (142,125) was received in 2008.

The following figure shows changes in the total number of formal complaints received each year and the daily mean number received. In 2014, this mean stood at 347, five more than in 2013.

Since 2008, the annual number of formal complaints has fallen every year. The greatest decreases were recorded in 2009 (down 4.6% year-on-year) and 2012 (down 4.1% on 2011). In 2014, the number of formal complaints received rose again, climbing to 126,742, a 1.5% increase on the figure recorded in 2013.

Table 2.1. Formal complaints received, by year.

1 January 2007 to 31 December 2014

In the period under review, the highest ratio of formal complaints per million females and males aged 15 and over was recorded in 2008, when the figure exceeded 7,000. This ratio has decreased each year, reaching its lowest level in 2013 for both females (6,094.2 formal complaints per million females aged 15 and over) and males (6,385 formal complaints per million males aged 15 and over).

However, in 2014 this trend reversed. Just as the total number of formal complaints rose, the ratio of formal complaints per million females and males aged 15 and over increased to 6,544.7 for males and 6,225.4 for females.

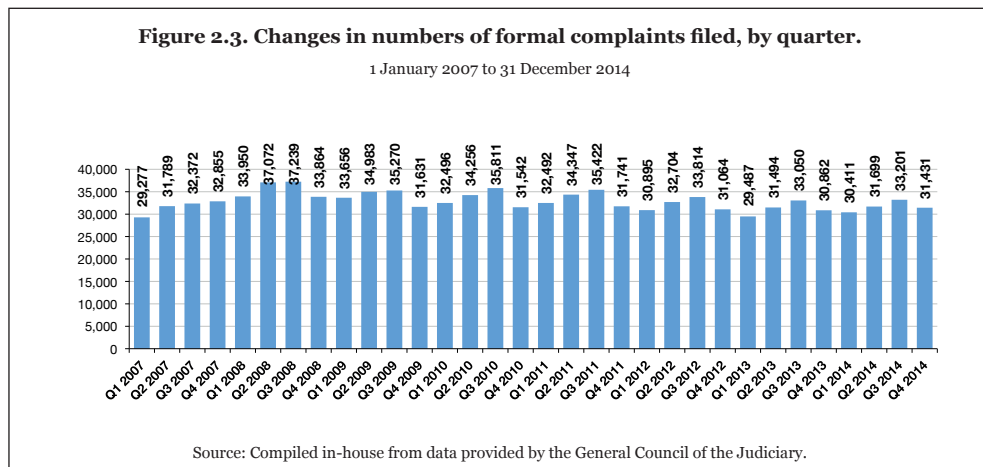

Figure 2.2. Ratio of formal complaints per million females and males aged 15 and over, by year.

1 January 2007 to 31 December 2014

Analysis of quarterly changes in the number of formal complaints between 2007 and 2014 reveals that the first quarter of 2007 saw the lowest number of formal complaints of gender-based violence (29,277), while the highest number was recorded in the third quarter of 2008 (37,239).

Similarly, in every year of the period under review the second and third quarters contain the highest numbers of formal complaints, the figure then dropping significantly in the fourth quarter of each year.

Over the period as a whole, the monthly mean number of formal complaints filed stood at 10,960, which means that between 1 January 2007 and 31 December 2014 Spain’s courts received 360 formal complaints of gender-based violence per day.

2.2. FORMAL COMPLAINTS OF GENDER-BASED VIOLENCE, BY SOURCE

Of the total number of formal complaints of gender-based violence filed between 2007 and 2014, 77.9% were submitted in the form of police reports and 11.4% were derived from injury reports. In 2014, these percentages stood at 78.2% and 11.9%, respectively. Most of the formal complaints received by the courts in the form of police reports had been filed with the police by the victims themselves.

In 2014, the number of formal complaints submitted directly by the victim fell by 20.4% in comparison with 2013 while the number submitted by social/support services and third parties in general dropped by 11.3%. Meanwhile, the number submitted in the form of police reports rose, principally in those cases in which a relative made a formal complaint (up 14% on 2013). The number of formal complaints deriving from direct-intervention police reports and from formal complaints submitted by the victim likewise climbed by 4.2% and 3.9%, respectively. The number of formal complaints deriving from injury reports and those submitted directly by relatives also rose, increasing by 4.6% and 4.2%, respectively.

Between 2007 and 2014, 72.6% of formal complaints were filed by victims of gender-based violence, doing so either via police reports or directly. Of the 763,512 formal complaints filed by victims, 87.6% were filed with the police and 12.3% with the courts.

Between 2007 and 2014, the percentage of formal complaints filed by victims shrank, decreasing from 77.4% of formal complaints made in 2007 to 69.8% in 2014. Formal complaints derived from police reports as a result of direct police intervention or filed by social/support services and third parties in general rose, increasing from 10.9% of the total in 2007 to 16.7% in 2014.

2.3. FORMAL COMPLAINTS OF GENDER-BASED VIOLENCE, BY AUTONOMOUS COMMUNITY AND PROVINCE.

By autonomous community, the courts of Andalucía and Madrid received the most formal complaints of gender-based violence in each of the years of the period under review. These two autonomous communities were followed in terms of number of formal complaints by Cataluña and Comunidad Valenciana. The formal complaints filed in these four autonomous communities accounted for 63.6% of the total. In 2014, this percentage stood at 63.2%.

In 2014, the autonomous communities with the highest ratios of formal complaints were Baleares and Melilla, which recorded between 9 and 10 formal complaints per thousand females and males aged 15 and over. Conversely, La Rioja and Extremadura had the lowest ratios, recording around four formal complaints per thousand females and males aged 15 and over.

Figure 2.7. Ratio of formal complaints of gender-based violence per million females and males aged 15 and over, by autonomous community. 2014.

Source: Compiled in-house from data provided by the General Council of the Judiciary.

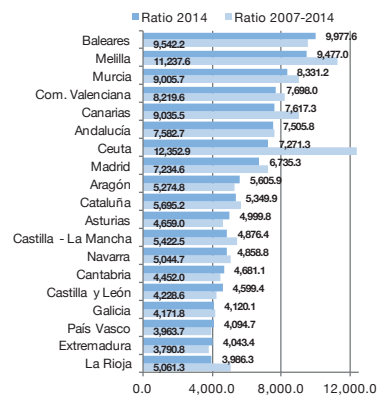

Comparing the mean ratio of formal complaints per million females aged 15 and over in 2014 with the mean ratio for the 2007–2014 period reveals that in 2014 the rate was 3.9% below the mean ratio of formal complaints per million females aged 15 and over between 2007 and 2014.

In 2014, Castilla y León and Asturias were the autonomous communities to record the greatest increases in relation to their mean ratio between 2007 and 2014.

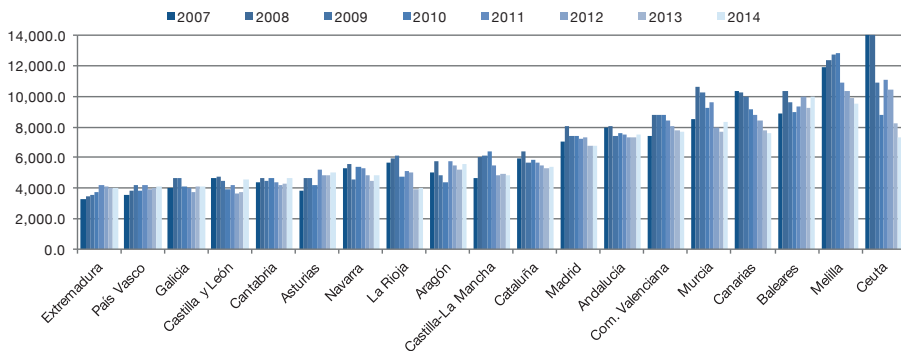

Figure 2.9. Percentage variation in the ratio of formal complaints per million females aged 15 and over in 2014 as compared against the mean ratio for 2007–2014, by autonomous community.

Source: Compiled in-house from data provided by the General Council of the Judiciary.

The figure below shows the changes in the ratios of formal complaints per million females aged 15 and over. It reveals the downward trend in formal complaint ratios in several autonomous communities (Melilla, Canarias and Comunidad Valenciana, among others). In contrast, the trend has been upward in others such as Extremadura, País Vasco and Asturias.

Figure 2.10. Annual changes in the ratio of formal complaints of gender-based violence per million females aged 15 and over, by autonomous community. 2007–2014.¹⁴

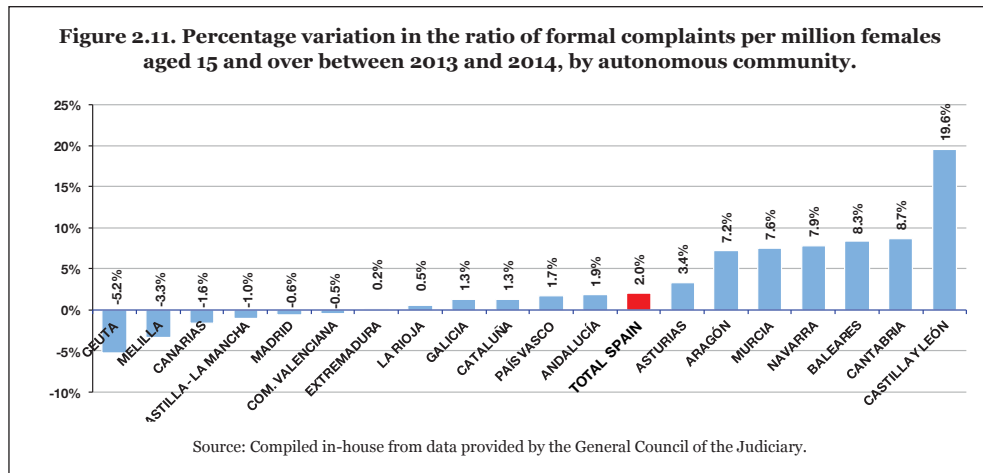

¹⁴The ratios for Ceuta for 2007 and 2008 were 19,104.7 and 24,178.3, respectively. An upper limit of 14,000 has been established to allow better display of the data for the other autonomous communities.

Source: Compiled in-house from data provided by the General Council of the Judiciary.

14. For a breakdown of the formal complaint ratios per million females aged 15 and over by autonomous community, province and year, see Table 2.12.

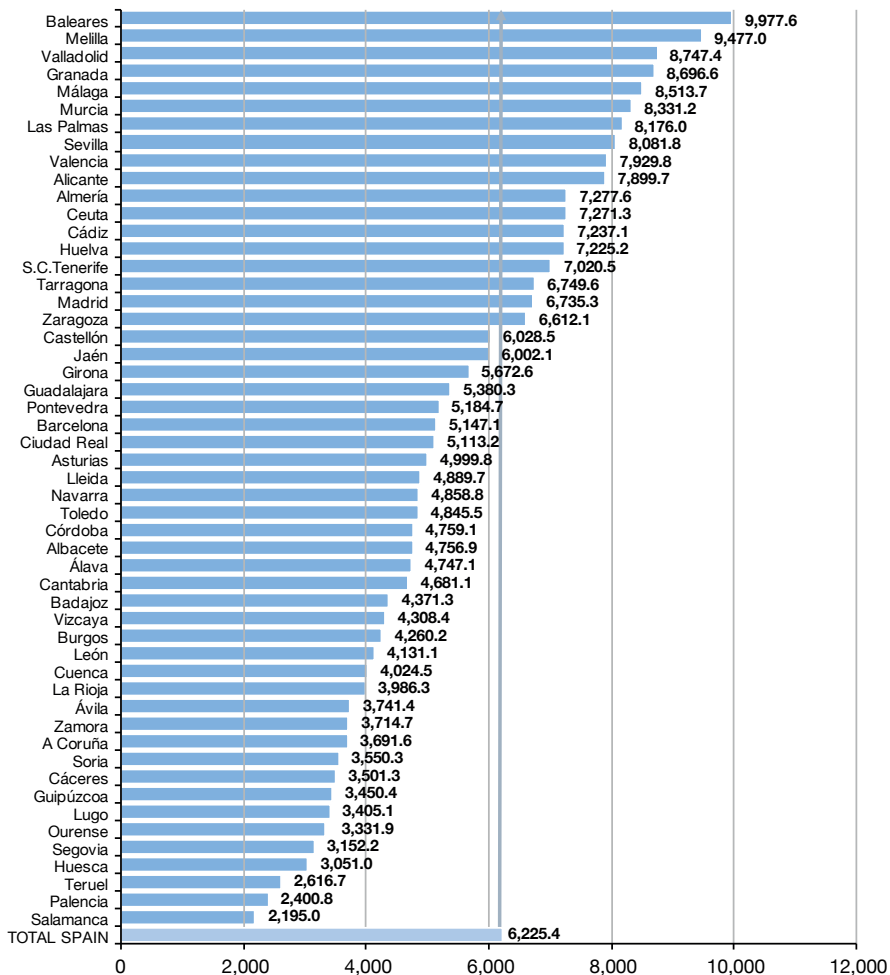

Castilla y León led the rise in number and ratio of formal complaints filed per million females aged 15 and over between 2013 and 2014 (up 19.6%). At the other end of the scale, the ratios dropped in Ceuta and Melilla by 5.2% and by 3.3%, respectively.

In 2014, the provinces with the highest ratios of formal complaints per million females aged 15 and over were Melilla and Baleares. These were followed by Málaga, Las Palmas and Granada with between 8 and 10 formal complaints per thousand females aged 15 and over. The provinces with the lowest ratios of formal complaints per million females were Salamanca, Teruel, Soria and Zamora with between 2 and 3 formal complaints per thousand females aged 15 and over.

Meanwhile, six provinces accounted for around 47% of formal complaints of gender-based violence filed in 2014: Madrid, Barcelona, Valencia, Alicante, Málaga and Sevilla, despite the fact that these provinces are only home to 31% of the female population aged 15 and over.

2.4. FORMAL COMPLAINTS OF GENDER-BASED VIOLENCE, BY AUTONOMOUS COMMUNITY, PROVINCE AND SOURCE OF COMPLAINT

The highest numbers of formal complaints filed by victims — both with the courts and with the police — were recorded in Andalucía (19,345 formal complaints in 2014 and 158,268 between 2007 and 2014). For its part, Comunidad Valenciana recorded the highest number of formal complaints deriving from police reports following direct police intervention and from

social/support services and third parties in general (3,971 formal complaints in 2014 and 31,350 between 2007 and 2014). The majority of formal complaints deriving from injury reports also originated from Andalucía (3,939 in 2014 and 32,074 between 2007 and 2014).

The following two figures show the percentage breakdown of formal complaints by source and autonomous community. The first contains the breakdown for the entire 2007–2014 period while the second contains the breakdown for 2014.

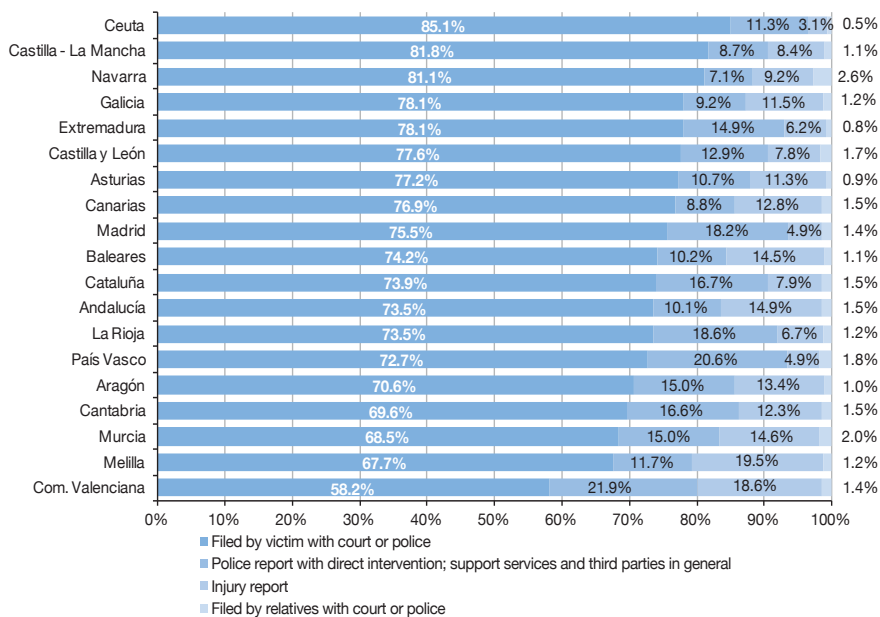

Between 2007 and 2014, the autonomous communities in which the highest proportions of formal complaints were filed by victims were Ceuta (85.1%), Castilla-La Mancha (81.8%) and Navarra (81.1%). Comunidad Valenciana was the autonomous community in which victims filed the lowest proportion of formal complaints (58.2%). The highest proportions

of formal complaints derived from police reports (as a result of direct police intervention) and from social/support services and third parties in general were recorded in Melilla (21.9%) and País Vasco (20.6%), while those of formal complaints derived from injury reports were registered in Melilla (19.5%) and Comunidad Valenciana (18.6%).

The greatest differences between 2014 and the entire 2007–2014 period were found in Cantabria and Aragón (where the percentage of formal complaints filed by victims fell considerably) and in Melilla (where the percentage rose).

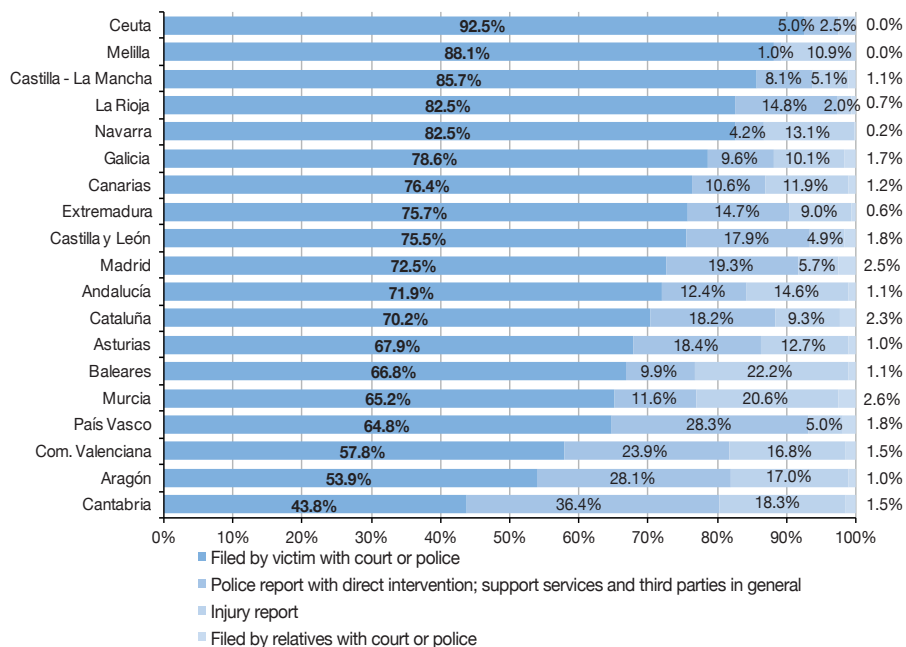

Figure 2.13. Percentage breakdown of formal complaints, by source and autonomous community.

1 January 2007 to 31 December 2014.

Source: Compiled in-house from data provided by the General Council of the Judiciary.

Figure 2.14. Percentage breakdown of formal complaints, by source and autonomous community. 2014.

Source: Compiled in-house from data provided by the General Council of the Judiciary.

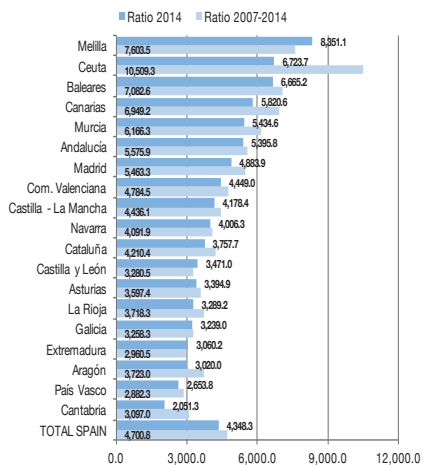

Comparing the absolute data recorded in the autonomous communities against their populations reveals that in 2014, Melilla, Ceuta and Baleares were the autonomous communities in which the highest number of victims filed formal complaints per million females aged 15 and over. Meanwhile, Asturias, Castilla-La Mancha and País Vasco were the autonomous communities in which the highest number of relatives filed formal complaints per million females aged 15 and over.

The highest ratios of formal complaints derived from police reports (as a result of direct intervention) and from social/support services and third parties in general in 2014 were found in Asturias, Baleares and Cantabria, while the highest ratios of formal complaints derived from injury reports per million females aged 15 and over were recorded in Andalucía, Extremadura and Asturias.

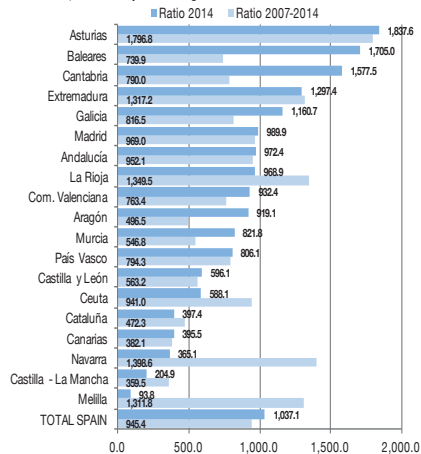

Figure 2.15. Ratio of formal complaints of gender-based violence per million females aged 15 and over, by source and autonomous community.

Mean ratio for 2007–2014 and ratio for 2014.

3 FEMALE VICTIMS OF GENDER-BASED VIOLENCE RECEIVING POLICE ASSISTANCE

Data as at 31 December 2010, 2011, 2012, 2013 and 2014.

This section analyses the data on female victims of gender-based violence receiving police assistance between 2010 and 2014. The data have been extracted from the Comprehensive Gender-based-Violence Case Monitoring System (VioGén).

Cases of gender-based violence are categorised as:

Active: Case receiving police assistance. The risk level of each active case changes over time according to the circumstances associated with it.

Each risk level (no appreciable risk, low risk, medium risk, high risk and extreme risk) is accompanied by application of police measures as per the Protocol for Police Assessment of the Level of Risk of Violence against Women under the Provisions of Organic Law 1/2004 of 28 December 2004 approved by Order 10/2007 of 10 July 2007 of the Secretariat of State for Security and amended by Order 5/2008.

For women assessed as being at low, medium, high and extreme risk, police protection increases in scope in line with the increase in risk level.

Women assessed as being at no appreciable risk receive the same level of police protection, support and assistance as any other member of the public who files a formal complaint. In particular, they receive information about their rights and the resources available to them. In addition, monitoring measures are established for these women (review of risk level every three months) and, if required, police protection is provided.

Inactive: Case that, due to its particular circumstances, is temporarily considered not to require police assistance. Inactive cases can be reactivated at any time.

As not all cases registered by the regional police forces in País Vasco and Cataluña are included, this analysis does not take into account statistical data from those two autonomous communities.

The statistical data in this analysis provide a snapshot of the situation as at the close of 31 December of each of the years reviewed (2010, 2011, 2012, 2013 and 2014).

3.1. CHANGE IN NUMBERS OF VICTIMS OF GENDER-BASED VIOLENCE RECEIVING POLICE ASSISTANCE. 31 December 2010 to 31 December 2014

Since 31 December 2010, the total number of active cases has decreased each year. Moreover, as the figure shows, the cases for which the greatest reduction occurred were those in which the victim was assessed by police as not being at risk of suffering further abuse. The number of cases in which police assessed the victim as being at some degree of risk increased slightly in the last year of the period under review.

Table 3.1. Active cases within the Comprehensive Gender-based-Violence Case Monitoring System, by risk level.

Data as at 31 December (2010-2014).

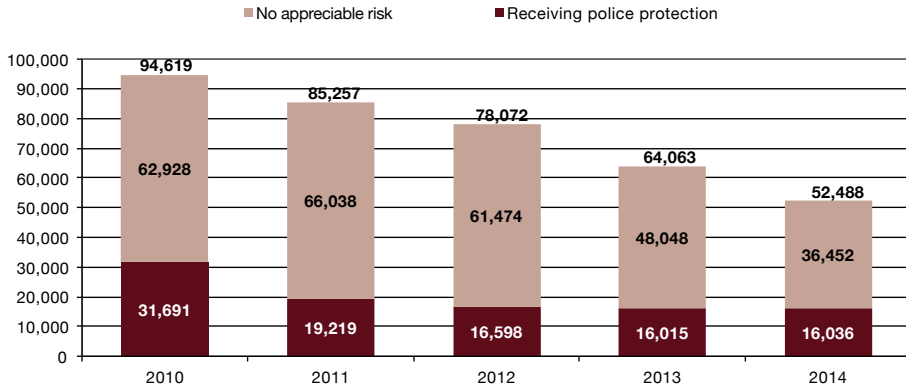

| | Active cases | | | | | | |
|------|--------------------|---------------------|-----------------------------|------------|---------|------|---------|
| | TOTAL ACTIVE CASES | Risk assessment | | | | | |
| | | No appreciable risk | Receiving police protection | Risk level | | | |
| | | | | Low | Average | High | Extreme |
| 2010 | 94,619 | 62,928 | 31,691 | 25,193 | 6,118 | 361 | 19 |
| 2011 | 85,257 | 66,038 | 19,219 | 15,263 | 3,742 | 192 | 22 |
| 2012 | 78,072 | 61,474 | 16,598 | 13,361 | 3,098 | 131 | 8 |
| 2013 | 64,063 | 48,048 | 16,015 | 13,035 | 2,859 | 113 | 8 |
| 2014 | 52,488 | 36,452 | 16,036 | 13,092 | 2,820 | 116 | 8 |

Source: Compiled in-house from data provided by the Ministry of the Interior.

Of the 52,488 cases registered as at 31 December 2014, in 16,036 of them some level of risk was identified. Consequently, those victims of gender-based violence not only received police assistance but were also provided with protection.

Figure 3.1. Active cases within the Comprehensive Gender-based-Violence Case Monitoring System, by risk level.

Data as at 31 December (2010-2014).

Source: Compiled in-house from data provided by the Ministry of the Interior.

As at 31 December 2014, the ratio of female victims of gender-based violence receiving police assistance per million females aged 15 and over resident in Spain (with the exceptions of Cataluña and País Vasco) stood at 3,251.5

Based on police risk assessment figures, for every million females in this country, 993.4 were at risk of suffering further abuse. Of that number, 811.0 were assessed as being at low risk, 174.7 at medium risk and 7.7 at high or extreme risk.

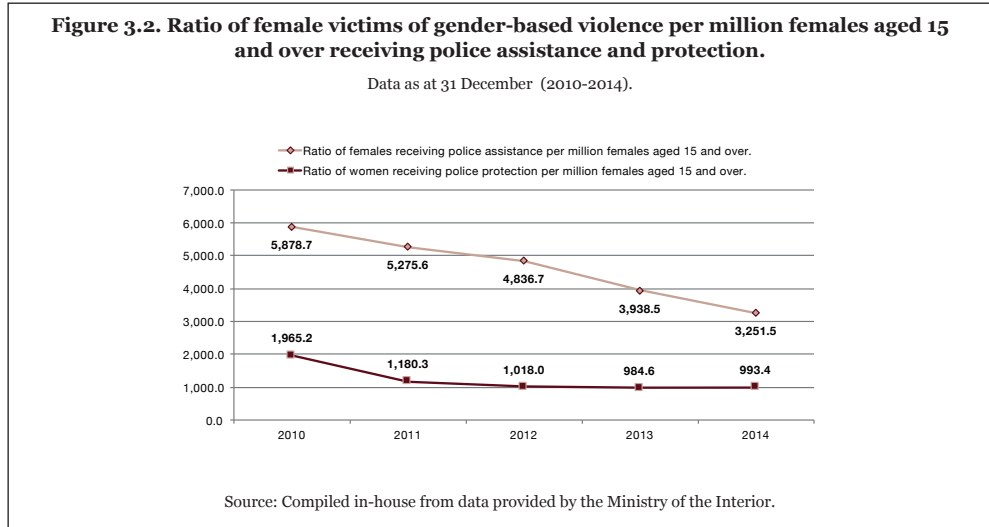

Table 3.2. Female victims of gender-based violence assessed by police. Absolute data and ratio per million females aged 15 and over.

Data as at 31 December 2014.

| | | Victims of gender-based violence | Ratio per million females aged 15 and over | Ratio per million males aged 15 and over | Vertical% |
|------------------------------------|----------------|----------------------------------|--|--|--------------|
| Assessed cases | | 52,488 | 3,251.5 | 3,416.3 | 100.0 |
| No appreciable risk | | 36,452 | 2,258.1 | 2,372.6 | 69.4 |
| Receiving police protection | Total | 16,036 | 993.4 | 1,043.7 | 30.6 |
| | Low | 13,092 | 811.0 | 852.1 | 24.9 |
| Risk level | Average | 2,820 | 174.7 | 183.5 | 5.4 |
| | High | 116 | 7.2 | 7.6 | 0.2 |
| | Extreme | 8 | 0.5 | 0.5 | 0.0 |

Source: Compiled in-house from data provided by the Ministry of the Interior.

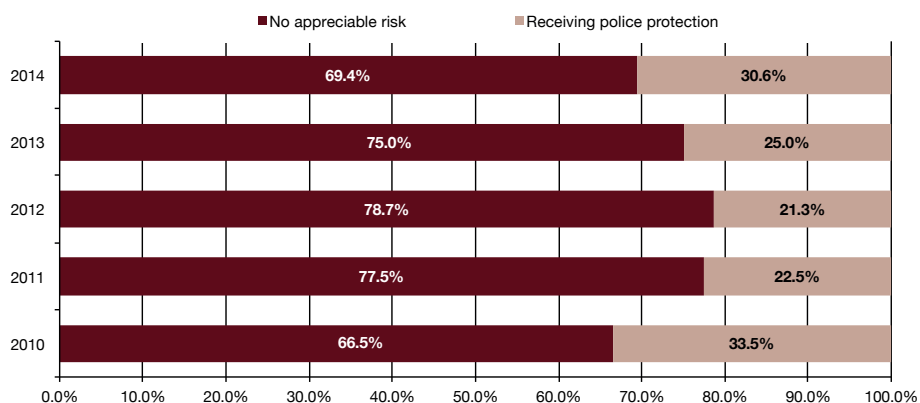

The figure below shows changes in the ratios compared with preceding years. Although the ratio of female victims of gender-based violence receiving police assistance fell from 2010 onwards, the ratio of females receiving police protection rose slightly in 2014.

Based on the percentage breakdown shown in the figure below, it may be concluded that in 2014 in 69.4% of cases of gender-based violence (36,452 women) no appreciable risk of further abuse was identified. Monitoring measures were established for these women and, if required, police protection was provided. In the remaining 30.6% (16,036 women) of cases of gender-based violence, the women were assessed as being at risk (either low, medium, high or extreme) of suffering further abuse. For these women, police protection increased in scope in line with the increase in risk level.

Figure 3.3. Percentage breakdown of female victims of gender-based violence receiving police assistance, by risk level.

Data as at 31 December (2010–2014).

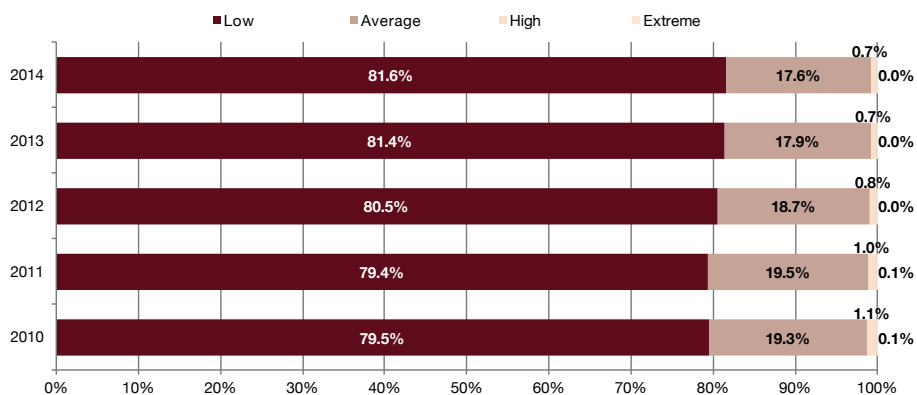

Source: Compiled in-house from data provided by the Ministry of the Interior.

As at 31 December 2014, 81.6% of female victims of gender-based violence receiving police protection (13,092 women) were assessed as being at low risk, 17.6% (2,820 women) were assessed as being at medium risk and around 0.8% were assessed as being at high or extreme risk (116 and 8 women, respectively).

Figure 3.4. Percentage breakdown of female victims of gender-based violence receiving police protection, by risk level.

3.2. SOCIO-DEMOGRAPHIC CHARACTERISTICS OF FEMALE VICTIMS OF GENDER-BASED VIOLENCE RECEIVING POLICE ASSISTANCE AND PROTECTION.

The largest proportion of female victims of gender-based violence receiving police assistance as at 31 December 2014 was aged between 31 and 45 (45.6%). Those aged under 31 accounted for 28.5% of the total while those aged over 45 represented 25.8%.

These percentages vary slightly when it comes to female victims of gender-based violence receiving police protection, as although the proportion of victims aged between 31 and 45 barely changes, for those under 31 it increases by 1.4 points (29.9% of the total number of female victims receiving police assistance).

Table 3.3. Female victims of gender-based violence receiving police assistance and protection, by age group. Absolute data and vertical percentages.

Data as at 31 December 2014.

| | Victims receiving police assistance | | Victims receiving police protection | |
|--------------------------|-------------------------------------|-----------|-------------------------------------|-----------|
| | Number | Vertical% | Number | Vertical% |
| Total | 52,488 | 100.0 | 16,036 | 100.0 |
| 14 - 17 | 402 | 0.8 | 178 | 1.1 |
| 18 - 30 | 14,565 | 27.8 | 4,613 | 28.8 |
| 31 - 45 | 23,947 | 45.6 | 7,291 | 45.5 |
| 46 - 64 | 12,349 | 23.5 | 3,626 | 22.6 |
| Over 65 years old | 1,209 | 2.3 | 322 | 2.0 |
| Not known | 16 | - | 6 | - |

Figure 3.5. Percentage breakdown of female victims of gender-based violence receiving police assistance, by age group.

Data as at 31 December 2014.

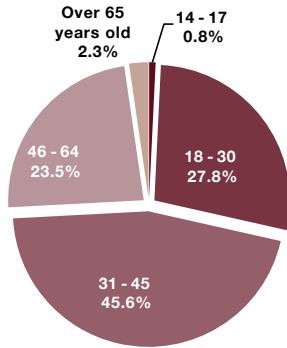

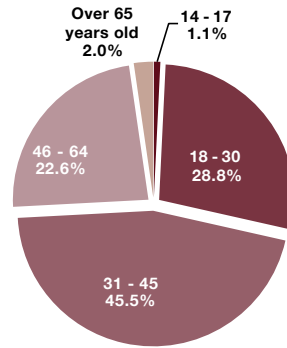

Figure 3.6. Percentage breakdown of female victims of gender-based violence receiving police protection, by age group.

Data as at 31 December 2014.

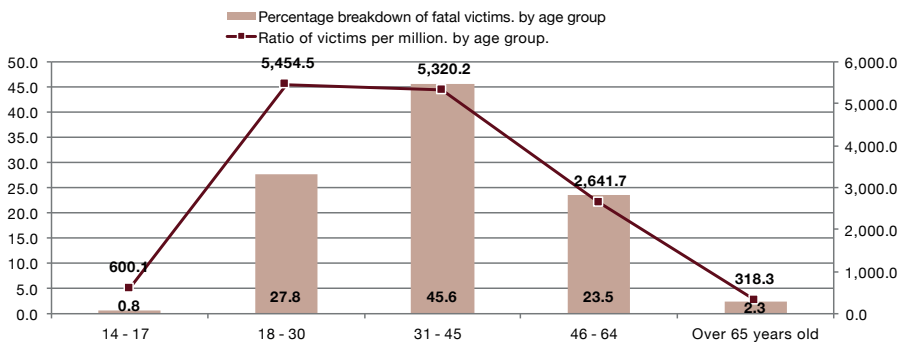

Source: Compiled in-house from data provided by the Ministry of the Interior.

The figures below show that although the highest percentages of victims receiving police assistance and protection were found in the 31–45 age group, comparing the absolute data against the population broken down by age group reveals that incidence was greater among victims aged between 18 and 30¹⁵.

Figure 3.7. Percentage breakdown and ratio of victims receiving police assistance per million females, by age group.

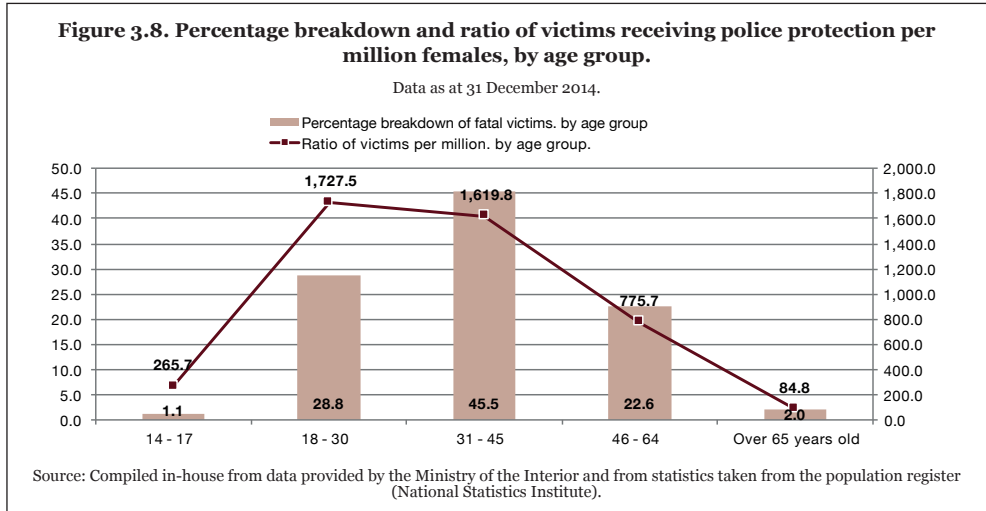

Data as at 31 December 2014.

Source: Compiled in-house from data provided by the Ministry of the Interior and from statistics taken from the population register (National Statistics Institute).

15. To calculate the ratios, the authors have used the number of female victims of gender-based violence receiving police assistance and/or protection and the total female population, broken down by age group, resident in Spain (with the exceptions of País Vasco and Cataluña).

The ratio is also higher among minor victims of gender-based violence than among those aged 65 and over, both as regards women receiving police assistance and those receiving police protection.

Analysing the breakdown of female victims of gender-based violence receiving police assistance by age group and risk level reveals that, except in cases of extreme risk, as the risk level rises so does the percentage of victims aged under 45 while that of those aged over 45 falls. Thus, while among victims assessed as being at no appreciable risk those aged under 46 account for 73.6% of cases, among those assessed as being at high risk the percentage climbs to 81.0%.

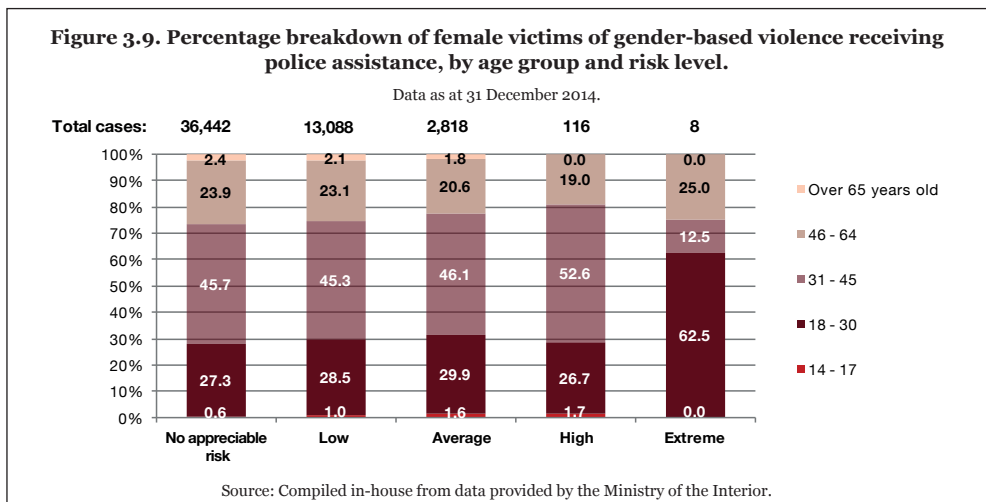

Table 3.4. Female victims of gender-based violence receiving police assistance, by country of birth and risk level.

Data as at 31 December 2014.

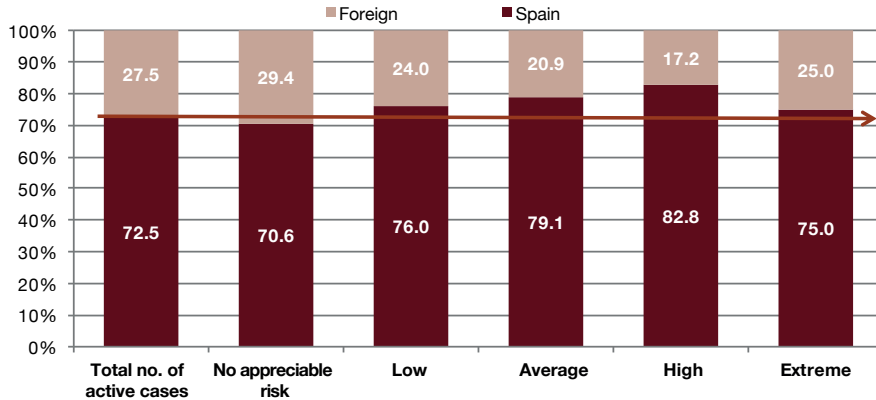

| | Total no. of active cases | No appreciable risk | Low | Average | High | Extreme |
|----------------|---------------------------|---------------------|--------|---------|------|---------|
| Total | 52,488 | 36,452 | 13,092 | 2,820 | 116 | 8 |
| Spain | 38,029 | 25,741 | 9,956 | 2,230 | 96 | 6 |
| Foreign | 14,459 | 10,711 | 3,136 | 590 | 20 | 2 |

3.3. FEMALE VICTIMS OF GENDER-BASED VIOLENCE RECEIVING POLICE ASSISTANCE AND PROTECTION, BY AUTONOMOUS COMMUNITY AND PROVINCE

Year-on-year changes in this indicator varied according to autonomous community. The greatest falls in the total number of women receiving police assistance were recorded in Madrid (-35.1%), Aragón (-21.9%) and Baleares (-20.8%), in all of which negative growth exceeded 20%. In fact, the total number of women receiving police assistance only rose year-on-year in Ceuta (2.2%) and Cantabria (1.6%).

Table 3.5. Female victims of gender-based violence receiving police assistance. Year-on-year variation (%).

Figure 3.12. Female victims of gender-based violence receiving police protection and ratio per million females aged 15 and over, by autonomous community.

Data as at 31 December 2013 and 2014.

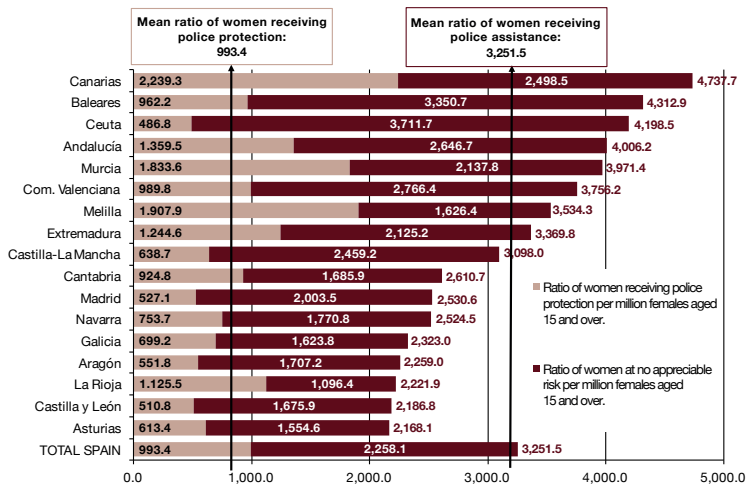

Source: Compiled in-house from data provided by the Ministry of the Interior.

Comparing the number of women assessed by police against the female population aged 15 and over in Spain's various autonomous communities reveals that as at 31 December 2014, Canarias (4,737.7), Baleares (4,312.9), Ceuta (4,198.5) and Andalucía (4,006.2) were, in that order, the ones with the highest ratios of female victims of gender-based violence per million females. At the other end of the scale, the lowest ratios were found in Asturias (2,168.1), Castilla y León (2,186.8) and La Rioja (2,221.9).

The order in which the various autonomous communities are ranked changes when the ratio of victims at risk of suffering further abuse (and therefore receiving police protection) is taken into account. Thus, as at 31 December 2014, the autonomous communities with the highest ratios of victims of gender-based violence per million females aged 15 and over were Canarias (2,229.3), Melilla (1,907.9) and Murcia (1,833.6).

At that same date, the autonomous communities/cities of Ceuta, Castilla-La Mancha, Madrid, Baleares, Castilla y León and Aragón recorded the lowest percentages of women at risk (low, medium, high or extreme) as a proportion of the total number of women assessed in each of them. In all these autonomous communities/cities the proportion was below 25%. Melilla, La Rioja, Canarias and Murcia came at the other end of the scale, with the percentage of women assessed as being at risk exceeding 45% in all of them.

Source: Compiled in-house from data provided by the Ministry of the Interior.

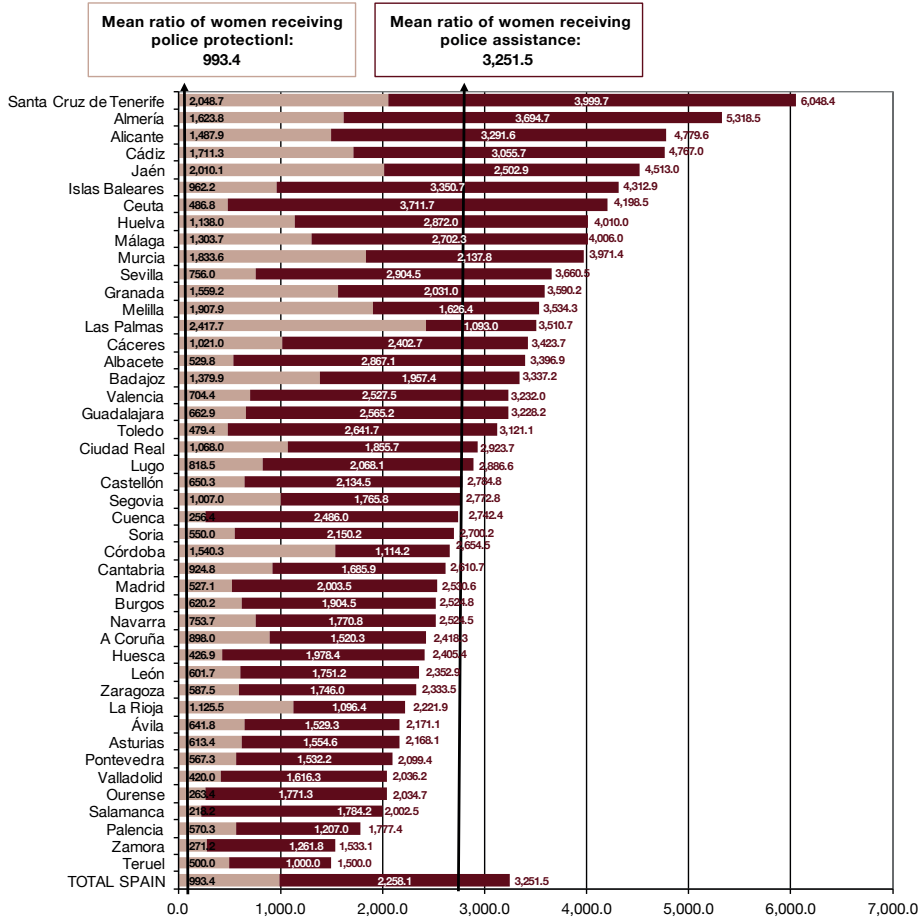

Looking at the data at provincial level reveals that the provinces with the highest ratios of female victims of gender-based violence receiving police assistance per million females aged 15 and over were Santa Cruz de Tenerife (6,048.4), Almería (5,318.5), Alicante (4,779.6) and Cádiz (4,767.0).

Meanwhile, Las Palmas de Gran Canaria (2,417.7), Santa Cruz de Tenerife (2,048.7) and Jaén (2,010.1) were the provinces with the highest ratios of female victims of gender-based violence receiving police protection per million females aged 15 and over.

In contrast, the provinces with the lowest ratios of female victims of gender-based violence receiving police assistance were Teruel (1,500.0), Zamora (1,533.1) and Palencia (1,777.4). Those with the lowest ratios of female victims of gender-based violence receiving police protection per million females were Salamanca (218.2), Cuenca (256.4) and Ourense (263.4).

4 JUDICIAL DATA ON GENDER-BASED VIOLENCE.

Data as at 31 December 2014

4.1. COURTS AUTHORISED TO DEAL WITH CASES OF VIOLENCE AGAINST WOMEN

As at 31 December 2014, Spain had 461 courts authorised to deal with cases of violence against women. Of that number, 106 were specialised courts dealing exclusively with violence against women and 355 were non-exclusive courts authorised to try such cases.

Table 4.1: Breakdown of Spain's courts (exclusive and non-exclusive) dealing with violence against women, by autonomous community.

Andalucía is the autonomous community with the most non-exclusive authorised courts (73), while Madrid is the one with the most exclusive courts (23). Furthermore, Madrid was the only autonomous community with more specialised courts dealing exclusively with violence against women (74.19%) than non-exclusive courts authorised to do so (25.81%). This can be explained by the number of jurisdictions in each autonomous community, as well as by population size and density.

Since Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence, came into force, every jurisdiction has at least one specialised court authorised to deal with such cases.

4.2. SPECIALISATION IN GENDER-BASED VIOLENCE IN OTHER COURTS: CRIMINAL COURTS AND CRIMINAL COURTROOMS OF PROVINCIAL COURTS. BREAKDOWN BY AUTONOMOUS COMMUNITY.

Additional Provision 10, Section 3(a), of Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence, amended Article 89(a) of Organic Law 6/1985 of 1 July 1985 on the judiciary (hereinafter the LOPJ), to allow for some criminal courts to specialise in gender-based violence in order to hear cases brought by the courts for violence against women.

These specialised courts can be authorised to prosecute and pass judgement on breach of sentence and to impose protective measures in cases of violence against women should the case-load of the criminal courts at the corresponding courthouses so recommend.

Furthermore, in accordance with Articles 82.1.3 and 82.2.4 of the LOPJ, amended by Articles 45 and 46 of Organic Law 1/2004, designated criminal, civil or combined courtrooms at provincial courts can be assigned exclusive responsibility for hearing cases of violence against women. Specifically, they can be assigned exclusive responsibility for hearing appeals against criminal and civil rulings by the courts for violence against women and by the criminal courts in matters of gender-based violence, as established under the aforementioned Law. Likewise, they can be assigned responsibility for hearing all cases in which prosecution in the first instance in proceedings brought by courts for violence against women (except cases subject to trial by jury) corresponds to the provincial court.

Table 4.4. Specialised criminal courts and specialised criminal courtrooms in provincial courts, by autonomous community.

4.3. LEGAL AID

The law on measures to provide comprehensive protection against gender-based violence establishes creation of specific legal aid for victims of gender-based violence.

The data in the table below on the number of women receiving advice under the legal aid system refer solely to the territory administered by the Ministry of Justice. It should be noted in this respect that powers over the administration of justice were transferred to Asturias in 2006, to Aragón and Cantabria in 2008 and to La Rioja in 2011.

Within the territory under its jurisdiction, the Ministry of Justice funds the legal aid service via quarterly subsidies issued to the General Council of Spanish Lawyers (CGAE), which distributes the aid to the country's colleges of lawyers which, in turn, make payments to the lawyers who have provided the corresponding services, as regulated by Articles 37 et seq. of Law 1/1996 of 10 January 1996 on provision of legal aid, and by the regulations governing legal aid.

The amount paid for the service provided depends on the fee schedule set either by the Ministry of Justice or, in the cases in which the power to administer justice locally has been devolved, by the regional government.

Table 4.5. Female victims of gender-based violence receiving legal aid. 2004–2014.

| YEAR | NUMBER OF WOMEN ADVISED | TOTAL PAYMENTS |
|--------------|-------------------------|---------------------|
| TOTAL | 79,111 | 17,762,245 € |

4.4. COMPREHENSIVE FORENSIC ASSESSMENT UNITS

These units, created by additional provision two of Organic Law 1/2004, of 28 December 2004, are responsible for assisting the courts by performing clinical and psycho-social assessment of victims and aggressors.

Each Institute of Forensic Medicine (IFM) within the territory administered by the Ministry of Justice has a comprehensive forensic assessment unit (CFAU). Although an IFM has not yet been created in Ceuta and Melilla, a CFAU was set up there in 2013.

Composition of comprehensive forensic assessment units varies between autonomous communities depending on the number of IFMs, provinces, staffing requirements, etc. Although they have not been constituted in every autonomous community (Madrid's Institute of Forensic Medicine has not been put into operation), they do all have psychologist–social worker teams and forensic physicians who deal with cases of gender-based violence for all the courts within their jurisdiction.

Within the territory administered by the Ministry of Justice, these units comprise a forensic physician (who acts as coordinator) and one or more psychologist–social worker teams. They are located in the provincial capitals

and, in some cases, in other major towns and cities as well. In 2014, a total of 24 psychologist–social worker teams were in operation, staffed by 25 psychologists, 25 social workers and the corresponding forensic physicians assigned to them.

The table below lists the comprehensive forensic assessment units and the staff assigned to them both within the territory administered by the Ministry of Justice and in the autonomous communities in which those powers have been devolved.

4.5. VICTIMS OF GENDER-BASED VIOLENCE UNDER PROTECTION ORDER ASSISTED BY VICTIM SUPPORT OFFICES, BY AUTONOMOUS COMMUNITY. 2014.

Victim Support Offices, created by Law 35/1995 and located at courthouses, provide assistance to victims of violent crime. One of their principal functions is to assist victims of gender-based violence.

A specific action protocol for Victim Support Offices was drawn up under additional provision two of Organic Law 1/2004 (included in Annex 6 of the Handbook on Comprehensive Forensic Assessment of Gender-Based and Domestic Violence).

Under this protocol, the offices assess and assist higher-risk victims to minimise the likelihood of further abuse. This task is carried out in co-ordination with the various services assisting victims in their place of residence.

This protocol addresses six action areas:

1. Assessment of the consequences of domestic and/or gender-based violence for the victim.
2. Assessment of the environment in which violence occurs.
3. Assessment of the risk of further abuse of the victim.
4. Provision of psychological support for the victim.
5. Assessment of the family environment (children and other relatives).
6. Assessment, in cases resulting in death, of the impact on indirect victims.

Psychological support is provided through counselling in the following areas: explanation of the cycle of violence; analysis of the consequences of violence for the health of the victim receiving support; analysis of coping strategies used so far and learning of new ones; learning of processes to strengthen decision-making; cognitive restructuring of the sense of guilt about the consequences of filing a formal complaint and raising of self-esteem; and learning of relaxation techniques.

Likewise, when specific counselling services for minors are not available in the town, city or autonomous community of residence, the minors are offered assessment, counselling and support.

The Victim Support Offices draw up specialised individual, general, coordinated and multidisciplinary action plans that set out the many forms of support each victim needs. These Action Plans are characterised as follows:

- They are developed in stages throughout the process — admission/guidance, information, intervention and monitoring.
- They are comprehensive and span legal, psychological, economic and social support.

- They are coordinated, as support can also be provided by other services (with monitoring by the Victim Support Offices).

Table 4.9. Number of victims under protection orders assisted by Victim Support Offices reporting to the Ministry of Justice in 2014.

Source: Ministry of Justice

The majority of victims are supported by both the caseworker and the psychologist. In general, the victims supported by the psychologist have previously been seen by the caseworker. Psychological support can continue for up to 20 sessions and on occasion may continue into the following year.

Table 4.10. Number of victims under protection orders assisted by Victim Support Offices (caseworker and psychologist). 2005–2014.

| YEARS | 2005 ⁽¹⁾ | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 ⁽²⁾ | 2013 ⁽³⁾ | 2014 |

■ 2005 to 2007 Castilla-La Mancha, Castilla-León, Extremadura, Murcia, Ceuta, Melilla, La Rioja, Aragón, Asturias and Cantabria.

■ 2008 to 2011 Castilla-La Mancha, Castilla-León, Extremadura, Murcia, Ceuta, Melilla and La Rioja.

■ 2012 to 2014 Castilla-La Mancha, Castilla-León, Extremadura, Murcia, Ceuta, Melilla and Illes Balears.

(1) No data are available for 2005, as the Law came into effect in January 2005 and time was needed to adapt the information-gathering and statistics compilation procedures.

(2) Compilation of statistics at Victim Support Offices in Illes Balears started in the second quarter of 2012.

(3) It should be noted that in mid-2013 and early 2014 the instructions on how statistics should be compiled were modified, which means that the data are not strictly comparable.

4.6. CREATION OF POSTS OF PUBLIC PROSECUTOR EXCLUSIVELY RESPONSIBLE FOR CASES OF VIOLENCE AGAINST WOMEN.

Article 70 of Organic Law 1/2004 of 28 December 2004 establishes appointment of “a Public Prosecutor for Violence against Women”.

Creation of the new post of Deputy Public Prosecutor for Violence against Women resulted in amendment of the By-laws of the Public Prosecutor’s Office (Law 50/1981 of 30 December 1981) to include a new section (d) in Article 18 with the same content as Article 70 of Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence.

The Public Prosecutor for Violence against Women was appointed by Royal Decree 872/2005 of 15 July 2005 and subsequent renewal of the post was approved by Royal Decree 1369/2010 of 29 December 2010.

Article 71 of Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence, envisages that each Public Prosecutor’s Office at both the High Courts of Justice and at the provincial courts shall hold a Court for Violence against Women.

For its part, Article 72 of Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence, regulates creation of the posts of Deputy Public Prosecutor for Violence against Women within each Provincial Public Prosecutor’s Office.

To adapt the law to the amended By-laws of the Public Prosecutor's Office, implemented by Law 24/2007 of 9 October 2007, the articles were amended and a new structure was created in accordance with above-mentioned Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence.

Thus, Article 20 regulates creation of a Public Prosecutor for Violence against Women who will perform the following functions:

- a) *Conduct the proceedings referred to in Article 5 of the By-laws of the Public Prosecutor's Office and intervene directly in criminal proceedings considered pertinent by the Director of Public Prosecutions relating to crimes of gender-based violence as set out in Article 87.c.1 of the Organic Law on the judiciary.*
- b) *Intervene, if delegated by the Director of Public Prosecutions, in civil proceedings as set out in Article 87.c.2 of the Organic Law on the judiciary.*
- c) *Oversee and coordinate the actions of the Courts for Violence against Women and compile reports on the same, relaying the findings to the Public Prosecutor of the Public Prosecutor's Offices to which they are attached.*
- d) *Coordinate the criteria followed by the various Public Prosecutor's Offices in cases of gender-based violence, proposing appropriate orders for issue by the Director of Public Prosecutions.*
- e) *Produce and submit to the Director of Public Prosecutions, every six months and for subsequent submission to the Council of Public Prosecutors of the Supreme Court and to the Prosecutorial Council, a report on the proceedings monitored and actions carried out by the Public Prosecutor's Office in the domain of gender-based violence.*
To ensure performance of the above, the Public Prosecutor for Violence against Women shall be assigned all permanent and temporary staff and experts necessary.

The Public Prosecutor's Office of the Special Court for Violence against Women is assigned two public prosecutors as per Article 36, points 1 and 3, of the By-laws of the Public Prosecutor's Office. These shall be appointed by the Director of Public Prosecutions and appointment shall be conditional upon compliance with the requirements stated in the provision.

Appointment of these prosecutors was carried out by Royal Decree 219/2010 of 1 March 2010 and Royal Decree 558/2014 of 27 June 2014, respectively.

The courtrooms of the provincial courts envisaged in Article 71 of Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence, are also envisaged in Article 18(3) of the By-laws of the Public Prosecutor's Office, which state: "Likewise, Provincial Public Prosecutor's Offices shall hold a Court for Violence against Women which shall either coordinate or directly intervene on behalf of the Public Prosecutor's Office in criminal and civil proceedings that Courts for Violence Against Women are authorised to hear."

There are 50 Deputy Public Prosecutors for Violence against Women attached either to the High Public Prosecutor's Offices (in the case of single-province offices) or to Public Prosecutor's Offices of provincial courts, one for each province within Spanish territory.

Independently, and according to the size of the staff of the Public Prosecutor's Office and the number of Courts for Violence against Women in existence, each Provincial Court for Violence against Women may have, in addition to the Deputy Public Prosecutor, an indeterminate number of prosecutors responsible for conducting the proceedings of the Courts for Violence against Women.

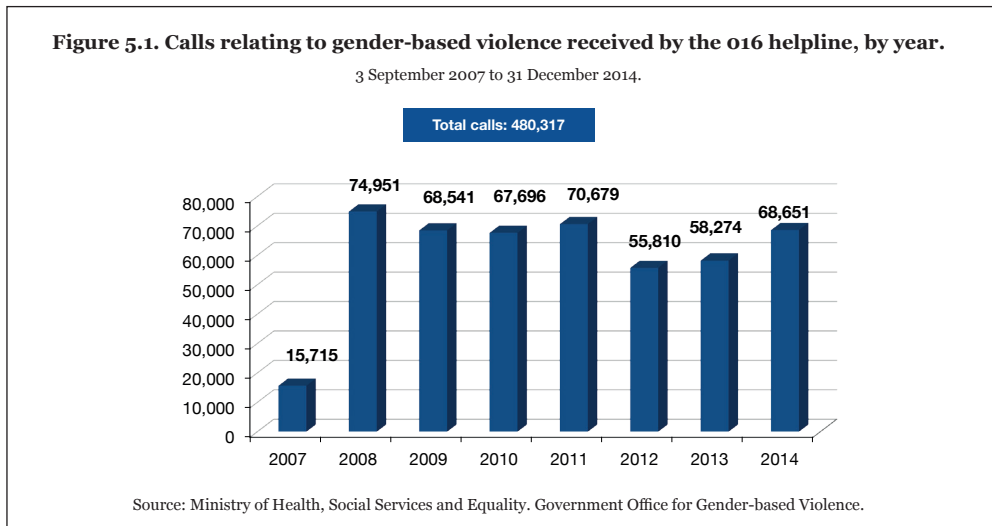

In other Provincial Public Prosecutor's Offices, depending on the size of the staff of the Public Prosecutor's Office, the Deputy Public Prosecutor may be exclusively responsible for the Court for Violence against Women, as well as for other courts or specialisations to which the Deputy Public Prosecutor has been assigned.

5 016 HELPLINE PROVIDING INFORMATION AND LEGAL ADVICE ON GENDER-BASED VIOLENCE.

3 September 2007 to 31 December 2014.

5.1. CALLS MADE TO THE 016 HELPLINE RELATING TO GENDER-BASED VIOLENCE. TRENDS

Between going into operation on 3 September 2007 and the end of the period under review, the helpline providing information and legal advice on gender-based violence (hereinafter 016) received a total of 480,317 calls relating to gender-based violence. In 2014, it received 68,651 calls, 17.8% more than in 2013 (58,274) but 8.4% fewer than in 2008 (74,951), the first full year in which the service was in operation.

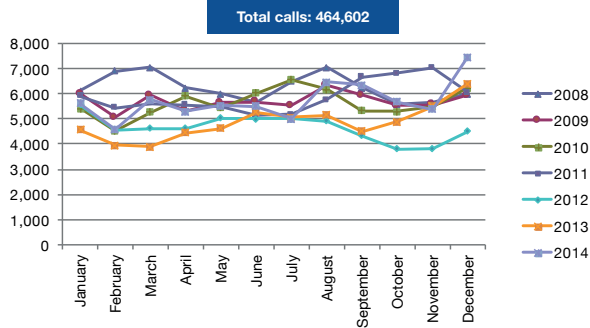

Over the entire period¹⁷, the service received a monthly mean of 5,516 calls. In 2014, monthly mean calls totalled 5,721, more than the monthly mean for 2013.

17. The mean values are calculated from October 2007 onwards, as complete data for September 2007 are not available.

Between the start of operation of the service and the end of the period under review, and only taking the years between 2008 and 2014 into account, December was the month in which most calls were received (42,589). In contrast, February was the month in which fewest calls were received (35,056) over that period. In 2014, December was also the month to record the highest number of calls (7,466), while February saw the lowest number (4,586).

Figure 5.2. Calls received by the 016 helpline, by month and year.

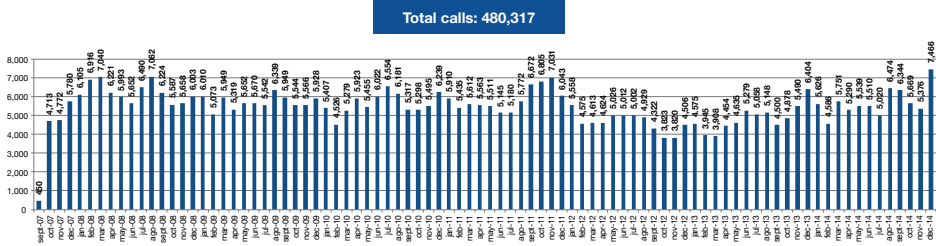

1 January 2008 to 31 December 2014.

3 September 2007 to 31 December 2014.

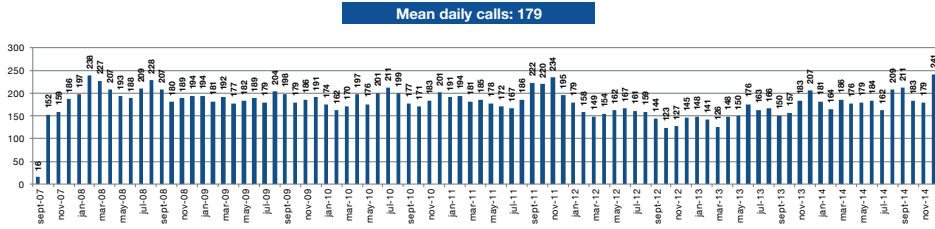

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Between October 2007 and December 2014, the daily mean number of calls received totalled 179, with the hourly mean number of calls received reaching 7.5. In 2014, these figures stood at 188 and 7.8, respectively.

Figure 5.4: Daily mean number of calls received by the 016 helpline, by month and year.

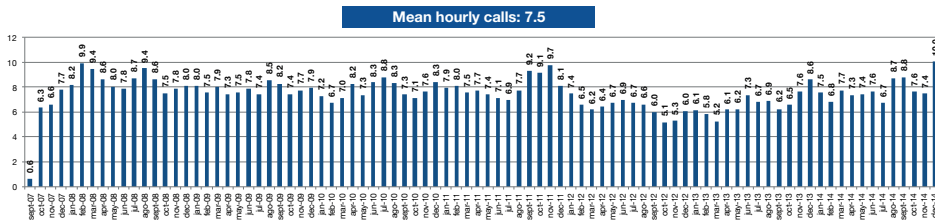

3 September 2007 to 31 December 2014.

Figure 5.5: Hourly mean number of calls received by the 016 helpline, by month and year.

3 September 2007 to 31 December 2014.

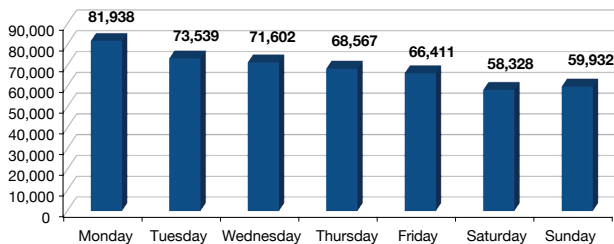

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Analysis of the breakdown of calls by day of the week reveals that the highest number was received on Mondays. The volume then decreases as the week progresses and Saturdays are the days on which fewest calls were received. This pattern is repeated throughout all of the years under review.

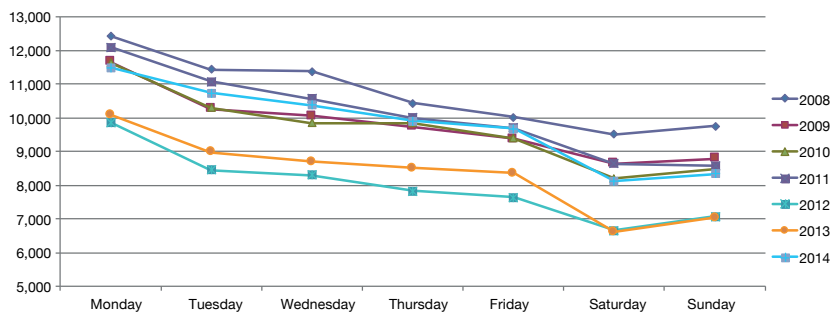

Figure 5.6: Calls relating to gender-based violence received by the 016 helpline, by day of week.

3 September 2007 to 31 December 2014.

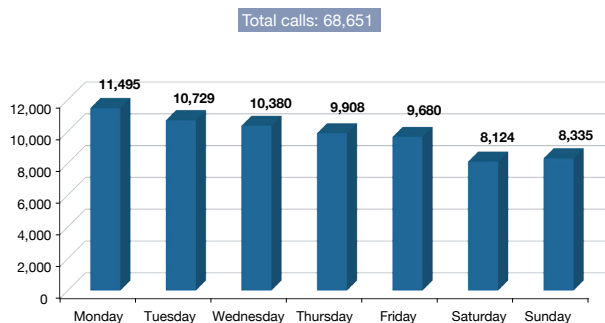

Figure 5.7. Calls relating to gender-based violence received by the 016 helpline, by day of week and year. 2008–2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

In 2014, a total of 11,495 calls were received on Mondays (the day of highest volume). Meanwhile, on Saturdays (the day of lowest volume), 8,124 were received.

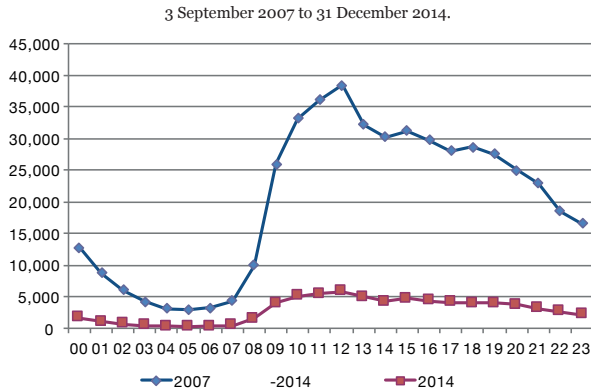

Figure 5.8. Calls relating to gender-based violence received by the 016 helpline, by day of week. 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Over the period under review, 35.2% of all calls (201,559) were received between 10:00 and 15:00, with most calls being received between 10:00 and 12:00 (22.4% of the total). In 2014, 43.8% of calls were received between 10:00 and 15:00 and 23.8% between 10:00 at 12:00.

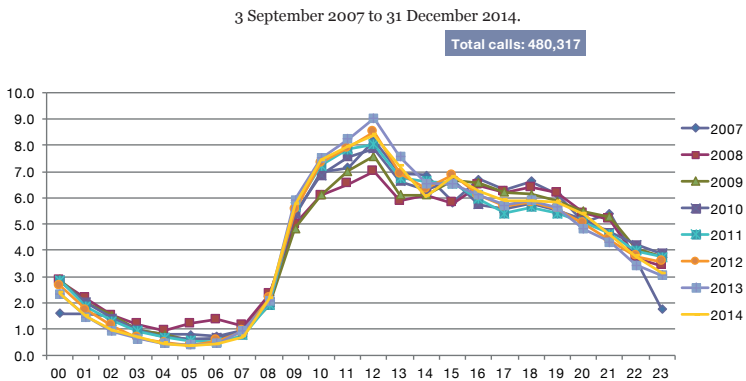

Figure 5.9. Calls related to gender-based violence received by the 016 helpline, by time of day.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

The breakdown of calls received by time of day was similar in every year under review since 2007.

Figure 5.10. Percentage breakdown of calls relating to gender-based violence received by the 016 helpline, by time of day and year.

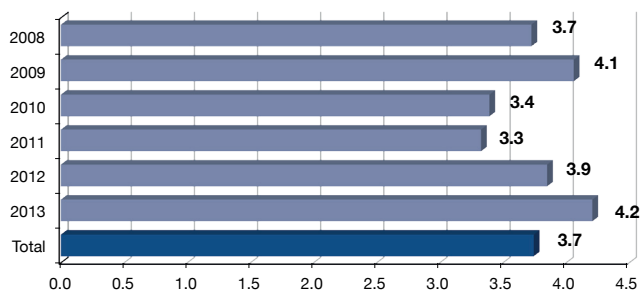

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Data on mean call length until 2013 are shown below.¹⁸

Mean call length between 2008 and 2013 stood at 3.7 minutes. The highest mean call length was recorded in 2013 (4.2 minutes). In 2013, mean call length was 9.3% higher than it was in 2012 (3.9 minutes).

18. Due to a change made to the data entry system in 2014, at the time of going to print information on the length of the calls received that year was not available.

Figure 5.11. Mean length (in minutes) of calls relating to gender-based violence received by the 016 helpline, by year. 2008–2013.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

The length of the call received by the 016 helpline is known for 395,947 of the 395,951 calls received between 2008 and 2013.

Comparison of call length in 2012 and 2013 reveals that the number of calls lasting fewer than 2 minutes fell year-on-year by 4.8%. In contrast, those lasting between 2 and 5 minutes rose by 12.6%, those lasting between 5 and 10 minutes increased by 25.5%, and those lasting over 10 minutes climbed by 16.9%.

5.2. CALLS RECEIVED BY THE 016 HELPLINE, BY AUTONOMOUS COMMUNITY AND PROVINCE.

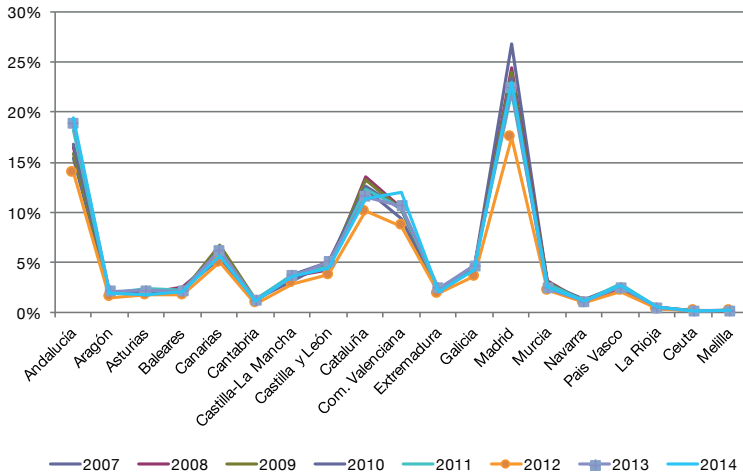

3 September 2007 to 31 December 2014.

Over the period under review, calls were received from every autonomous community and province.

The breakdown of calls received by autonomous community between 2007 and 2014 reveals that the numbers have remained stable.

Figure 5.12: Percentage breakdown of calls relating to gender-based violence received by the 016 helpline, by autonomous community and year.

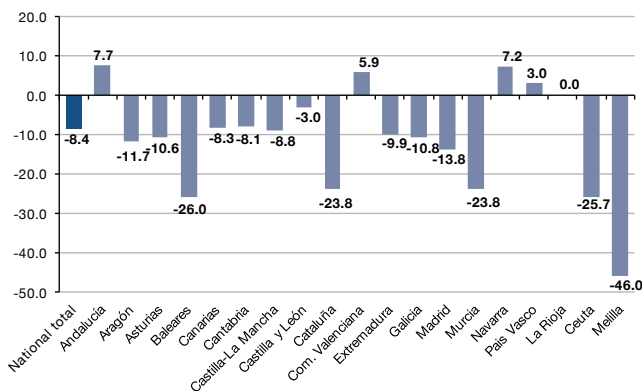

3 September 2007 to 31 December 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Analysis of the percentage variation in the number of calls received between 2008 and 2014 reveals that the autonomous communities/cities in which this number fell most were Melilla (46%), Baleares (26%), Ceuta (25.7%), Murcia and Cataluña (by 23.8% in both). Conversely, the number of calls increased in Andalucía (7.7%), Navarra (7.2%), Comunidad Valenciana (5.9%) and País Vasco (3%).

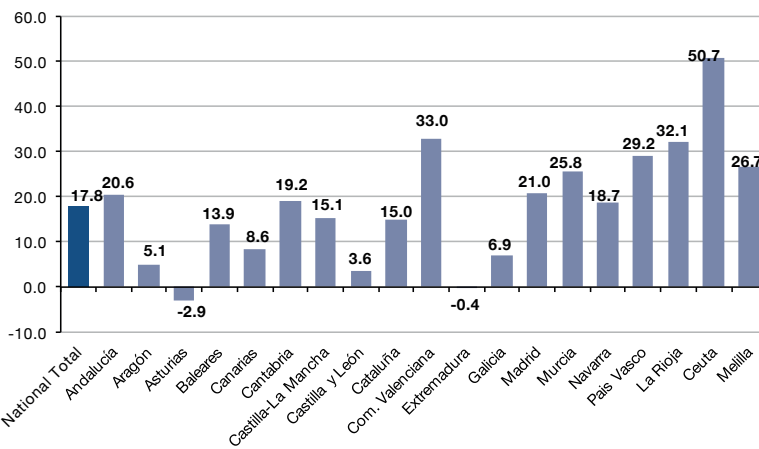

Figure 5.13. Percentage variation in the number of calls received by the 016 helpline between 2008 and 2014, by autonomous community.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

In comparison with 2013, the number of calls rose in all of Spain's autonomous communities except Asturias and Extremadura, where they fell by 2.9% and 0.4%, respectively.

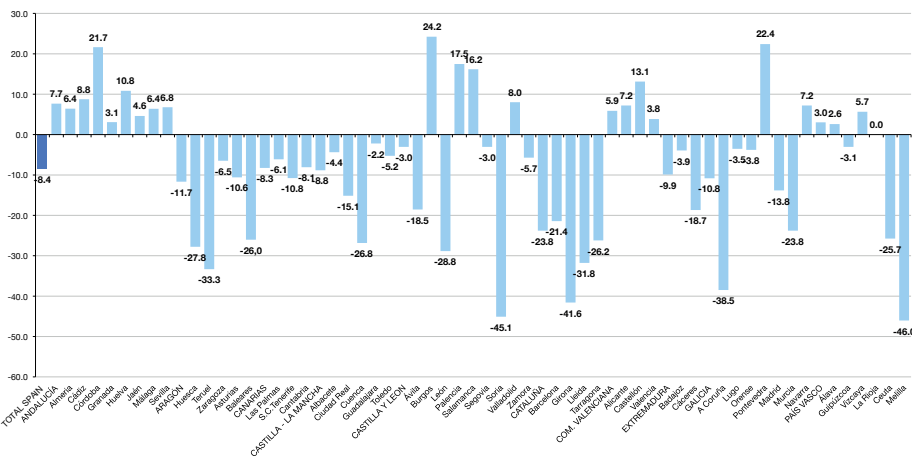

Figure 5.14. Percentage variation in the number of calls received by the 016 helpline between 2013 and 2014, by autonomous community.

The figure below compares, at provincial level, the variation in calls relating to gender-based violence received in 2014 against those received in 2008.

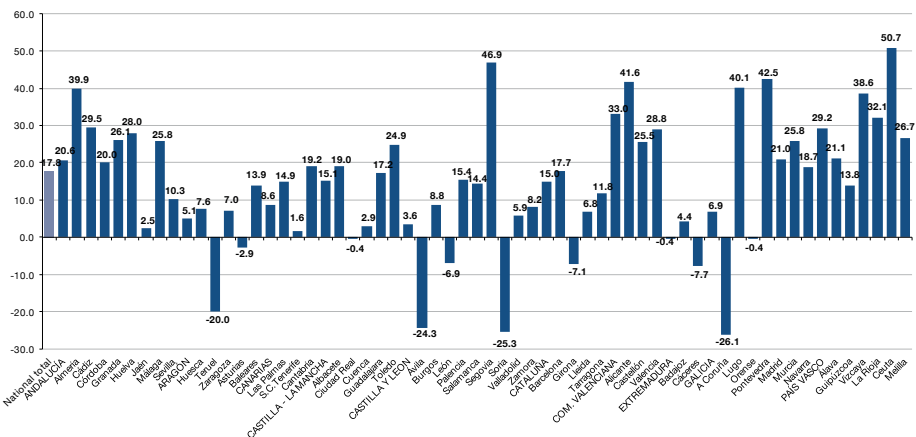

Figure 5.15. Percentage variation in calls relating to gender-based violence received by the 016 helpline, by province. 2008–2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Between 2013 and 2014, the number rose in almost every province. The biggest increases were recorded in Ceuta and Salamanca, while the sharpest decreases occurred in A Coruña and Soria.

Figure 5.16. Percentage variation in calls relating to gender-based violence received by the 016 helpline, by province. 2012–2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

To analyse the number of calls in the last year of the period against the population data, the following conditions are assumed to exist: 1) Each call received refers solely to two subjects: victim and aggressor; 2) Victims and aggressors, the passive and active subjects of the gender-based violence referred to in each call, are different to the subjects referred to in other calls; 3) Each victim is abused by a sole aggressor, and each aggressor abuses a sole victim. Assuming the above three conditions, the ratio of calls received in 2014 per million females aged 15 and over stood at 3,372.1.

Madrid (5,514.1), Canarias (4,303.9) and Comunidad Valenciana (3,808.1) were the autonomous communities with the highest ratios, while País Vasco (1,945.7), Aragón (2,215.7) and Galicia (2,294.6) were those with the lowest.

By province, Madrid (5,514.1), Las Palmas (4,595.2), Sevilla (4,438.2) and Santa Cruz de Tenerife (3,992.9) had the highest ratios of calls per million females aged 15 and over. The lowest ratios were recorded in Teruel (1,200), Lleida (1,275.6) and Soria (1,400.1).

Figure 5.18. Ratio of calls relating to gender-based violence received by the 016 helpline per million females and males aged 15 and over, by province. 2014.

5.3. CALLS RECEIVED BY THE 016 HELPLINE, BY SIZE OF PLACE OF RESIDENCE.

March 2008 to December 2014.

Information is available about the place of residence of a large number of the women who called the 016 helpline between March 2008 and December 2014. Based on this data, and by combining it with information available from the National Statistics Institute, it is possible to estimate the size of the women's place of residence.

The breakdown of calls made by female users for which information about their place of residence is available shows that, until the final year in the series, the percentage of calls received tended to decrease with size of place of residence (as did the ratio of calls per million females aged 15 and over).

5.4. USERS OF THE 016 HELPLINE.

3 September 2007 to 31 December 2014.

Most of the calls received by the 016 helpline since the service went into operation were made by women requiring information relating to their own situation (355,639 calls; 74%). Relatives and friends of victims made 11,282 calls (23.4%) and private- and public-sector organisations and professional support providers made 12,396 (2.6%). This breakdown remained stable throughout the period under review.

5.4.1. Socio-demographic characteristics of female users and their aggressors.

3 September 2007 to 31 December 2014.

Between 2007 and 2014, women in a variety of circumstances called the helpline for information about gender-based violence. The figures listed below refer to some of the 355,639 calls made by women seeking support in relation to their own individual situations.

The confidentiality observed by the service means that it is not possible to identify users who called the 016 helpline more than once. To simplify analysis, the term 'women' is used to refer to female users of the 016 helpline. Aggressors' socio-demographic characteristics are those described by female 016 helpline users.

5.4.1.1. Age of female callers and their aggressors. 3 September 2007 to 31 December 2014.

The age is known of 36,028 female 016 helpline users and of 5,049 aggressors. These data are derived from information provided by helpline users. Between 2007 and 2014, female users' mean age was 41 while aggressors' was 46.

Table 5.5. Mean victim and aggressor age stated in calls relating to gender-based violence received by the 016 helpline, by year. 2007–2014.

| | 2007-2014 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 |

5.4.1.3. Number of children of female users

Between the start of operation of the service and the end of the period under review, 80,002 women provided information about their maternal status. Of that number, 14.6% stated that they were childless and 85.4% stated that they had one or more children. In 2014, the percentage of women who stated they were childless stood at 25.4% (1.9 percentage points higher than in 2013), while 74.6% stated they had one or more children.

Since December 2009, the service collects information about minors living in environments affected by gender-based violence. Of the total number of women who reported being victims of gender-based violence and stated they had children in the home, 60.8% said they had one child under 18, 31.1% said they had two, and 8.1% said they had three or more children under 18. In 2014, these percentages stood at 57.1%, 34.9% and 8.1%, respectively.

5.4.1.4. Nationality of victims and aggressors

Between 2008¹⁹ and 2014, a total of 68,588 female 016 helpline users stated their nationality. Of that number, 78.2% (53,612 women) stated they were Spanish nationals and 21.8% (14,976) stated they were foreign nationals. The nationality of the aggressor was provided in 51,371 cases. Of that number, 80.5% (41,335 aggressors) were Spanish nationals and 19.5% (10,036) were foreign nationals. The percentages of Spanish victims and aggressors steadily increased between 2008 and 2012 before dropping from 2013 onwards.

5.4.1.5. Employment status of female users

Between the start of operation of the service and the end of the period under review, 18,579 women stated their employment status. Of that number, 51.8% (9,629) were in employment and 31.1% (5,787) were seeking employment. Thus, 83% were active in the labour market.

Of the total, 43.8% (8,135) were in full-time employment. Students made up the smallest group, accounting for 1.6% (298).

Figure 5.32. Percentage breakdown of female 016 helpline users, by employment status.

3 September 2007 to 31 December 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Comparing the rates of active labour-market participation, employment and unemployment among female 016 helpline users against the overall female population shows that among the first two groups the rates were significantly higher than among the general population. Consequently, the rate of non-participation in the labour market was considerably lower.

5.4.1.6. Length of relationship between victims and aggressors.²⁰

Between November 2009 and the end of the period under review, 17,736 women stated the length of their relationship with their aggressor. Of that number, 25.6% (4,542) stated the length of their relationship with their aggressor as over 20 years, while 19.9% (3,531) stated it as between 10 and 20 years. At the other end of the scale, 8.7% of women who provided this information stated that they had been in a relationship with their aggressor for under one year.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Married women made up the biggest group of those who had been in a relationship with their aggressor for more than 5 years, while unmarried women were the biggest group who had been in a relationship with their aggressor for fewer than years. Between 2009 and 2014, a total of 79% of the women who stated they had been in a relationship for more than 20 years were married. Meanwhile, 53% of the women who stated they had been in a relationship for less than one year were unmarried. Finally, 51.8% of the women who stated they were divorced or separated had been in a relationship with their aggressor that had lasted for more than 10 years.

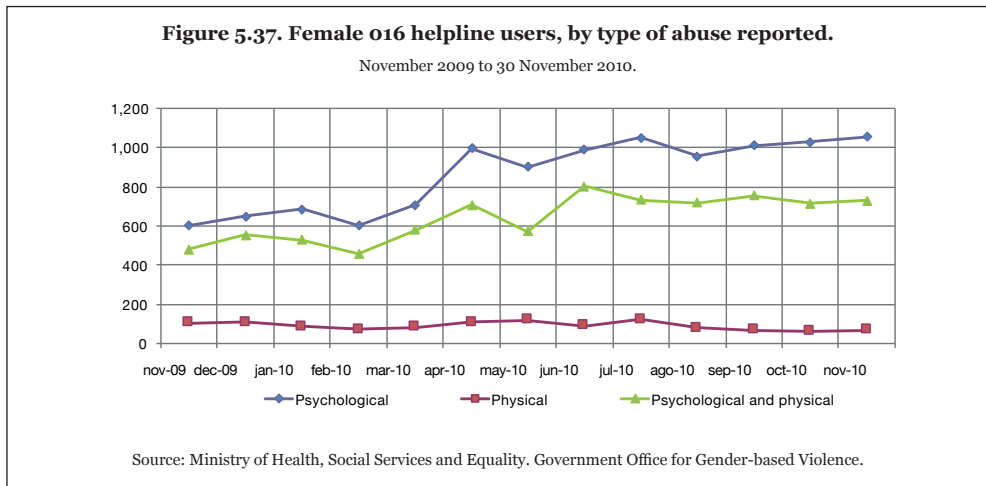

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

20. Since November 2009, the service has collected information about the length of the relationship with the aggressor and the type of abuse suffered.

5.4.1.7. Type of abuse reported.

Between November 2009 and November 2010, information was gathered on the type of abuse suffered by victims, differentiating between physical abuse, psychological abuse and combined physical and psychological abuse. Since December 2010, a second classification has been used to differentiate social abuse, financial abuse, verbal/emotional abuse, sexual abuse and physical abuse.

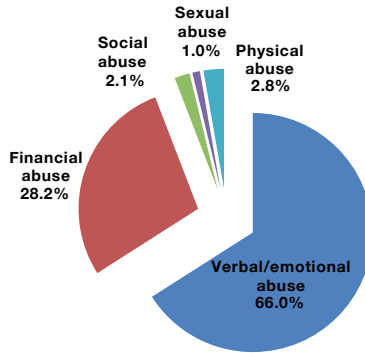

Between November 2009 and November 2010, of the 20,741 women who specified the type of abuse suffered, 54.1% stated they had suffered psychological abuse, 5.6% physical abuse and 40.2% stated they had suffered both types. Analysis of the data show that the number of women who stated they were victims of physical abuse remained constant, while the number of women who stated they were victims of psychological abuse increased month by month. The same pattern was repeated among women who reported being victims of both forms of abuse.

As mentioned above, from December 2010 onwards the types of abuse were reclassified. Given that a woman may report being victim of more than one type of abuse, the number of responses for each form of abuse rather than the number of women suffering each one is analysed.

The type of abuse was indicated in 160,722 cases (responses), of which 66% reported verbal/emotional abuse, 28.2% financial abuse, 2.8% physical abuse, 2.1% social abuse, and 1% sexual abuse.

5.4.1.8. Start of abuse

In December 2010, the service began collecting information on the stage of the relationship at which abuse first occurred, differentiating between various starting points (pregnancy, courtship, marriage, separation, etc.).

Between then and the end of the period under review, a total of 18,017 women reported the stage of the relationship at which abuse began. Of these, 42.5% reported that abuse started when married; 26.5% reported it began when living together; 17.2% reported it started during courtship; 7.8% reported it began on separation; 3.8% reported it started during pregnancy; and 2.3% reported it began at another stage of the relationship. In 2014, the percentages of victims reporting that abuse started during pregnancy or courtship were above the mean for the period while the percentages for the other categories were below it.

5.4.2. Relatives and friends of female victims of gender-based violence calling the 016 helpline

Between 2007 and the end of the period under review, the 016 helpline received 112,282 calls from relatives and friends of victims of gender-based violence, accounting for 23.4% of the total number of calls received. In 2014, this percentage stood at 24.9% (a significant decrease on the 28.9% recorded in 2013).

Between 2007 and 2014, 24.6% of calls made by relatives and friends were made by males. Of these, 25.2% were friends of a victim of gender-based violence, 14.3% were fathers, 15.3% were brothers and 9.6% were sons.

Meanwhile, 75.4% of calls made by relatives and friends of a victim of gender-based violence were made by females. Of these, 26.6% were friends of a victim, 22.3% were mothers, 15.3% were sisters and 8% were daughters.

5.5. MALICIOUS CALLS

6 March 2008 to 31 December 2014.

On 6 March 2008, the service started monitoring the type of call received, differentiating between relevant and non-relevant calls. Non-relevant calls comprise malicious calls, wrong numbers and contentless calls.

Between the date above and the end of the period under review, the service recorded a total of 1,503,722 non-relevant calls, of which 10.4% were classified as malicious calls (157,133). Since January 2011, the service has disaggregated this type of call further, differentiating between hoax, insulting, obscene, threatening and other calls. The results are shown in the table below.

In 2014, the service received 23,598 malicious calls, 30.3% more than in 2013.

Table 5.14. Malicious calls received by the 016 helpline, by year. Percentage year-on-year variation and aggregate variation. 2008–2014.

| | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 |
|-------------------------------|--------|--------|---------|--------|--------|--------|--------|
| Malicious calls | 68,740 | 72,919 | 103,486 | 75,702 | 39,717 | 18,118 | 23,598 |
| Year-on-year variation | - | 6.1% | 41.9% | -26.8% | -47.5% | -54.4% | 30.2% |

ANAR HELPLINE FOR CHILDREN AND ADOLESCENTS AT RISK.

January to December 2014.

The ANAR helpline for children and adolescents at risk is intended to provide answers to the problems faced by minors in high-risk situations.

The service is aimed at both minors (via the Child and Adolescent Helpline) and adults seeking guidance on how to help children in their immediate circle (via the Adult and Family Helpline).

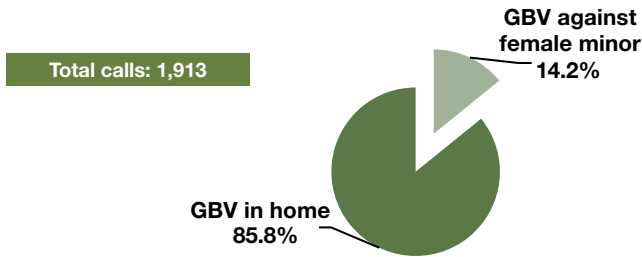

In 2014, the two helplines received 1,913 calls.

The data have been analysed by number of calls and it is possible that a single case involving a minor could generate several calls.

The following are analysed separately:

- Situations in which a female minor is the direct victim of gender-based violence (271 calls, 14.2% of the total).
- Situations in which minors of both sexes form part of the family circle of female victims of gender-based violence (1,642 calls, 85.8% of the total).

Figure 6.1. Percentage breakdown of calls received by the ANAR helpline, by type of violence. 2014.

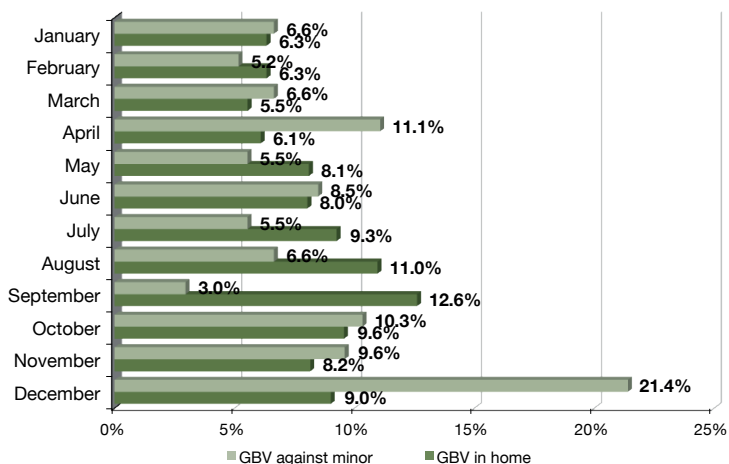

Source: Compiled in-house from data provided by the ANAR helpline.

Analysis of call frequency by month in 2014 reveals:

- Most calls referring to gender-based violence within a minor’s immediate circle were received in August, September and October.
- Most calls referring to minors as direct victims of gender-based violence were received in April, October and December.

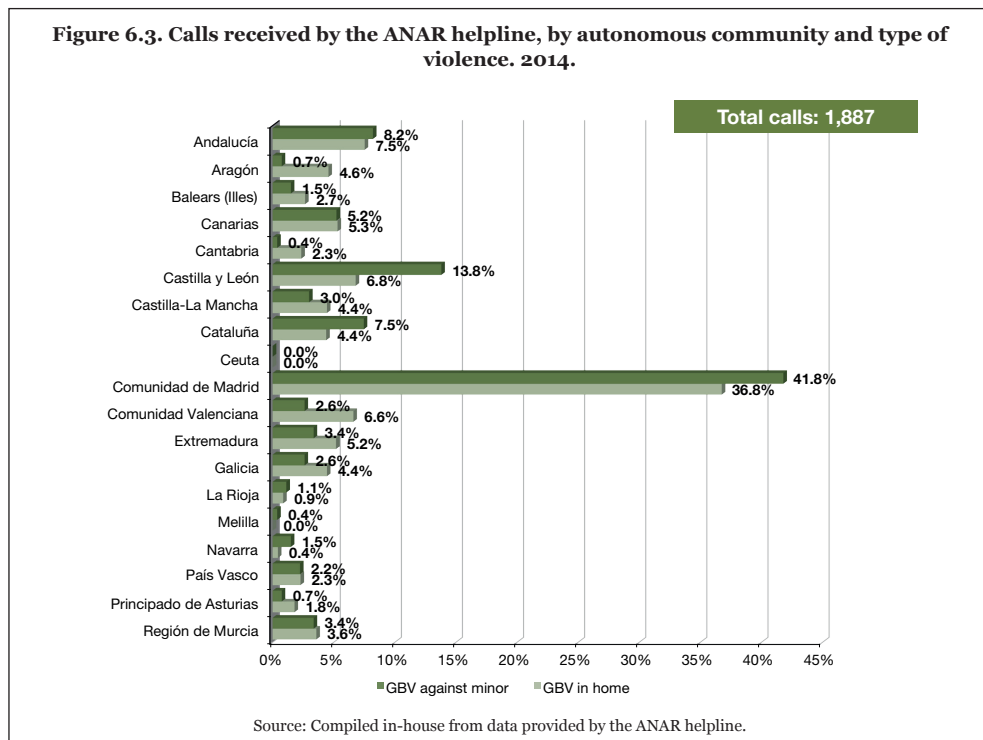

Figure 6.2. Percentage breakdown of calls received by the ANAR helpline, by month and type of violence. 2014.

Source: Compiled in-house from data provided by the ANAR helpline.

By autonomous community, Madrid (41.8%) and Castilla y León (13.8%) recorded the highest percentages of calls referring to minors as victims of gender-based violence in 2014.

Madrid (36.8%) and Andalucía (7.5%) also recorded the highest percentages of calls referring to gender-based violence within minors' family circle, with Castilla y León recording the third-highest percentage (6.8%).

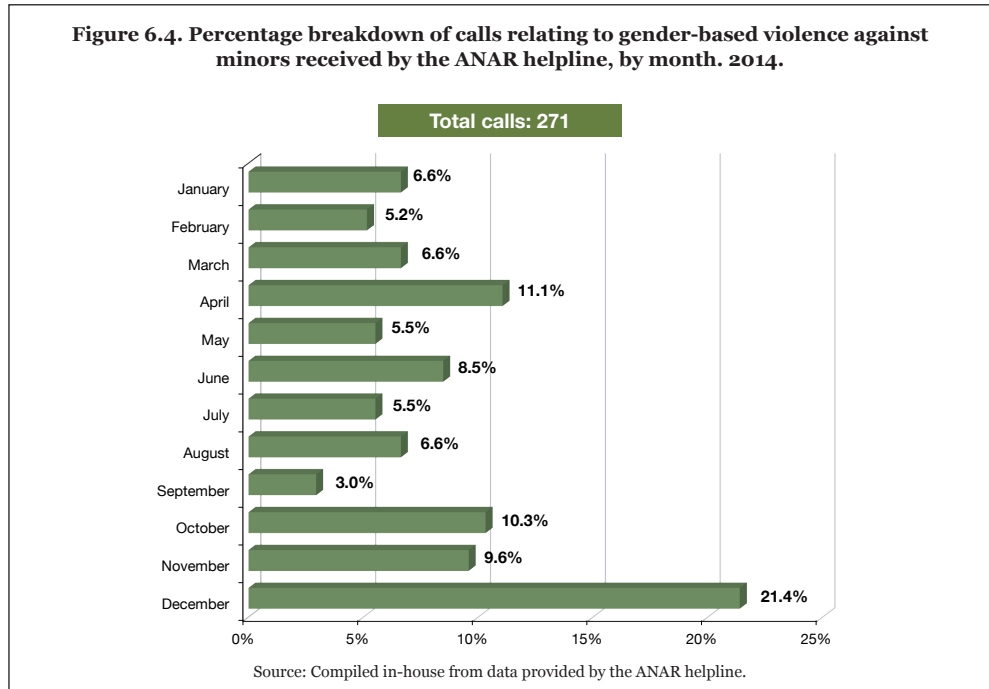

6.1. CALLS RECEIVED CONCERNING MINORS AFFECTED BY GENDER-BASED VIOLENCE. 2014.

In 2014, the ANAR helpline for children and adolescents at risk received 271 calls requesting help or guidance regarding gender-based violence involving minors (37.6% more than in 2013).

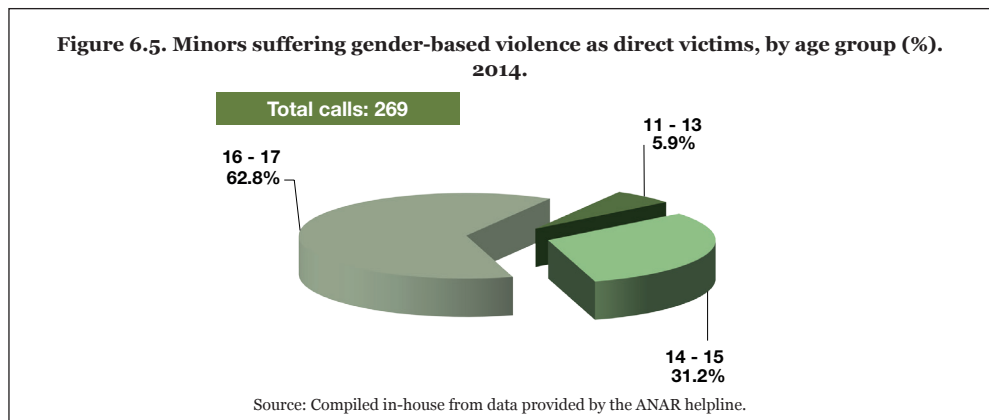

Of the total number of calls, 44.3% were received via the child helpline, while the remaining 55.7% were received via the adult helpline. Of these, 69.5% were made by the victim's mother (ten percentage points higher than the year before).

Over 52.4% of the total number of calls received (142/271) were made in April, October, November and December.

6.1.1. Age of minors affected by gender-based violence. 2014.

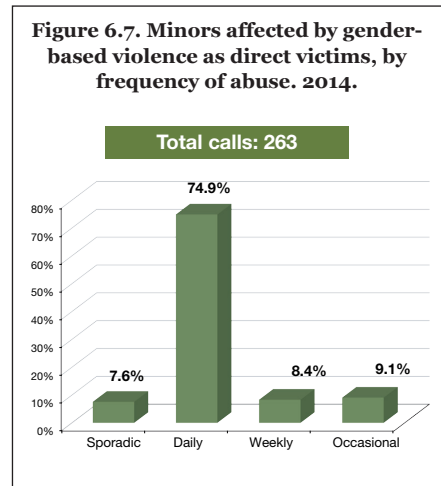

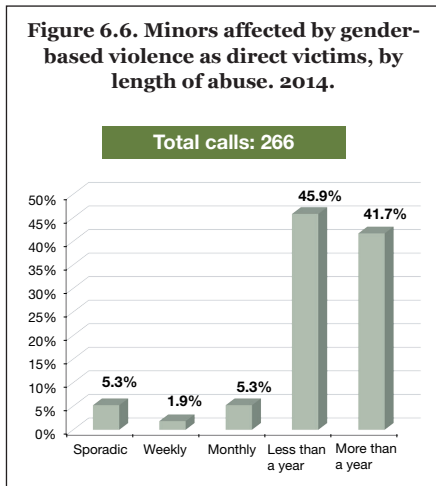

The age of the victim was stated in 269 calls. By age group, 62.8% (169) of victims were aged between 16 and 17; 31.2% (84) were aged between 14 and 15; and 5.9% (16) were aged between 11 and 13. The mean age was 15.6.

6.1.2. Length and frequency of abuse. 2014.

Analysis of the total number of calls received in 2014 in which the length (266) and frequency (263) of the gender-based violence suffered by the minor were stated reveals that in 41.7% of cases (111) the caller affirmed that the situation had begun more than a year before and that in 45.9% of cases (122) that it had begun less than a year but more than a month before.

Furthermore, 74.9% (197) affirmed that violence occurred daily; 8.4% (22) that it occurred weekly; 9.1% (24) that it occurred occasionally; and 7.6% (20) that it occurred sporadically.

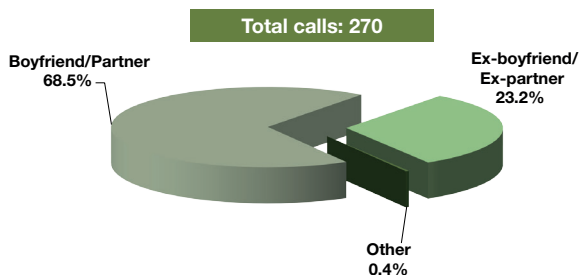

Source: Compiled in-house from data provided by the ANAR helpline.

6.1.3. Identification of aggressors. 2014.

Of the total number of aggressors identified in the calls (270), 68.5% were the victim's partner (185) while in 31.1% of cases (84) the relationship had ended.

Figure 6.8. Minors suffering gender-based violence as direct victims, by relationship with aggressor. 2014.

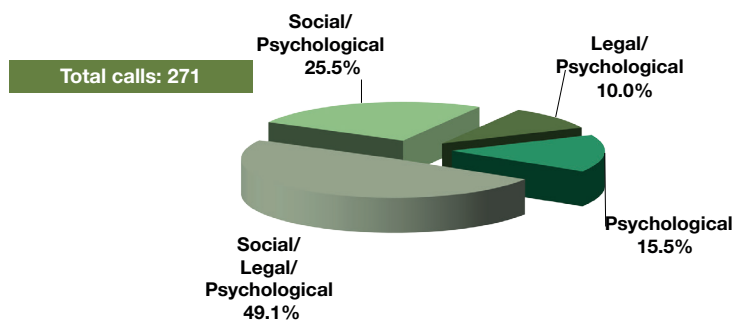

Source: Compiled in-house from data provided by the ANAR helpline.

6.1.4. Type of guidance provided by the helpline. 2014.

Of the persons calling to report a situation in which gender-based violence affected a minor, 49.1% received information and support in all three key areas (psychological, social and legal).

100% of callers received psychological support.

Figure 6.9. Minors suffering gender-based violence as direct victims, by type of guidance requested. 2014.

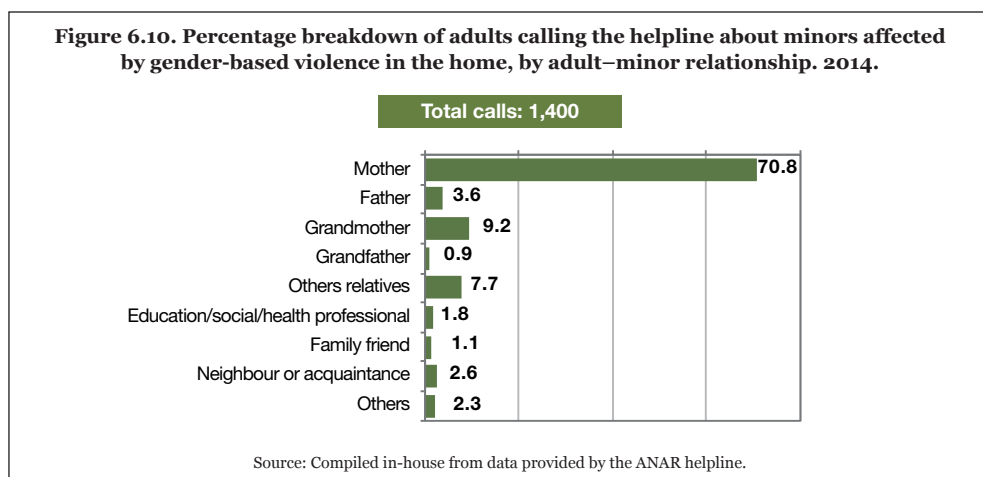

Source: Compiled in-house from data provided by the ANAR helpline.

6.2. CALLS TO THE ANAR HELPLINE FOR CHILDREN AND ADOLESCENTS AT RISK RELATING TO MINORS AFFECTED BY GENDER-BASED VIOLENCE IN THE HOME. 2014.

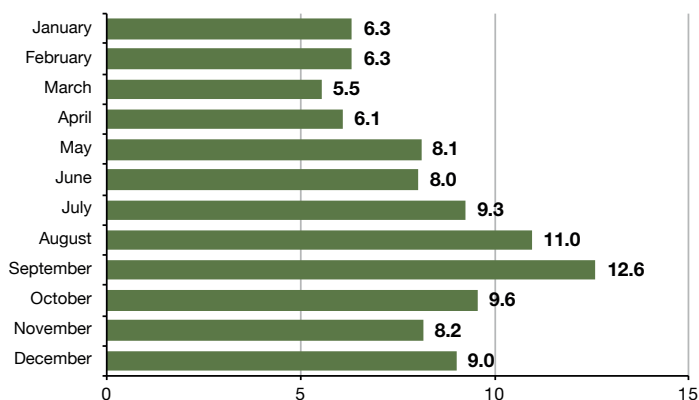

In 2014, a total of 1,642 calls were made to the ANAR helpline for children and adolescents at risk requesting help or guidance concerning minors affected by gender-based violence in the home.

Of these calls, 12.1% were received via the child helpline, while 87.9% were received via the adult and family helpline. Comparison of these figures against those for 2013 reveals that the number of calls made by minors increased while, in relative terms, the number made by adults decreased. Calls received by the adult helpline were generally made by members of the minor's family, principally mothers (70.8%) and grandmothers (9.2%).

The highest numbers of calls were received in September (207), August (180) and October (157).

Figure 6.11. Percentage breakdown of calls relating to minors affected by gender-based violence in the home, by month. 2014.

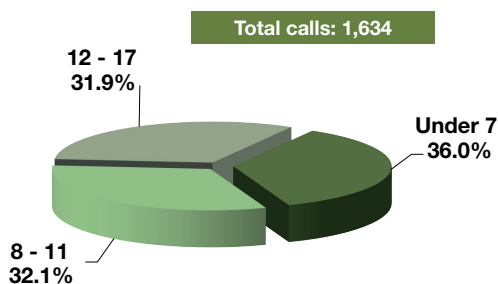

Source: Compiled in-house from data provided by the ANAR helpline.

6.2.1. Socio-demographic characteristics of minors affected by gender-based violence in the home. 2014.

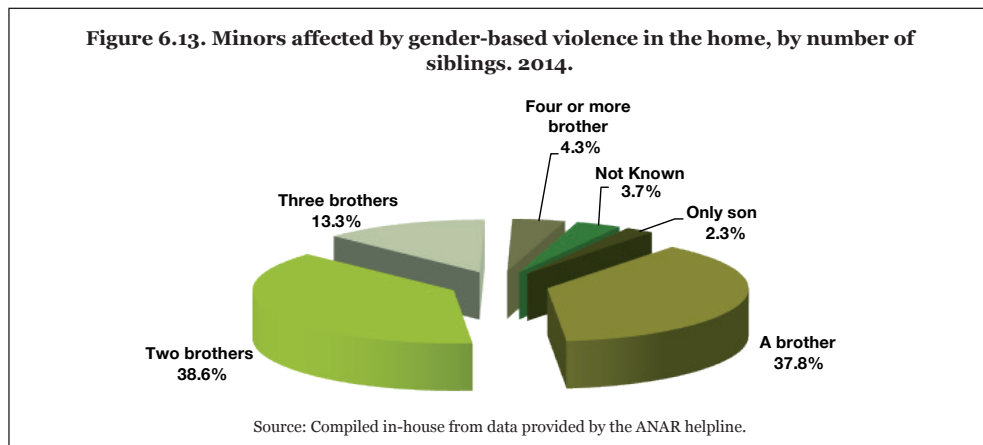

The age of the minor was given in 1,634 cases. As was the case the year before, minors aged under 7 constituted the largest age group. The mean age was 8.6.

Figure 6.12. Minors affected by gender-based violence in the home, by age group. 2014.

Source: Compiled in-house from data provided by the ANAR helpline.

As regards the number of the minor’s siblings, in 76.4% of the calls relating to minors affected by gender-based violence in the home the caller indicated that the minor had one or two siblings, while in 2.3% of the calls the caller indicated that the minor was an only child.

In the 1,634 calls received, female minors were referred to in 48.9% of cases while male minors were referred to in the other 51.1%.

6.2.2. Length and frequency of abuse. 2014.

Of the total number of calls received in which information was given on the length of time that gender-based violence had been occurring in the minor’s home (1,600), in 59.1% of cases (946) it had been occurring for over a year.

Analysing the frequency with which acts of gender-based violence occurred in the minor’s home environment reveals that, of those callers who provided this information (1,584), 48% stated that violence took place daily (1.7 percentage points lower than the year before).

Figure 6.14. Minors affected by gender-based violence in the home, by length of abuse. 2014.

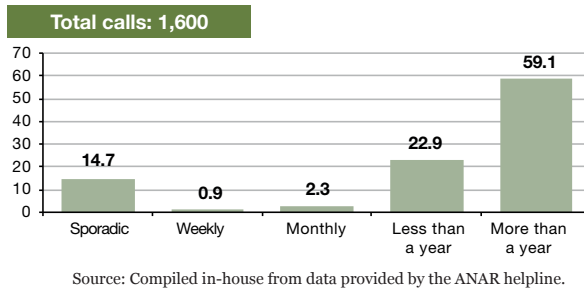

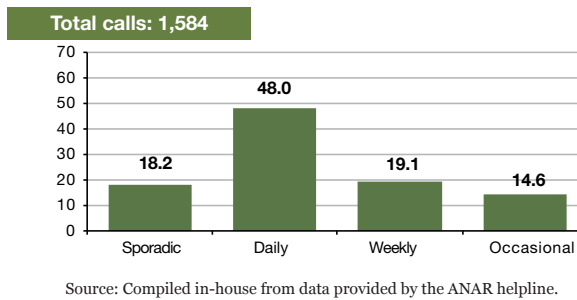

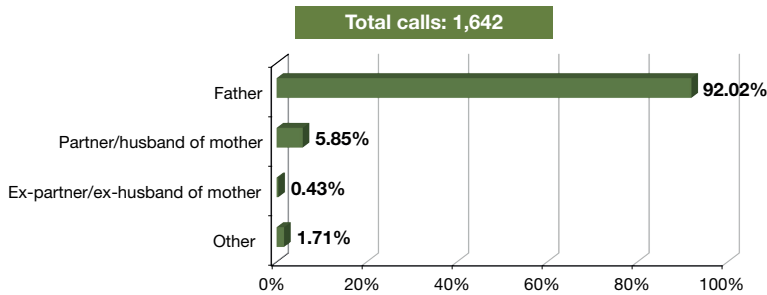

Figure 6.15. Minors affected by gender-based violence in the home, by frequency of abuse. 2014.

6.2.3. Identification of aggressors. 2014.

Of the total number of aggressors identified in the calls (1,642), 92.02% were the father of the minors referred to in the call, while in 5.85% of cases the aggressor was the current partner or husband of the minor's mother.

Figure 6.16. Aggressors of minors affected by gender-based violence in the home, by aggressor–minor relationship. 2014.

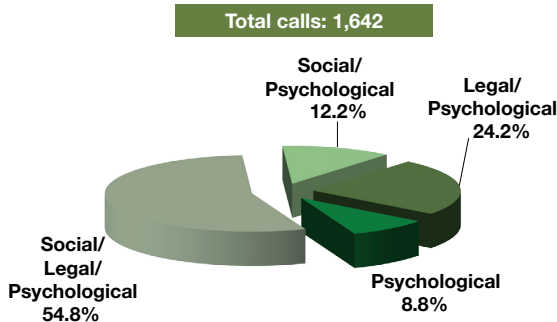

Source: Compiled in-house from data provided by the ANAR helpline.

6.2.4. Type of guidance provided by the helpline. 2014.

Of the 1,642 persons who called the helpline requesting help or guidance relating to minors affected by gender-based violence in the home, 54.8% received information and support in all areas (psychological, social and legal), a slightly higher percentage than in 2013.

7 FEMALE USERS OF THE ATENPRO ASSISTANCE AND PROTECTION HELPLINE FOR VICTIMS OF GENDER-BASED VIOLENCE.

December 2005 to December 2014.

7.1. CHANGES IN NUMBERS OF FEMALE USERS, REGISTRATIONS AND DE-REGISTRATIONS WITH THE ATENPRO ASSISTANCE AND PROTECTION HELPLINE FOR VICTIMS OF GENDER-BASED VIOLENCE.

December 2005 to December 2014.

Between the start-up of the ATENPRO assistance and protection helpline for victims of gender-based violence and the end of 2014, a total of 59,930 women registered with the service. Of that number, 49,428 subsequently de-registered, leaving a total of 10,502 registered female users at the end of 2014.

Table 7.1. Changes in numbers of registered female users of the ATENPRO helpline as at 31 December and changes in annual registrations and de-registrations.

December 2005 to December 2014.

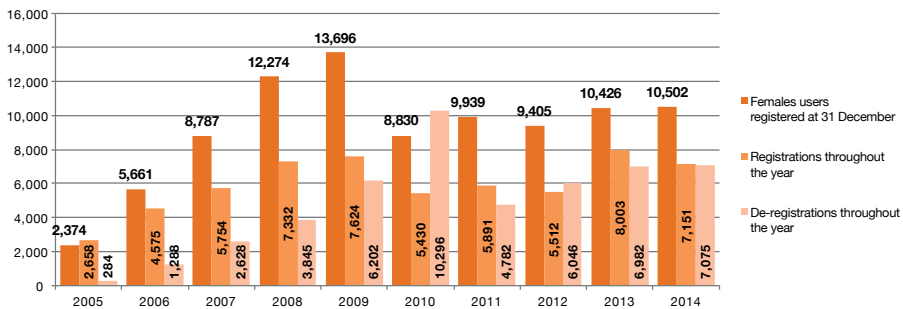

| | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 |

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

The number of female users registered with the ATENPRO helpline rose steadily between 2005 and 2009. Following rationalisation of the service — in which helplines that had not been used for months, along with others that it was not possible to contact, were taken out of operation — the number of registered users fell and by December 2010 it had shrunk by 35.5% in comparison with 2009. Since then, the trend in registrations has once again been upwards.

Figure 7.1. Changes in numbers of registered female users of the ATENPRO helpline as at 31 December and changes in annual registrations and de-registrations.

December 2005 to December 2014.

7.2. NUMBERS OF FEMALE USERS, REGISTRATIONS AND DE-REGISTRATIONS FOR THE ATENPRO ASSISTANCE AND PROTECTION HELPLINE FOR VICTIMS OF GENDER-BASED VIOLENCE. 2014.

In 2014, a total of 7,151 females registered with the ATENPRO helpline, producing a monthly mean of 596. Over the year, 7,075 de-registered, producing a monthly mean of 590.

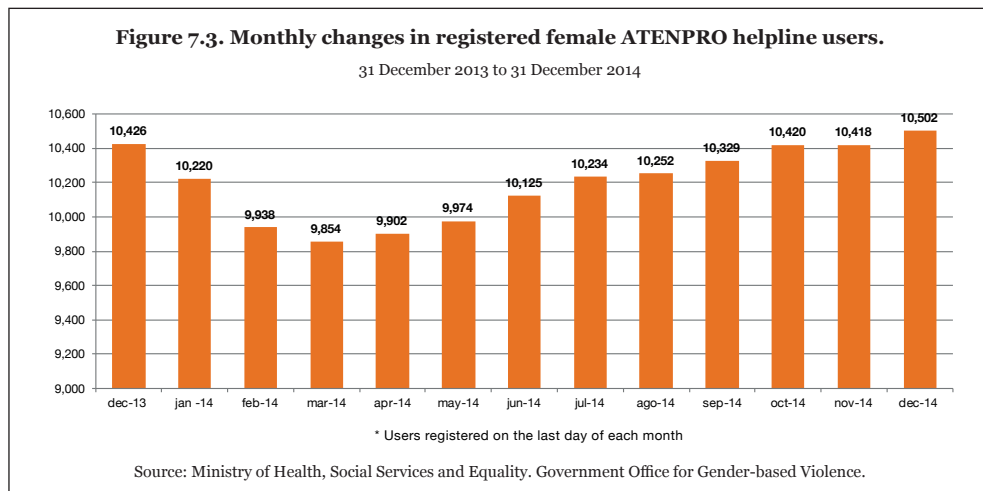

The figure below shows registrations and de-registrations by month. Most registrations occurred in February (839), while most de-registrations occurred in October (686).

Figure 7.2. ATENPRO helpline registrations and de-registrations in 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

As regards the monthly changes in registered female users throughout 2014, the figure below shows a steady fall in numbers at the beginning of the year (dropping to 9,854 in March) followed by recovery from April onwards to reach a total of 10,502 registered female users in December. The mean for the period under review was 10,200 registered female users.

7.3. FEMALE USERS OF THE ATENPRO ASSISTANCE AND PROTECTION HELPLINE FOR VICTIMS OF GENDER-BASED VIOLENCE, BY AUTONOMOUS COMMUNITY AND PROVINCE.

December 2005 to December 2014.

With a total of 2,205 registered female users at the end of 2014, Andalucía was the autonomous community with the highest number of female users of the service. It was followed by Comunidad Valenciana (1,886), Cataluña (1,649) and Madrid (1,315). Overall, 67.2% of female users registered with the ATENPRO service on 31 December 2014 lived in one of those four autonomous communities.

A total of 17,369 females were registered as service users at some point in 2014. The breakdown by autonomous community is shown in the following table:

Table 7.2. Registered female ATENPRO helpline users as at 31 December 2014 and throughout 2014. Absolute data and ratio per million females aged 15 and over.

| | Females users at 31 December | | Registered female users in 2014 | |
|----------------------|------------------------------|---------------------------|---------------------------------|---------------------------|

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Comparing the number of female users of the ATENPRO assistance and protection helpline for victims of gender-based violence with the total population of females aged 15 and over in the various autonomous communities reveals that in 2014, Comunidad Valenciana (1,508.1) had the highest ratio of female users per million females aged 15 and over. It was followed by Asturias (1,472.2) and Castilla-La Mancha (1,295.7). In contrast, La Rioja (21.8), País Vasco (67.7) and Navarra (223.2) had the lowest ratios of registered female users in 2014 per million females aged 15 and over.

By province²¹, the highest numbers of female users registered with the ATENPRO assistance and protection helpline for victims of gender-based violence both at the end of 2014 and throughout the year were located in Madrid, Barcelona, Valencia, Alicante and Sevilla. Female users living in these five provinces accounted for 44.8% of the total number registered.

21. See table 7.10

Figure 7.4. Registered female ATENPRO helpline users as at 31 December and throughout 2014. Ratio per million females aged 15 and over. 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Comunidad Valenciana, Andalucía, Madrid and Cataluña were the autonomous communities that recorded the highest aggregate numbers of registrations since service start-up.

7.4. SOCIO-DEMOGRAPHIC CHARACTERISTICS OF FEMALE USERS OF THE ATENPRO ASSISTANCE AND PROTECTION HELPLINE FOR VICTIMS OF GENDER-BASED VIOLENCE, AND OF THEIR AGGRESSORS.

1 January to 31 December 2014.

The data analysed below refer to female users who used the assistance and protection helpline for victims of gender-based violence at some point during 2014 (17,370 users).

7.4.1. Types of relationship between female users and aggressors. Registered female users in 2014.

The types of relationship between the victims and their aggressors prior to registering with the assistance and protection helpline for victims of gender-based violence were as stated in the table and figure below.

In almost a quarter of the cases, the victim's aggressor was her ex-partner while in 20% and 19.7%, respectively, her aggressor was her partner or husband.

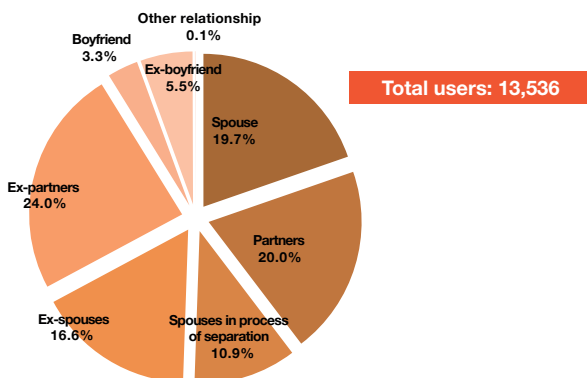

Table 7.5. Type of relationship between victims registered with the ATENPRO helpline and their aggressors.

1 January to 31 December 2014.

| Type of relationship between female user and aggressor | |
|--|---------------|
| Total | 17,370 |
| Spouse | 2,665 |
| Partners | 2,702 |
| Spouses in process of separation | 1,474 |
| Ex-spouses | 2,250 |
| Ex-partners | 3,251 |
| Boyfriend | 440 |
| Ex-boyfriend | 747 |
| Other relationship | 7 |
| Not known | 3,834 |

Figure 7.6. Type of relationship between victims registered with the ATENPRO helpline and their aggressors.

1 January to 31 December 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Of the female users who stated the type of relationship they had with their aggressor prior to using the service (13,536)²², 91.2% of them (12,342) lived with him.

22.. Information regarding whether victims cohabited with aggressors prior to using the service has been obtained from those cases in which the user specified the type of relationship she had with her aggressor.

In 2014, the cohabitation status was known of 13,894 female users of the assistance and protection helpline for victims of gender-based violence. Of that number, 88.5% (12,290) cohabited with one or more persons other than their aggressor, while 11.5% (1,604) lived alone.

7.4.2. Age of female users and aggressors. Registered female users.

1 January and 31 December 2014.

Of the total number of female users registered with the ATENPRO helpline in 2014, 62.8% (10,904) were aged between 31 and 50. Aggressor age was known in 2,884 cases. Of those, 62.1% (1,791) were aged between 31 and 50.

Mean aggressor age was 43.4, while mean female helpline user age was 39.9.

Table 7.6. Female ATENPRO users and their aggressors, by age group.

1 January to 31 December 2014.

| | Victims | | Aggressors | |

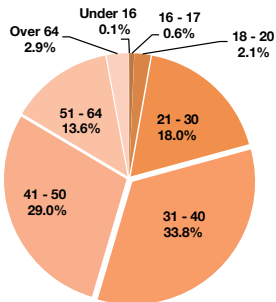

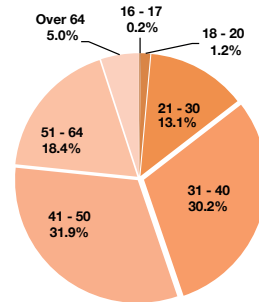

Figure 7.8. Aggressors of registered female helpline users, by age group.

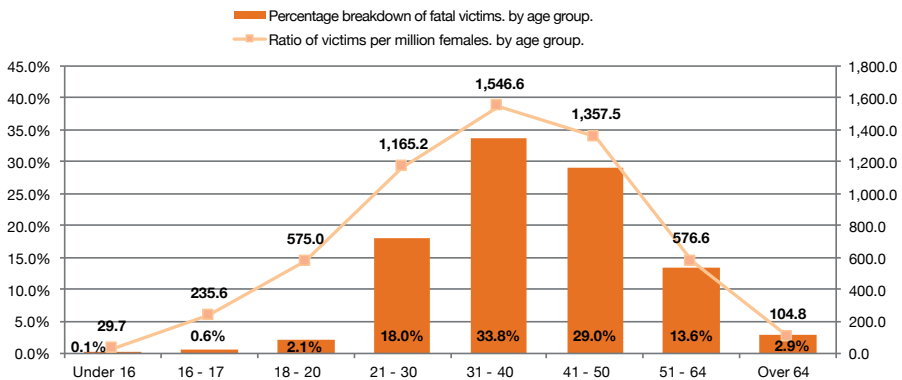

1 January to 31 December 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

The figure below shows the percentage breakdown of female ATENPRO users who were victims of gender-based violence and the ratios per million females by age group. The highest ratios are found among victims aged between 21 and 50.

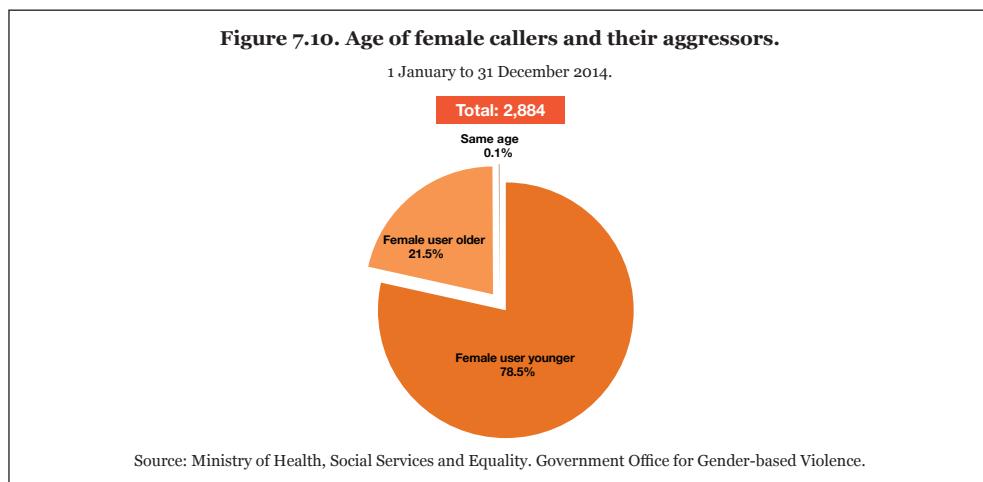

Figure 7.9. Percentage breakdown and ratio²³ of female ATENPRO users in 2014 per million females, by age group.

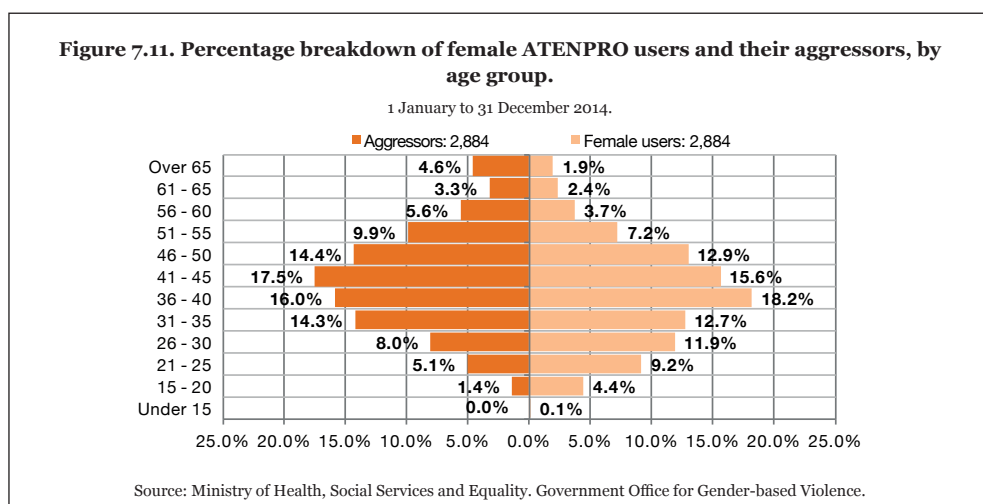

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

23. To calculate the ratios of victims of gender-based violence and their aggressors, the population aged 15 and over is taken as a reference. In this case, in which the ratios are calculated by age group, the reference taken for the ratio for victims aged under 16 is the population aged between 13 and 15, as victims of that age are registered in the monitoring system.

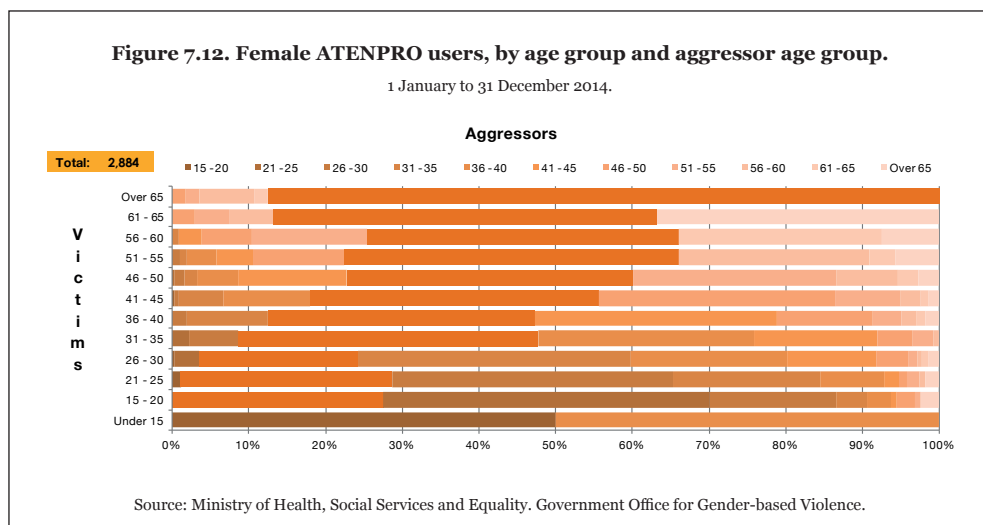

The age of both female helpline user and aggressor was known in 2,884 cases. In the majority of those, the aggressor was older than the user (78.5%).

The population pyramid for female users and aggressors also clearly shows that aggressors were older than their victims. The age of both female user and aggressor was known in 2,884 cases. Of those cases, the highest number of aggressors fell in the 41–45 age group while the highest number of female helpline users fell in the 36–40 age group. Helpline user numbers are higher among the younger age groups while aggressor numbers are higher among the older age groups.

The next figure shows that the majority of aggressors of victims aged under 40 belonged to older age groups. Between 40 and 65, the largest aggressor age group matches the largest victim age group. However, overall, more aggressors belong to age groups older than those of their victims than belong to younger ones.

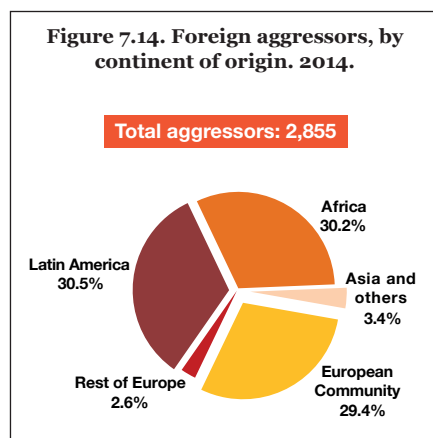

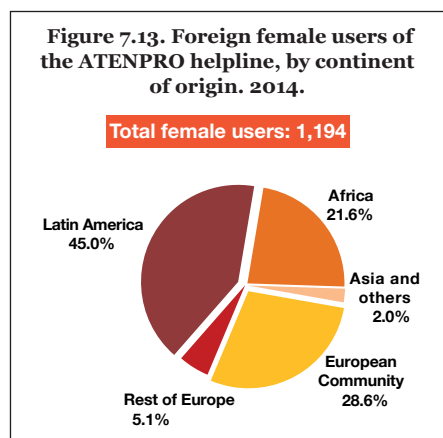

7.4.3. Nationality of female users and aggressors. 1 January to 31 December 2014.

Data on the country of birth of the females who used the service in 2014 are available in 15,421 cases. Of that number, 92.3% were Spanish nationals and 7.7% were foreign nationals.

The nationality of the alleged aggressor is known in 12,699 cases. Of that number, 77.5% were Spanish nationals and 18.1% were foreign nationals.

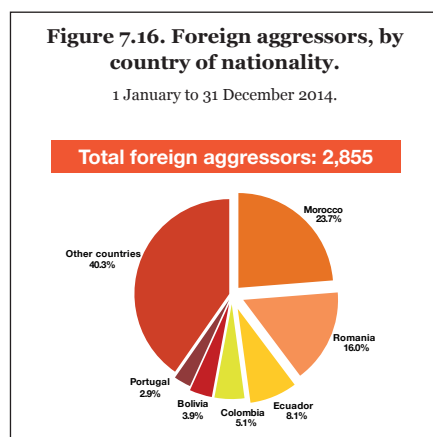

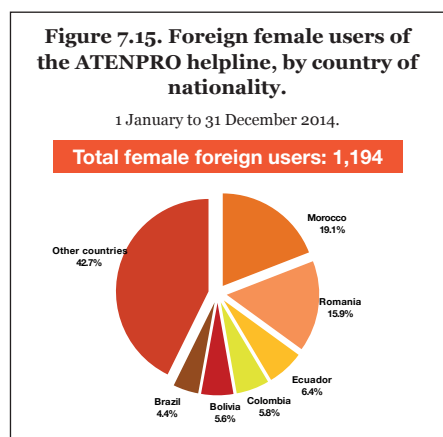

By continent, the trend of previous years was maintained — the biggest groups of foreign victims originated from Latin American (45%), EC Member States (28.6%) and Africa (21.6%). The smallest groups were from Asia (2%) and European countries not part of the EC (5.1%).

With regard to aggressors, the majority originated from Latin America (30.5%), Africa (30.2%) and EC Member States (29.4%).

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

By country of birth of foreign female users registered with the ATENPRO service in 2014, Moroccans and Romanians were the most numerous, accounting for 35% of all foreign-born female users. Similarly, Moroccans and Romanians accounted for 39.8% of all foreign-born aggressors.

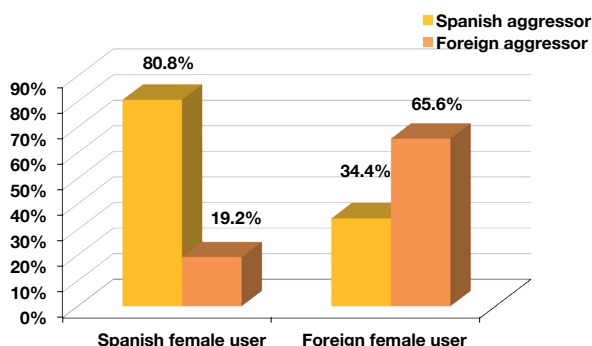

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

The nationalities of both female user and aggressor were known in 6,343 cases. The figure shows that 80.8% of aggressors of Spanish female users were also Spanish, while the proportion of foreign victims who suffered abuse at the hands of non-Spanish nationals stood at 65.6%.

Figure 7.17. Female users, by nationality and aggressor nationality.

7.4.4. Size of female ATENPRO users' place of residence. 1 January to 31 December 2014.

The size of the place of residence of female users registered with the ATENPRO service at some point in 2014 is known in 17,357 cases. The table below reveals that the majority lived in towns and cities with between 50,001 and 200,000 inhabitants. This group also presents the highest ratio per million females aged 15 and over (1,182.7).

Table 7.7. Registered female users of the ATENPRO helpline, by size of place of residence.

1 January to 31 December 2014.

| | SIZE OF PLACE OF RESIDENCE | | | |
|----------------|----------------------------|---------------|------------------------------------|--|
| | Female users | Vertical % | Female population aged 15 and over | Ratio per million females aged 15 and over |

SUBSIDISED EMPLOYMENT CONTRACTS FOR FEMALE VICTIMS OF VIOLENCE

(1 January 2003 to 31 December 2014)

AND SUBSTITUTION CONTRACTS FOR VICTIMS OF GENDER-BASED VIOLENCE

(1 January 2005 to 31 December 2014).

8.1. SUBSIDISED EMPLOYMENT CONTRACTS FOR FEMALE VICTIMS OF VIOLENCE. 2014.

According to data provided by the State Public Employment Service, in 2014 a total of 7,303,025 women signed employment contracts. The total number of women on subsidised employment contracts under measures designed to encourage employment stood at 127,854. Of that number, 725 (0.57%) were subsidised employment contracts for female victims of violence (0.07% more than in 2013). The figures reveal that the vast majority of subsidised employment contracts for female victims of violence were signed by victims of gender-based violence (91.2% of cases).

8.2.7. Subsidised employment contracts for female victims of violence, by autonomous community.

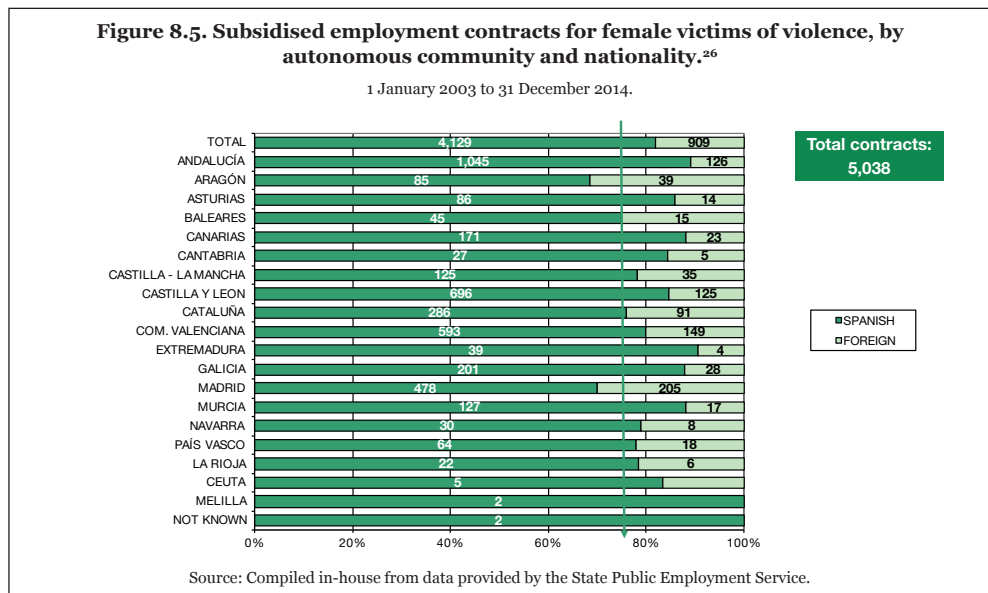

1 January 2003 to 31 December 2014.

Between 2003 and 2014, of the total number of subsidised employment contracts signed by female victims of violence in Spain, 23.2% were entered into in Andalucía, 16.3% in Castilla y León, 14.7% in Comunidad Valenciana and 13.6% in Madrid.²⁵

8.2.8. Subsidised employment contracts for female victims of violence, by autonomous community and nationality.

1 January 2003 to 31 December 2014.

The autonomous communities in which the greatest percentages of contracts were signed by foreign nationals were Aragón, Madrid, Baleares and Cataluña.

25. See Table 8.11 at the end of the chapter.

26. The autonomous community is not known in two cases.

8.3. SUBSTITUTION CONTRACTS FOR EMPLOYED FEMALE VICTIMS OF GENDER-BASED VIOLENCE

1 January 2005 to 31 December 2014.

Between 2005 and 2014, a total of 1,697 substitution contracts for employed female victims of gender-based violence were registered.

The data for substitution contracts for employed female victims of gender-based violence (which can be signed by both men and women) show a steady increase between 2005 and 2013. However, in the last year in the period under review the number fell abruptly, plummeting by 73.5%.

In 2014, a total of 143 substitution contracts for victims of gender-based violence were signed. In 104 cases, employed female victims of gender-based violence were substituted by women while in the other 39 they were substituted by men.

Table 8.10. Substitution contracts for employed female victims of gender-based violence, by year contract signed.

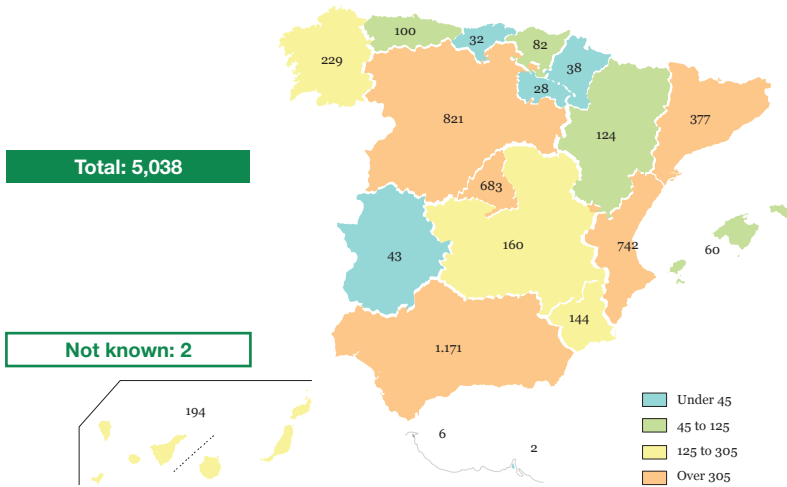

1 January 2005 to 31 December 2014 (including percentage year-on-year variation).

27. A specific code was not used to identify subsidised employment contracts for female victims of gender-based violence until December 2006. As a result, the data provided in this chapter refer to female victims of violence (domestic or gender-based).

The ratio of victims of violence receiving the RAI per million females aged 16 and over stood at 1,714.5. The highest ratio of beneficiaries was found in the 21–30 age group (3,761.8). This was the case in 16 of Spain's 17 autonomous communities (the only exception being Cantabria) and in its two autonomous cities.

Source: Compiled in-house from data provided by the State Public Employment Service and extracted from the municipal population register provided by the National Statistics Institute.

Taking into account the size of the female population in the respective autonomous communities, Canarias, followed by Andalucía and Comunidad Valenciana, had the highest ratios of female recipients of the RAI benefit per million females aged 16 and over. At the other end of the scale, País Vasco, Navarra, Madrid and Galicia were the four autonomous communities with the lowest ratios of female RAI recipients per million women.

Cádiz was the province with the highest ratio of recipients per million females aged 16 and over. It was followed by Jaén, Granada and Almería. Meanwhile, Guipúzcoa, Segovia and Zamora were the ones with the lowest ratios.

Figure 9.4. Female victims of violence receiving the RAI, by province. Ratio per million females aged 16 and over. 2014.

9.2. CHANGES IN NUMBERS OF FEMALE VICTIMS OF VIOLENCE RECEIVING THE RAI.

1 January 2006 to 31 December 2014.

Between 2006 and 2014, a total of 214,896 female victims of violence received the RAI. The number of victims of violence benefiting from it increased over the period under review, rising by 216.3% between 2006 and 2014.

Thus, the ratio of recipients per million females aged 16 and over rose from 566.2 in 2006 to 1,714.5 in 2014, an increase of 202.8%.

9.3. FEMALE VICTIMS OF VIOLENCE RECEIVING THE RAI, BY AUTONOMOUS COMMUNITY AND YEAR.

1 January 2006 to 31 December 2014.

As the table shows, Andalucía is the autonomous community with the highest number of female victims of violence receiving the RAI benefit, followed by Comunidad Valenciana. Between them, they accounted for over 42% of women receiving this benefit in every year of the period under review.

Table 9.4. Changes in numbers of employed female victims of violence receiving the RAI, by autonomous community and year. 2006–2014.

9.4. FEMALE VICTIMS OF VIOLENCE RECEIVING THE RAI, BY NATIONALITY.

1 January 2006 to 31 December 2014.

Between 2006 and 2014, the percentage of Spanish nationals receiving the RAI as a proportion of the total fell, dropping from 86.6% in 2006 to 76.3% in 2014. However, between 2013 and 2014 the number rose, increasing from 75.2% in 2013 to 76.3% in 2014.

9.5. FEMALE VICTIMS OF VIOLENCE RECEIVING THE RAI, BY AGE.

1 January 2006 to 31 December 2014.

Between 2006 and 2014, beneficiaries aged between 21 and 50 made up around 85% of the total, with this percentage rising slightly each year from 2011 onwards. Over a third of female victims of violence receiving the RAI were aged between 31 and 40, with this age bracket being the largest across almost all of Spain's autonomous communities²⁸.

9.7. EMPLOYED FEMALE VICTIMS OF GENDER-BASED VIOLENCE WHO SUSPENDED OR TERMINATED THEIR EMPLOYMENT CONTRACTS WHILE PRESERVING THEIR RIGHT TO RECEIVE UNEMPLOYMENT BENEFIT OR INCOME SUPPORT.

1 January 2006 to 31 December 2014.

The number of women who suspended or terminated their employment contracts while preserving their right to receive unemployment benefit increased between 2006 and 2011 before decreasing slightly from that year onwards. In 2014, the number of women receiving contributory unemployment benefit was 8.2% below the 2013 figure.

10 RECIPIENTS OF THE FINANCIAL AID ESTABLISHED UNDER ARTICLE 27 OF THE COMPREHENSIVE PROTECTION LAW. 1 January 2006 to 31 December 2014.

10.1. RECIPIENTS OF THE FINANCIAL AID ESTABLISHED UNDER ARTICLE 27 OF THE COMPREHENSIVE PROTECTION LAW. 2014.

In 2014, financial aid was granted to 606²⁹ female victims of gender-based violence under Article 27 of the Comprehensive Protection Law, 25.73% more than in 2013 (482).

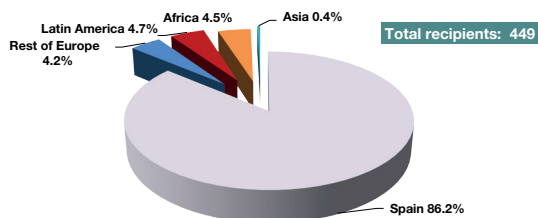

Of the total number of recipients of this aid in 2014, the age is known in 466 cases. Of those, 62% (289) were aged between 31 and 50.

In 2014, the nationality was known of 449 recipients of the financial aid established under Article 27 of the Comprehensive Protection Law. Of that number, 86.2% (387) were Spanish nationals and 13.8% (62) were foreign nationals. Among the foreign recipients of this financial aid, Latin American and African women accounted for 66.1% (41).

29. Information for Murcia is only available from 2013 onwards, while the data for País Vasco have only been updated from 2008 onwards.

10.6. AMOUNT OF FINANCIAL AID GRANTED UNDER ARTICLE 27 OF THE COMPREHENSIVE PROTECTION LAW.³²

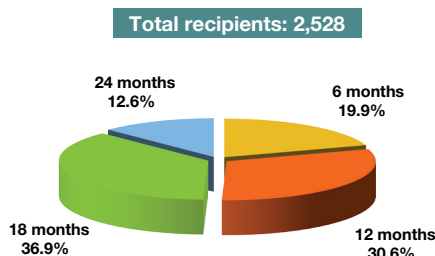

1 January 2006 to 31 December 2014.

In general, the amount of this aid is equivalent to six months' unemployment benefit. Aid can be equivalent to 12, 18 or 24 months' unemployment benefit according to the recipient's family responsibilities and, where appropriate, to the degree of officially recognised disability (applicable to the recipient, family members under her care or minors living under her roof).

Of the allowances granted for which the duration is known, basic or general aid (6 months' unemployment benefit) accounted for 19.9%. At the other end of the scale, the highest aid allowances (24 months' benefit) were received by 12.6% of claimants. The majority of recipients (36.9%) received 18 months' unemployment benefit.

11 TEMPORARY RESIDENCE AND WORK PERMITS GRANTED TO FOREIGN FEMALE VICTIMS OF GENDER-BASED VIOLENCE AND RESIDENCE PERMITS GRANTED TO APPLICANTS' CHILDREN. 1 January 2005 to 31 December 2014.

The legislation applicable to foreign nationals resident in Spain (excluding EU/EEA/Swiss citizens and their relatives) is set forth primarily in Organic Law 4/2000 of 11 January 2000 on the rights and freedoms of foreign nationals in Spain and social integration thereof.

This law has been amended many times since initial enactment. In relation to gender-based violence, until 2009 Article 30.3 of the law allowed for the issue of temporary residence permits on humanitarian grounds on condition of compliance with applicable regulatory criteria. The regulation in force until then (implemented by Royal Decree 2393/2004 of 30 December 2004 passing the regulation governing Organic Law 4/2000 of 11 January 2000 on the rights and freedoms of foreign nationals in Spain and social integration thereof) established a series of circumstances under which these permits could be issued. One of these was “victims of crimes deriving from violent conduct in the home under the terms set forth in Law 27/2003 of 31 July 2003 regulating the order protecting victims of domestic violence, provided that the aggressor has been sentenced for such crimes.” These permits were valid for one year.

In 2009, Organic Law 2/2009, of 11 December 2009, which amended Organic Law 4/2000 of 11 January 2000 introduced Article 31a (in effect since 13/12/09), which allowed for the issue of temporary residence permits on the grounds of exceptional circumstances specific to victims of gender-based violence.

One of the new features of this article is that it allowed for the issue of a provisional permit as soon as a protection order is issued or, in the absence of this, upon receipt of a report by the Public Prosecutor’s Office indicating detection of signs of gender-based violence. Likewise, upon issue of a conviction or court decision indicating that the woman has been a victim of gender-based violence, a five-year permit is issued.

In 2011, Organic Law 10/2011 of 27 July 2011 (in effect from 29/07/11), amended Article 31a and included in the law, among other considerations, permits for the children of female victims of gender-based violence.

The new regulation governing Organic Law 4/2000, brought into effect by Royal Decree 557/2011, of 20 April 2011, implemented the issue of these new permits under Articles 131 to 134. From 2011 onwards, issue of temporary residence and work permits to female victims of gender-based violence and their children on the grounds of exceptional circumstances was governed by the amendment to Article 31a of Organic Law 4/2000, amended by Organic Law 10/2011 and by Article 133 of Royal Decree 557/2011. These permits were issued to foreign female victims of gender-based violence with illegal immigrant status.

Following these amendments, provision for issue of residence due to exceptional circumstances granted on humanitarian grounds to victims of domestic violence (currently regulated by Article 126.1 of the regulation) remains in effect and is applicable to other victims of domestic violence.

These regulatory changes made it necessary to review and update existing databases. Consequently, this report only includes data on victims of gender-based violence from 2011 onwards, but maintains the information available on previous years, which included data on female victims of domestic and gender-based violence.

It should be noted that the data extracted from the application refer to the number of permits granted, not to the number of women. A very high proportion of definitive permits (although not all) will have been issued to women previously granted provisional permits.

11.1. APPLICATIONS FOR TEMPORARY RESIDENCE AND WORK PERMITS BY FOREIGN FEMALE VICTIMS OF DOMESTIC AND GENDER-BASED VIOLENCE.

1 January 2005 to 31 December 2014

Between 1 January 2005 and 31 December 2010, applications for temporary residence and work permits were submitted on the grounds of domestic and gender-based violence. Since 2011, only the data relative to gender-based violence are considered. Between 2011 and 2014, a total of 7,266 applications for temporary residence and work permits were submitted on these grounds. Of these, 1,430 applications were made for children under 18 or for disabled children of these women (19.7%).

Source: Compiled in-house from data provided by the Ministry of Public Administration and Finance.

A decision was made on around 93.4% of applications received between 2011 and 2014 and, of these, residence permits were granted in 79.2% of cases. In the case of female victims of gender-based violence, the percentage of permits granted stood at 74%. In the case of male children, permits were granted in 72.7% of cases and, in that of female children, in 75.5%.

11.2. TEMPORARY RESIDENCE AND WORK PERMITS GRANTED TO FOREIGN FEMALE VICTIMS OF DOMESTIC AND GENDER-BASED VIOLENCE.

1 January 2005 to 31 December 2014

The table below shows the numbers of temporary residence and work permits granted to female victims of domestic and gender-based violence between 2005 and 2010. It also shows the numbers of temporary residence and work permits issued to female victims of gender-based violence between 2011 and 2014, showing both by year of issue of the decision. From 2013 onwards, the data show a decrease in the number of permits granted.

Table 11.3. Residence and work permits granted, by type of violence and year of issue of decision. Year-on-year variation (%). 2005–2014.

11.2.1. Temporary residence and work permits granted to foreign female victims of gender-based violence, by autonomous community and province. 1 January 2011 to 31 December 2014

In the last four years of the period, 5,263 residence and work permits were granted on the grounds of gender-based violence. The breakdown by autonomous community is shown in the figure below.

Figure 11.2. Breakdown of residence and work permits granted on the grounds of gender-based violence, by autonomous community. 2011–2014.

Source: Compiled in-house from data provided by the Ministry of Public Administration and Finance.

By autonomous community, and since 2011, in Andalucía 988 permits were issued (accounting for 18.8% of the total), in Cataluña 849 were issued (16.1%), in Comunidad Valenciana 827 were issued (15.7%) and in Madrid 764 were issued (14.5%). Those four autonomous communities accounted for 65.1% of all permits granted.

By province/autonomous city, Melilla recorded the greatest increase — in the last year — in the number of residence and work permits granted (150%). It was followed by Segovia and Jaén, which recorded increases of 100% and 82.4%, respectively.

Madrid, Barcelona and Valencia were the provinces in which the highest numbers of permits were granted. Those three accounted for 34.1% of all permits granted in the period under review.

11.3. SOCIO-DEMOGRAPHIC CHARACTERISTICS OF PERSONS APPLYING FOR TEMPORARY RESIDENCE AND WORK PERMITS ON THE GROUNDS OF GENDER-BASED VIOLENCE.

1 January 2011 to 31 December 2014

As regards the socio-demographic characteristics of the persons applying for temporary residence and work permits on the grounds of gender-based violence, both age and nationality are known.

11.3.1. Age.

In relation to age, between 2011 and 2014, 80.3% of residence and work permits granted on the grounds of gender-based violence were issued to female victims thereof while the other 19.7% were issued to their children (either aged under 18 or with disabilities).

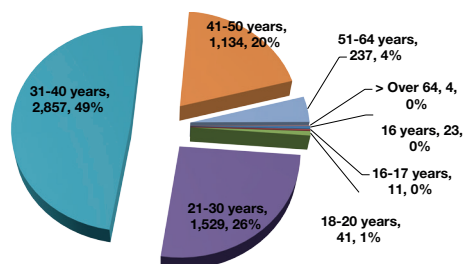

Table 11.9. Temporary residence and work permits granted on the grounds of gender-based violence, by age group and applicant profile. 2011–2014.

| | Total 2011-2014 | Vertical % | Females (2011-2014) | Children under 18 or with disabilities (2011-2014) | Females (horizontal %) |
|--------------|--------------------|-------------|------------------------|--|---------------------------|
| Total | 7,266 | 100% | 5,836 | 1,430 | 80.3% |
| < 16 | 1,105 | 15.2% | 23 | 1,082 | 2.1% |
| 16-17 | 149 | 2.1% | 11 | 138 | 7.4% |

12 GENDER-BASED VIOLENCE OFFENDERS SERVING PRISON OR ALTERNATIVE SENTENCES.

Data as at 31 December 2014.

The Government Office for Gender-based Violence has compiled this report from the data provided by the Secretariat-General for Penitentiary Institutions, which reports to Spain’s Ministry of the Interior within the territory administered by national government. The data on prisoners serving sentences refer to convicted offenders, within the territory administered by national government, currently in prison for crimes of gender-based violence or sentenced in cases heard by courts for gender-based violence. The data on prisoners on remand refer to detainees, within the territory administered by national government, currently in prison or held during ongoing criminal proceedings relating to any crime of gender-based violence or to any case heard by courts for gender-based violence.

As at 31 December 2014, a total of 5,489 offenders were serving prison sentences for crimes of gender-based violence. Of that number, 318 were serving sentences for manslaughter or murder as their main crime.

Figure 12.1. Gender-based violence offenders serving prison sentences, by type of crime. 2009–2014.

12.1. GENDER-BASED VIOLENCE OFFENDERS SERVING SENTENCES IN PRISONS ADMINISTERED BY NATIONAL GOVERNMENT, BY AGE GROUP.

Data as at 31 December 2014.

Overall, 33.3% (1,829) of gender-based violence offenders serving prison sentences were aged between 31 and 40, while 30.4% (1,671) were aged between 41 and 50.

Figure 12.2. Gender-based violence offenders serving sentences in prisons administered by national government, by age group.

Data as at 31 December 2014.

12.2. GENDER-BASED VIOLENCE OFFENDERS SERVING SENTENCES IN PRISONS ADMINISTERED BY NATIONAL GOVERNMENT, BY NATIONALITY.

Data as at 31 December 2014.

By nationality, 80.2% (4,401) of gender-based violence offenders serving prison sentences were Spanish, while the remaining 19.8% (1,087) were foreign nationals.

Figure 12.3. Percentage breakdown of gender-based violence offenders serving sentences in prisons administered by national government, by nationality and year.

Data as at 31 December 2009-2014.

Source: Compiled in-house from data provided by the Secretariat-General for Penitentiary Institutions.

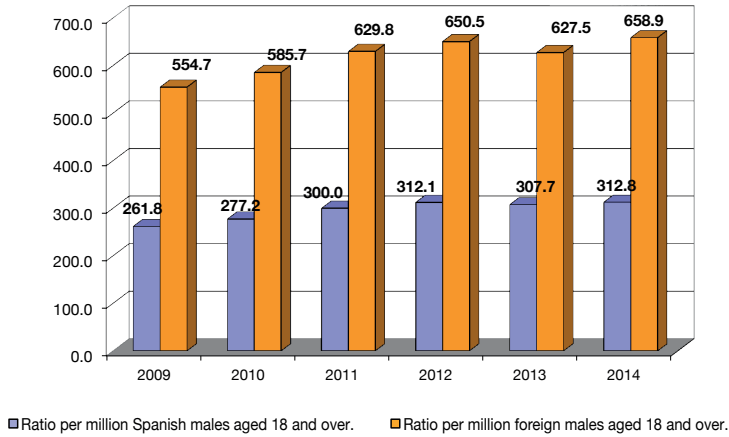

From 2009 onwards, the ratio of gender-based violence offenders serving prison sentences per million males aged 18 and over rose every year except 2013, when it fell slightly for both Spanish and foreign nationals. In the former case, from 2009 onwards the ratio increased by 19.5% while in the latter (foreign offenders) it rose by 18.8%. In comparison with 2013, the ratio per million males aged 18 and over increased by 1.6% for Spanish nationals and by 5% for foreign nationals.

In every year between 2009 and 2014, the ratio of foreign gender-based violence offenders serving prison sentences was practically twice that of Spanish nationals.³³

33. To calculate these ratios, nationality data as at 1 January of each year under review were drawn from the municipal population register for all persons aged 18 and over. Although foreign nationals may be entered in the municipal population register irrespective of their immigration status, it is feasible that immigration legislation and policy have had some influence on the variations in the figures.

Figure 12.4. Gender-based violence offenders serving sentences in prisons administered by national government, by nationality. Ratio per million males aged 18 and over.

Data as at 31 December 2009–2014. ³⁴

Source: Compiled in-house from data provided by the Secretariat-General for Penitentiary Institutions and the National Statistics Institute Statistics taken from the municipal population register (www.ine.es).

In 2014, of the total number of foreign gender-based violence offenders serving prison sentences, 35.1% were Latin American, 31.2% were African and 27.9% were European.

Figure 12.5. Gender-based violence offenders serving sentences in prisons administered by national government, by continent of origin.

Data as at 31 December 2014.

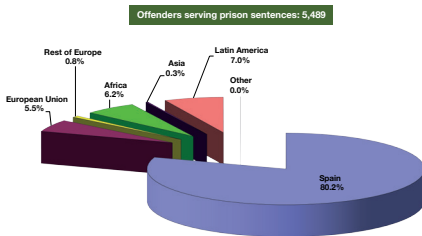

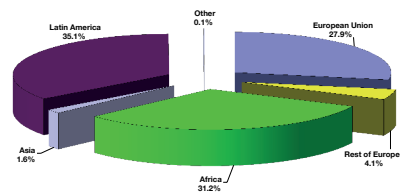

Figure 12.6. Foreign gender-based violence offenders serving sentences in prisons administered by national government, by continent of origin.

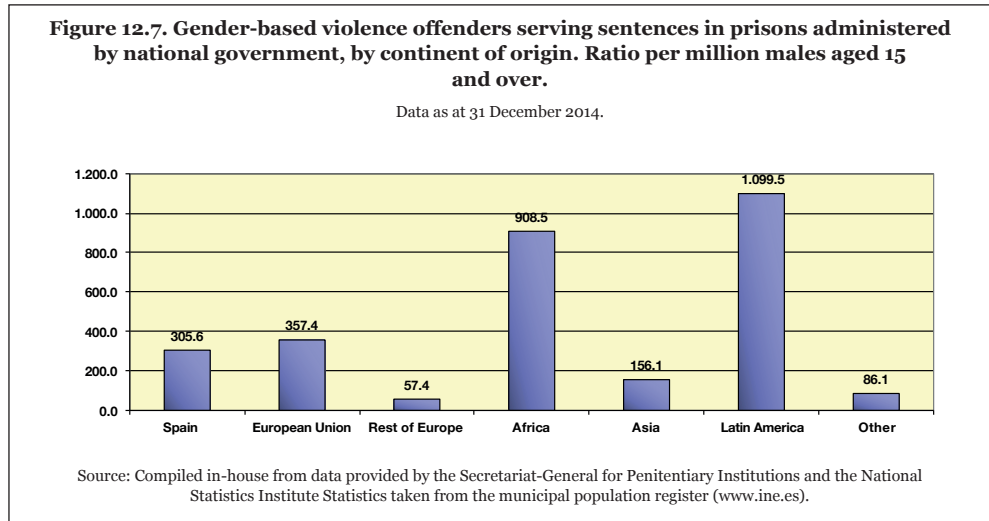

Data as at 31 December 2014.

Source: Compiled in-house from data provided by the Secretariat-General for Penitentiary Institutions.

34. As these data refer to offenders serving sentences in prisons administered by national government, the ratios do not include the population serving sentences in Cataluña

The figure below shows the total number of gender-based violence offenders serving prison sentences by continent of origin and compares that figure against the respective male populations in Spain aged 15 and over.³⁵ In 2014, the ratios were highest among Latin Americans and Africans.

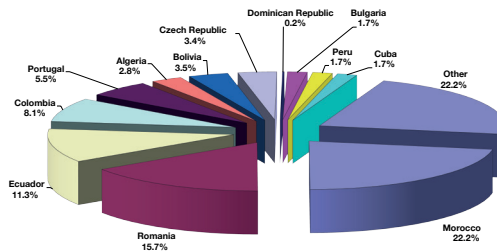

As at 31 December 2014, 22.2% of foreign gender-based violence offenders serving prison sentences were Moroccan, 15.7% were Romanian and 11.3% were Ecuadorian.

35. As the INE disaggregates foreign population data by country or continent of origin in five-year age brackets, the ratios of offenders serving prison sentences by country and continent of origin have been calculated against the population aged 15 and over. However, in the case of Spanish or foreign nationality the National Statistics Institute publishes the population age data by year, making it possible to calculate the ratio of gender-based offenders serving prison sentences directly against the ratio of prison inmates, as these are all aged over 18.

12.3. GENDER-BASED VIOLENCE OFFENDERS SERVING SENTENCES IN PRISONS ADMINISTERED BY NATIONAL GOVERNMENT, BY DECLARED HABITUAL PLACE OF RESIDENCE (AUTONOMOUS COMMUNITY).

Data as at 31 December 2014.

By autonomous community, Andalucía (1,331), Comunidad Valenciana (825) and Madrid (621) were the three regions with the highest numbers of gender-based violence offenders serving prison sentences.

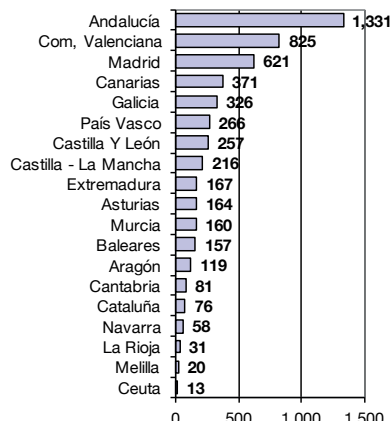

Table 12.1. Gender-based violence offenders serving sentences in prisons administered by national government, by declared habitual place of residence (autonomous community).

Data as at 31 December 2014.

Data as at 31 December 2014.

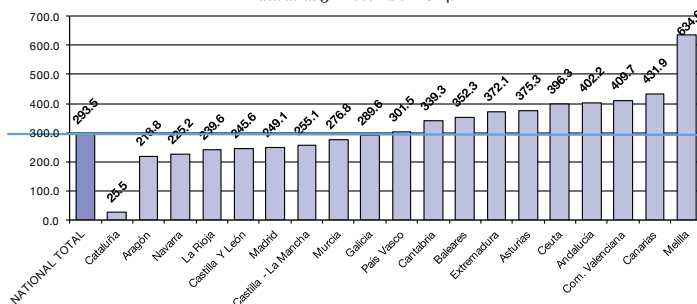

Source: Compiled in-house from data provided by the Secretariat-General for Penitentiary Institutions.

The highest ratios of gender-based violence offenders serving prison sentences per million males aged 18 and over were recorded in Melilla (634.6) and Canarias (431.9). The lowest ratios were registered in Cataluña³⁶ (25.5) and Aragón (218.8).

Figure 12.11. Gender-based violence offenders serving sentences in prisons administered by national government, by declared habitual place of residence (autonomous community). Ratio per million males aged 18 and over.

Data as at 31 December 2014.

Source: Compiled in-house from data provided by the Secretariat-General for Penitentiary Institutions and the National Statistics Institute. Statistics taken from the municipal population register (www.ine.es).

36. The data on gender-based violence offenders serving prison sentences were provided by the national government. The data do not include offenders held in penitentiary centres in Cataluña. The data on offenders held in Cataluña refer to offenders whose declared habitual place of residence is Cataluña but who are serving sentences in prisons administered by the national government.

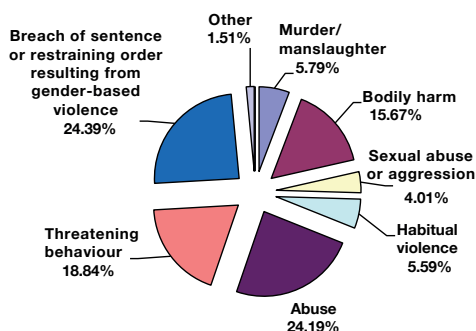

12.4. GENDER-BASED VIOLENCE OFFENDERS SERVING SENTENCES IN PRISONS ADMINISTERED BY NATIONAL GOVERNMENT, BY TYPE OF CRIME.

Data as at 31 December 2014.

With regard to type of crime, the main crime committed by 24.39% (1,339) of gender-based violence offenders serving prison sentences was breach of sentence or restraining order. This was followed by abuse (24.19%; 1,328), threatening behaviour (18.84%; 1,034) and bodily harm (15.67%; 860).

Figure 12.12. Percentage breakdown of gender-based violence offenders serving sentences in prisons administered by national government, by type of crime.

Data as at 31 December 2014.

Source: Compiled in-house from data provided by the Secretariat-General for Penitentiary Institutions.

In 2014, the ratio of gender-based violence offenders serving prison sentences per million males aged 18 and over residing in Spain stood at 349.2. Meanwhile, the ratio of prisoners sentenced for abuse stood at 84.5, for breach of sentence or restraining order at 85.2 and for bodily harm at 54.7.

Source: Compiled in-house from data provided by the Secretariat-General for Penitentiary Institutions. National Statistics Institute (statistics taken from the municipal population register).

In 2014, the number of gender-based violence offenders serving prison sentences was 0.1% higher than in 2013. The numbers of prisoners serving sentences for murder or manslaughter (4.3%), sexual aggression or abuse (5.3%), breach of sentence or restraining order (13.6%) and threatening behaviour (17.2%) all rose, while the numbers for those serving sentences for habitual violence (-20.7%), abuse (-13.4%) and bodily harm (-4.1%) all fell.

12.5. GENDER-BASED VIOLENCE OFFENDERS SERVING SENTENCES IN PRISONS ADMINISTERED BY NATIONAL GOVERNMENT, BY LENGTH OF SENTENCE.

Data as at 31 December 2014.

By length of sentence, including all crimes as well as gender-based violence, as at 31 December 2014, 26.3% of prisoners were serving sentences of between 1 and 3 years, 22.6% were serving sentences of between 5 and 10 years and 18% were serving sentences of over 10 years. In terms of length of the longest sentence for gender-based violence offenders, the highest proportion of prisoners was serving sentences of between 6 months and 1 year (43%). This was followed by prisoners serving sentences of between 1 and 3 years (27.2%).

Figure 12.13. Gender-based violence offenders serving sentences in prisons administered by national government, by total length of sentence.

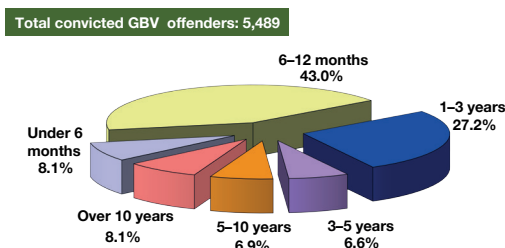

Data as at 31 December 2014.

Source: Compiled in-house from data provided by the Secretariat-General for Penitentiary Institutions.

12.6. GENDER-BASED VIOLENCE OFFENDERS SERVING SENTENCES IN PRISONS ADMINISTERED BY NATIONAL GOVERNMENT, BY AGE GROUP AND NATIONALITY.

Data as at 31 December 2014.

As mentioned above, 33.3% of gender-based violence offenders serving prison sentences in 2014 were aged between 31 and 40, while 30.4% were aged between 41 and 50. In the case of Spanish prisoners, these percentages stood at 31.3% and 31.6%, respectively, while for foreign prisoners they stood at 36.2% and 22.7%.

12.7. GENDER-BASED VIOLENCE OFFENDERS SERVING SENTENCES IN PRISONS ADMINISTERED BY NATIONAL GOVERNMENT, BY DECLARED HABITUAL PLACE OF RESIDENCE (AUTONOMOUS COMMUNITY) AND AGE GROUP.

Data as at 31 December 2014.

Among those prisoners who declared Navarra, Castilla y León or Cantabria to be their habitual place of residence, the percentage of offenders under 31 was higher than in the other autonomous communities. Navarra, Melilla and Canarias had the highest proportions of prisoners aged over 50 serving sentences for crimes of gender-based violence.

Table 12.6. Gender-based violence offenders serving sentences in prisons administered by national government, by declared habitual place of residence (autonomous community) and age group.

Data as at 31 December 2014.

12.8. GENDER-BASED VIOLENCE OFFENDERS SERVING SENTENCES IN PRISONS ADMINISTERED BY NATIONAL GOVERNMENT, BY DECLARED HABITUAL PLACE OF RESIDENCE (AUTONOMOUS COMMUNITY) AND NATIONALITY.

Data as at 31 December 2014.

As at 31 December 2014, Andalucía was the habitual autonomous community of residence of 27.2% of Spanish gender-based violence offenders serving prison sentences, while Madrid was the habitual autonomous community of residence for 19.9% of their foreign counterparts. The autonomous communities with the highest percentages of Spanish offenders were Extremadura (92.8%), Melilla (90%), Andalucía (89.9%) and Asturias (89.6%). Those with the highest percentages of foreign offenders were La Rioja (48.4%), Madrid (34.8%) and Aragón (33.6%).

Source: Compiled in-house from data provided by the Secretariat-General for Penitentiary Institutions.

Manslaughter and murder were principally committed by offenders older than other gender-based violence offenders. Overall, 31.1% of gender-based violence offenders serving prison sentences for manslaughter or murder were aged between 41 and 50, 25.8% were aged between 31 and 40, and 24.8% were aged between 51 and 64. For the other crimes, the highest proportion of offenders fell in the 31-40 age group.

12.13. GENDER-BASED VIOLENCE OFFENDERS IN PRISONS ADMINISTERED BY NATIONAL GOVERNMENT.

Data 2009-2014.

The section below describes the data published by the Ministry of the Interior as at 31 December between 2009 and 2014.

As at 31 December 2014, a total of 51,383 men were held in prisons administered by national government. Of that number, 43,618 were serving sentences, 6,562 were on remand and 1,203 were classified as having a status other than the aforementioned.

Table 12.17. Gender-based violence offenders in prisons administered by national government, by criminal proceedings status and gender. 2009–2014.

12.14. ALTERNATIVE PENALTIES AND MEASURES FOR CRIMES OF GENDER-BASED VIOLENCE.

Penitentiary institutions' fundamental aim is to re-educate and rehabilitate convicted offenders and re-integrate them into society. This principle is applicable both to imprisonment and to alternative penalties and measures. It is based on the conviction that human beings are capable of change, despite having committed a crime.

In our area of interest, the factors addressed in crimes of gender-based violence are a violent male (the convicted offender) and the possibility of him changing (the authorities' constitutional mandate).

The alternative penalties and measures to which gender-based violence offenders may be sentenced consist of community service or suspension or commutation – by judicial ruling – of imprisonment.

Under Article 83 of the Criminal Code, sentences suspending or commuting imprisonment must be accompanied by participation by the offender in a treatment programme appropriate to the type of crime, in this case gender-based violence.

The numerous rulings (25,650 in 2014) ordering convicted gender-based violence offenders to participate in a treatment programme or do community service indicates its significance as a form of alternative penalty and measure.

In this context, the PRIA aggressor treatment programme run by the Secretariat-General for Penitentiary Institutions is based on the following premises, among others:

1. It is implemented under final provision five of Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence.
2. It is a specific programme that spans pre-treatment assessment of the aggressor, psychological–educational treatment, post-treatment assessment and programme follow-up.

3. It requires implementation as soon after the crime as possible.
4. It addresses cognitive, behavioural and educational issues from a gender perspective.

It aims to eradicate all violent conduct towards the offender's partner, as well as to change sexist attitudes and beliefs. To achieve this, it focuses on:

- Increasing the aggressor's motivation to change.
- Developing the convicted offender's emotional awareness.
- Changing distorted views about male and female roles and those that justify use of violence.
- Raising awareness of the consequences of abuse of partners and children.
- Identifying and eliminating all forms of gender-based violence in the offender's relationship with his partner (including psychological and other forms of non-physical violence).
- Establishing equality-aware forms of behaviour in the offender's relationship with his partner.
- Coaching the offender to prevent recurrence of gender-based violence.

Setting up this programme required, and continues to do so, participation by appropriately **qualified experts** in this field. For this purpose, the prison administration service, in partnership with local colleges of psychologists, trained professionals from both within and outside the prison service throughout the territory administered by national government. It now works with a variety of partner organisations with expertise in this area.

The PRIA aggressor treatment programme applied to convicted offenders serving suspended or commuted sentences has been evaluated by two separate universities – the Institute of Forensic Science and Security at the Autonomous University of Madrid (UAM) and the Department of Sociology II within the Faculty of Social Sciences at the University of the Basque Country (UPV).

12.14.1. Glossary

Community service:

Sentence resulting in loss of rights that consists of the offender performing unpaid activities of public utility. Those tasks or activities of public utility have to be performed over the number of days established by the sentence. Community service can also be carried out via specific programmes.

Crimes of gender-based violence produce the second-highest number of sentences resulting in community service after traffic offences (road safety). In 2014, a total of 17,403 sentences of community service were issued for crimes of gender-based violence.

Suspended sentence:

Non-application, as per jurisdictional criteria, of a sentence resulting in imprisonment. In the context of gender-based violence, the most important consequence of this is obligatory participation by the offender in an aggressor treatment programme.

Commuted sentence:

Application of a penalty other than imprisonment, agreed as per jurisdictional criteria.

In cases of gender-based violence, imprisonment may be commuted for permanent monitoring of location or by community service. In addition, in the majority of cases, the offender is obliged to participate in an aggressor treatment programme.

In relation to these commuted sentences (permanent location monitoring and community service), the Subdirectorate-General for Alternative Penalties and Measures has the power to enforce sentences of community service and participation in the treatment programmes.

Rulings being processed:

Suspended/commuted sentences and sentences of community service received by the alternative sentences and measures services and for which the offender has been summoned (interviewed) to draw up an enforcement

plan for the sentence, and for which that plan has been produced but for which the programmes or community service established have not started, up to the date indicated in the plan.

Pending rulings:

Rulings received (judgements, sentences or orders) for which administrative processing will begin with the summons of the offender.

Completed rulings:

Judgements, orders and sentences complied with and filed.

13 ELECTRONIC MONITORING OF RESTRAINING ORDERS ON GENDER-BASED VIOLENCE OFFENDERS.

24 July 2009 to 31 December 2014.

13.1. CHANGES IN NUMBERS OF ELECTRONIC DEVICES. 2009–2014.

Between 24 July 2009 (when electronic monitoring of restraining orders on gender-based violence offenders began) and 31 December 2014, a total of 2,742 pairs of electronic devices were fitted. In the same period, 2,026 electronic devices were removed. Therefore, as at 31 December 2014, a total of 716 devices were active, 1.4% fewer than those active on 31 December 2013.

Table 13.1. Changes in number of active devices as at 31 December, and annual number of devices fitted and removed. 2009–2014.

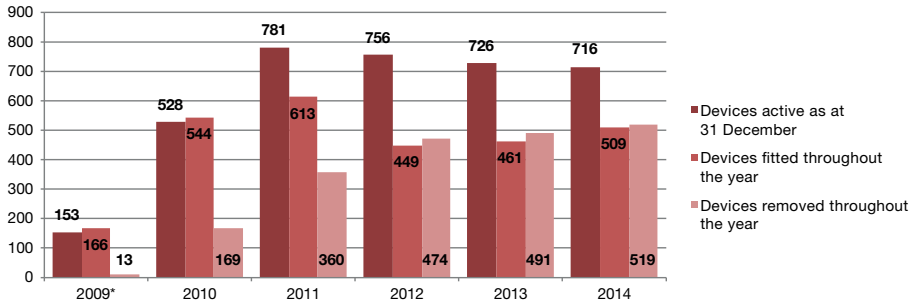

| | 2009* | 2010 | 2011 | 2012 | 2013 | 2014 |
|-------------------------------------|-------|------|---------|---------|--------|--------|
| Devices active as at 31 December | 153 | 528 | 781 | 756 | 726 | 716 |
| Year-on-year variation (%) | - | - | 47.9 % | -3.2 % | -4.0 % | -1.4 % |
| Devices fitted throughout the year | 166 | 544 | 613 | 449 | 461 | 509 |
| Year-on-year variation (%) | - | - | 12.7 % | -26.8 % | 2.7 % | 10.4 % |
| Devices removed throughout the year | 13 | 169 | 360 | 474 | 491 | 519 |
| Year-on-year variation (%) | - | - | 113.0 % | 31.7 % | 3.6 % | 5.7 % |

* The data for 2009 are from 24 July to 31 December. The 2009–2010 year-on-year variation is not calculated as the time spans differ.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

The figure below shows that the number of devices fitted in 2014 was 10.4% higher than in 2013. Similarly, the number of devices removed also increased in the last year of the period under review, rising by 5.7%.

Figure 13.1. Changes in number of active devices as at 31 December, and annual number of devices fitted and removed. 2009–2014.

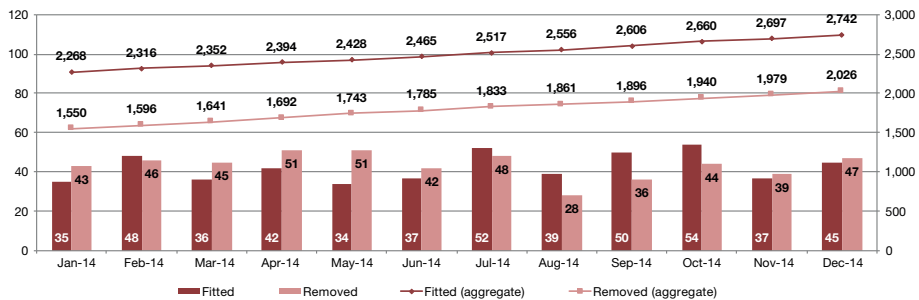

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

13.2. NUMBER OF ELECTRONIC DEVICES FITTED. 2014.

In 2014, a total of 509 electronic devices were fitted on grounds of gender-based violence, producing a monthly mean of 42 fittings. Over the year, 519 were removed, producing a monthly mean of 43 removals.

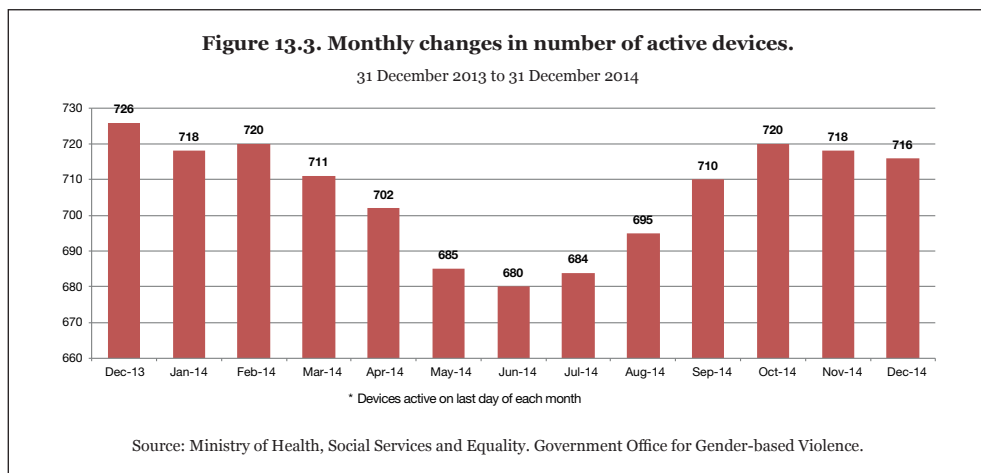

The following figure shows the numbers of devices fitted and removed each month. Most electronic devices were fitted in October (54), while most were removed in April and May (51 each month).

Figure 13.2. Electronic devices fitted and removed in 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

As regards the monthly changes in active devices throughout 2014, the figure below shows a steady fall in numbers in the first half of the year (dropping to 680 in June) followed by recovery in the second (reaching 720 active devices in October). The mean for the period under review was 707 active devices.

13.3. ELECTRONIC DEVICES FITTED, REMOVED AND ACTIVE, BY AUTONOMOUS COMMUNITY. 2014.

In 2014, of the 509 devices fitted, the highest number was fitted in Andalucía. This applied both to victims and aggressors, accounting for 133 (26.1%) and 131 (25.7%) of the respective totals. It was followed by Madrid, which was also the autonomous community in which the highest number of removals was recorded. In this case, of the 519 devices removed in 2014, victims accounted for 144 and aggressors for 145 (27.7% and 27.9%, respectively).

By aggregate device fittings since the service went into operation, Madrid and Andalucía also headed the ranking by absolute numbers. Thus, Madrid accounted for around 31% of all device fittings on both victims and aggressors and Andalucía for approximately 22%. The same was true for aggregate device removals, with the above two autonomous communities accounting for roughly 54% of devices removed from both victims and aggressors since the system for monitoring restraining orders on gender-based offenders went into operation.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Although 2,742 devices were fitted between July 2009 and December 2014, sometimes devices were fitted twice or more to the same couple at different times. Therefore, the total number of couples fitted with electronic devices over the period under review is lower than the number of devices.

The table below does not show the total number of devices fitted and removed but the total number of victims and aggressors for which electronic devices were fitted or removed. It shows the figures both for 2014 and for the entire period since the service went into operation. Thus, it reveals that the 2,742 devices fitted since the start of the service were fitted on 2,478 couples.

In 2014, the 509 fittings recorded correspond to 482 couples (with both victims and aggressors residing mainly in Andalucía). Likewise, the 519 devices removed in 2014 correspond to 476 couples (mainly comprising victims and aggressors residing in Madrid).

37. Although in the majority of cases the autonomous community of residence of the victim and her aggressor coincided, some couples did live in different autonomous communities. Consequently, the data are differentiated to show the victim's and aggressor's respective autonomous communities.

Table 13.3. Number of victims and aggressors with electronic devices (fitted and removed), by autonomous community of residence. 2014.

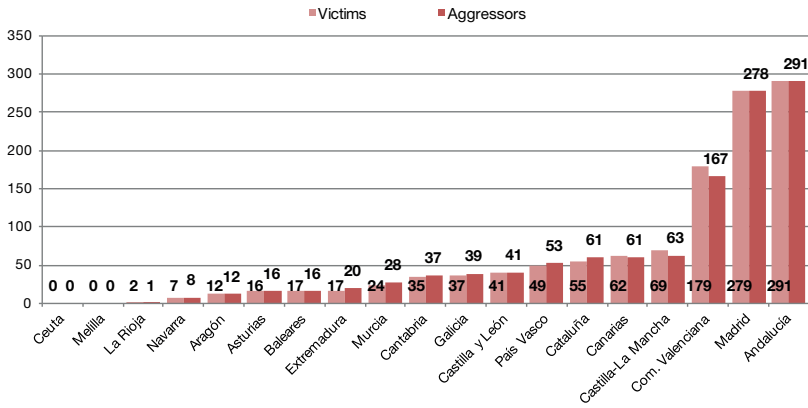

| AUTONOMOUS COMMUNITY | Devices fitted in 2014 (by couple) | | Devices removed in 2014 (by couple) | | Fitted since service start-up (aggregate couples) | | Removed since service start-up (aggregate couples) | | Electronic devices active in 2014 (by couple) | |

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

In total, 1,192 couples were recorded as active in the system for electronically monitoring restraining orders on gender-based violence offenders at some point in 2014. The breakdown by autonomous community is shown in the figures below.

These show that, as was the case with the numbers of devices fitted and removed, most of the victims and aggressors fitted with an electronic device at some point in 2014 lived in one of three autonomous communities: Andalucía, Madrid or Comunidad Valenciana. These three autonomous communities accounted for 62.8% of victims and for 61.7% of aggressors fitted with active electronic devices in 2014.

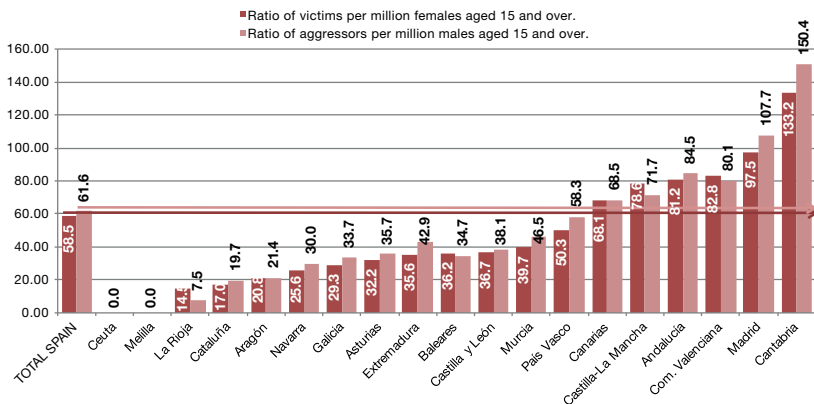

Figure 13.4. Victims and aggressors fitted with active electronic devices in 2014, by autonomous community of residence.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

In relative terms, and comparing the data per autonomous community against the respective populations of males and females aged 15 and over reveals that the autonomous communities with the highest ratios of active devices in 2014 were Cantabria and Madrid (for both victims and aggressors). They were followed by Comunidad Valenciana, Andalucía, Castilla-La Mancha and Canarias. All these autonomous communities were above the mean ratio for Spain, which stood at 61.6 aggressors with active devices in 2014 per million males aged 15 and over, and at 58.5 victims per million females aged 15 and over.

13.4. SOCIO-DEMOGRAPHIC CHARACTERISTICS OF VICTIMS AND AGGRESSORS FITTED WITH ELECTRONIC DEVICES. 24 July 2009 to 31 December 2014

As mentioned above, the 2,742 devices fitted correspond to 2,478 couples. In some cases, couples may have been fitted with devices on two or more occasions at different points in time. This section analyses the socio-demographic characteristics of the 2,478 victims and 2,478 aggressors who were recorded as active in the system in the period under review.

To analyse the age variable, the authors took as reference the age of the victims and aggressors when they entered the monitoring system. In those cases in which a couple was fitted with devices on more than one occasion, the authors have taken the age at the first fitting.³⁸ Thus, for the 2,478 couples, the age is known of 2,064 victims and of 2,111 aggressors. Mean age at the time of entry in the monitoring system was 37.2 in the case of the victims and 39.7 years in that of the aggressors.

Table 13.6. Mean age of victims and aggressors fitted with electronic devices, by year device fitted.

24 July 2009 to 31 December 2014

| | Age unknown | 367 | 31 | 91 | 76 | 63 | 52 | 54 |

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Year-by-year analysis of the mean age of new aggressors and victims fitted with devices reveals that between 2010 and 2013 the mean age of both tended to rise. This trend was reversed in 2014, when the mean age decreased slightly.

38. As stated in the previous tables, in 2014 a total of 482 couples were fitted with devices. For 448 couples, it was the first time that they were fitted with an electronic device.

Figure 13.14. Mean age of victims and aggressors fitted with electronic devices, by year device fitted.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Of the total number of couples fitted with electronic devices (2,478), the age of the victim is known in 2,064 cases and that of the aggressor in 2,111 cases. The table below shows victim and aggressor ages when fitted with devices, broken down by age group:

Table 13.7. Victims and aggressors fitted with electronic devices, by age group.

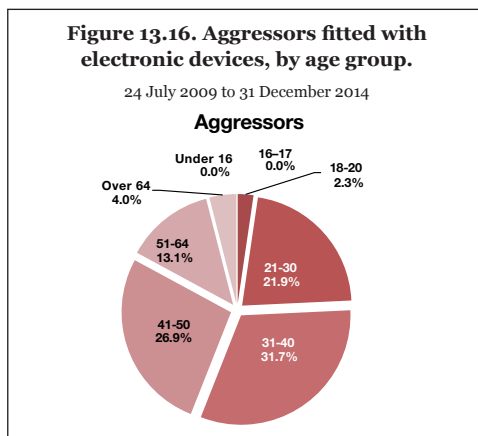

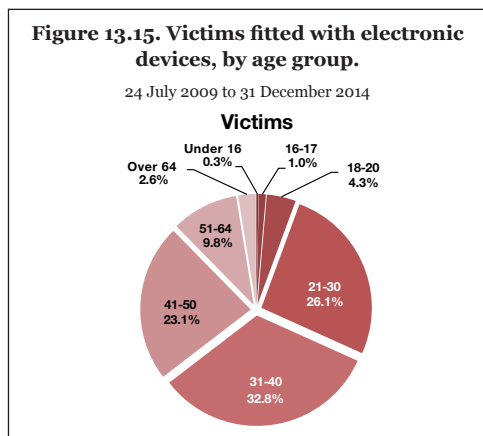

24 July 2009 to 31 December 2014

| | Victims | | Aggressors | |
|------------------|--------------|--------------|--------------|--------------|
| | Number | Vertical % | Number | Vertical % |
| Total | 2,478 | 100.0 | 2,478 | 100.0 |
| Under 16 | 7 | 0.3 | 0 | 0.0 |
| 16–17 | 21 | 1.0 | 0 | 0.0 |
| 18–20 | 88 | 4.3 | 49 | 2.3 |
| 21–30 | 539 | 26.1 | 463 | 21.9 |
| 31–40 | 678 | 32.8 | 670 | 31.7 |
| 41–50 | 476 | 23.1 | 568 | 26.9 |
| 51–64 | 202 | 9.8 | 277 | 13.1 |
| Over 64 | 53 | 2.6 | 84 | 4.0 |
| Not known | 414 | - | 367 | - |

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

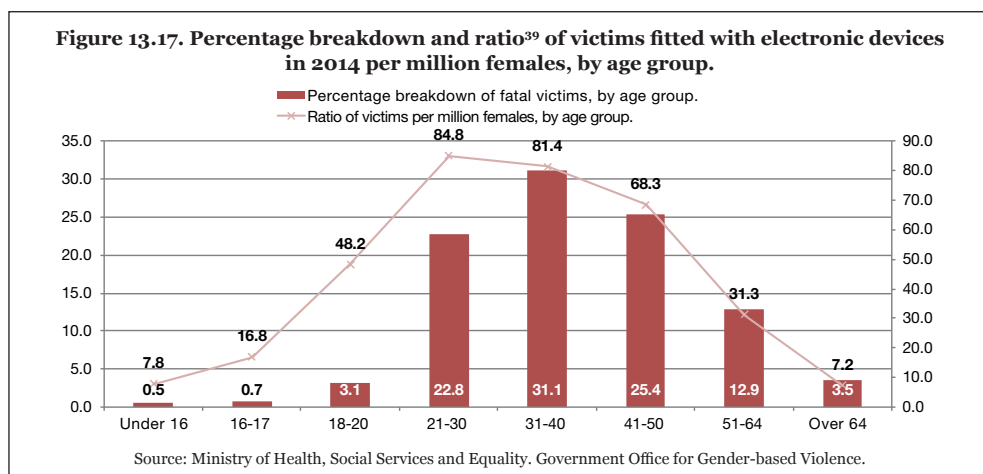

As the table shows, the vast majority of victims and aggressors were aged between 21 and 50 (representing 82% of victims and 80.6% of aggressors, similar proportions in both cases). However, the proportion of

victims in the younger age groups is higher than that of aggressors (31.7% of victims were under 30 as compared with 24.3% of aggressors).

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

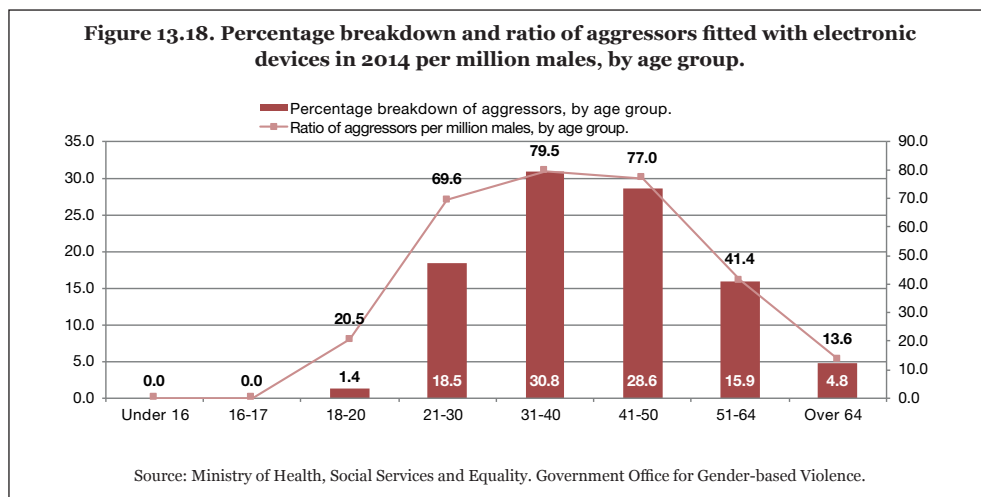

Looking at the 1,192 couples active in the monitoring system at some point in 2014, and at their ages that year, reveals that in the age groups over 40 the percentage of aggressors is always greater than that of victims while in the age groups under 40 the percentage of victims is greater than that of aggressors.

39. To calculate the ratios of victims of gender-based violence and their aggressors, the population aged 15 and over is taken as a reference. In this case, in which the ratios are calculated by age group, the reference taken for the ratio for victims aged under 16 is the population aged between 13 and 15, as victims of that age are registered in the monitoring system.

Analysing the ratios by age group shows that while the highest number of victims were in the 31–40 group (31.1%), the highest victim ratio was in the 21–30 age group (84.8 victims per million females). In addition, the ratios were higher among minors than among women aged over 65.

Among aggressors, the highest numbers were found in the 31–40 and 41–50 age groups, both of which also had the highest aggressor ratios.

Of the total number of couples fitted with electronic devices over the period under review, victim nationality is known in 2,466 cases and aggressor nationality in 2,467 (see table below). The data show that the number of foreign victims fitted with devices for the first time fell every year from 2010 onwards, as was likewise the case for foreign aggressors.

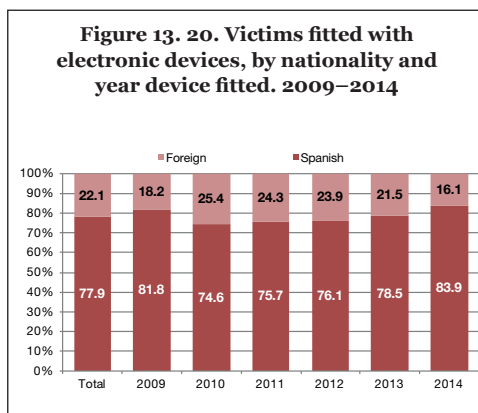

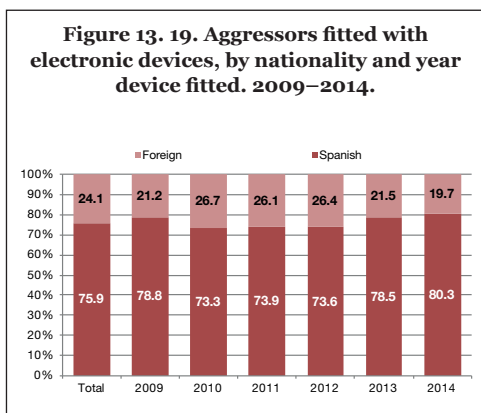

Table 13.8. Victims and aggressors fitted with electronic devices, by nationality and year device fitted. 2009–2014.

| | Total | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 |
|-------------------------|--------------|------------|------------|------------|------------|------------|------------|
| Total victims | 2,478 | 165 | 523 | 560 | 401 | 381 | 448 |
| Spanish | 1,920 | 135 | 387 | 424 | 303 | 296 | 375 |
| Foreign | 546 | 30 | 132 | 136 | 95 | 81 | 72 |
| Not known | 12 | 0 | 4 | 0 | 3 | 4 | 1 |
| Total aggressors | 2,478 | 165 | 523 | 560 | 401 | 381 | 448 |
| Spanish | 1,873 | 130 | 382 | 414 | 293 | 296 | 358 |

| Not known | 11 | 0 | 2 | 0 | 3 | 4 | 2 |

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

The fall in absolute numbers is reflected in the changes in the percentage of foreign victims and aggressors. Thus, among the new couples entering the monitoring system each year, the percentages of both foreign victims and foreign aggressors dropped from 2010 onwards.

In 2010, Spanish aggressors accounted for 73.3% of device fittings and foreign aggressors for 26.7%. In 2014, 80.3% of new aggressors fitted with devices were Spanish and 19.7% were foreign. This matches the trend among victims, where foreign females fell from accounting for 25.4% of new victims in 2010 to 16.1% in 2014.

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

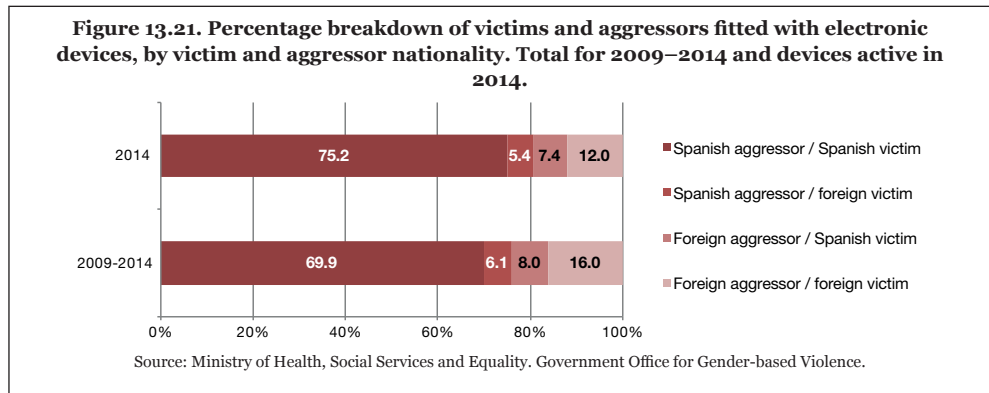

Within couples, both victim and aggressor nationality are known for 2,462 of the 2,478 couples fitted with devices since the electronic monitoring system went into operation. Among the 1,192 couples fitted with devices at some point in 2014, victim and aggressor nationality are known in 1,184 cases.

Table 13.9. Victims and aggressors fitted with electronic devices, by victim and aggressor nationality. Total for 2009–2014 and devices active in 2014.

| | Total couples (2009–2014) | | | Electronic devices active in 2014 (by couple) | | |
|--------------------------|---------------------------|----------------|----------------|---|----------------|----------------|
| | Total | Spanish victim | Foreign victim | Total | Spanish victim | Foreign victim |
| Total | 2,462 | 1,917 | 545 | 1,184 | 978 | 206 |
| Spanish aggressor | 1,870 | 1,720 | 150 | 954 | 890 | 64 |
| Foreign aggressor | 592 | 197 | 395 | 230 | 88 | 142 |

Source: Ministry of Health, Social Services and Equality. Government Office for Gender-based Violence.

Of the total number of couples entered in the system for monitoring restraining orders on gender-based offenders, those comprising Spanish victims and aggressors accounted for 69.9%. Among those fitted with active devices at some point in 2014, that proportion rose to 75.2%.

Analysing victim and aggressor nationality and age together reveals that while Spanish nationals accounted for greater proportions than foreign nationals above the age of 41, the reverse was true in the age groups under 40, where foreign victims and aggressors accounted for higher proportions than Spanish ones.

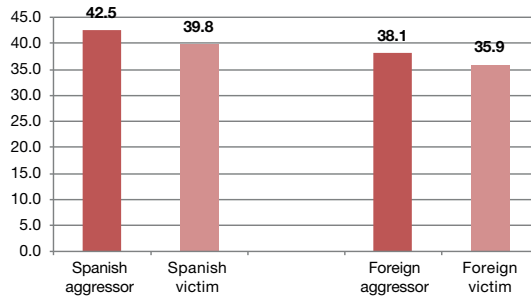

Table 13.10. Victims and aggressors fitted with active electronic devices in 2014, by nationality and age group.

The data show significant differences in mean age among the victims and aggressors recorded as active in the monitoring system in 2014. The figure below reveals that the mean age for Spanish aggressors stood at 42.5, almost four and a half years older than that of foreign aggressors (mean age of 38.1). A very similar difference exists between Spanish and foreign victims.

Figure 13.22. Mean ages of victims and aggressors fitted with active electronic devices in 2014.

14 STATISTICS ON DOMESTIC AND GENDER-BASED VIOLENCE

2014

Source: National Statistics Institute website (www.ine.es)

The number of victims of gender-based violence under protection order or precautionary measures entered in the register ⁴⁰ stood at 27,087 women, 0.1% fewer than in 2013.

The ratio of victims of gender-based violence stood at 1.3 per 1,000 females aged 14 and over.

Gender-based violence

Gender-based violence is understood to be any act of physical or psychological violence (including denial of sexual freedom, threatening behaviour, coercion and arbitrary deprivation of freedom) against a woman by a man who is or who has been her husband or who is or who has been in a similar relationship with her without cohabiting.

Victims of gender-based violence

In 2014, a total of 27,087 female victims of gender-based violence were entered in the register in cases in which precautionary measures or protection orders had been put in place, 0.1% less than the year before.

By age group, almost half the victims of gender-based violence (49.3%) were aged between 25 and 39, a figure similar to that recorded in 2013. Mean victim age stood at 36.4, again similar to the figure recorded the year before (36.2). In comparison with the previous year, the largest increases in victim numbers were recorded among females aged 65–74 and among those under 18.

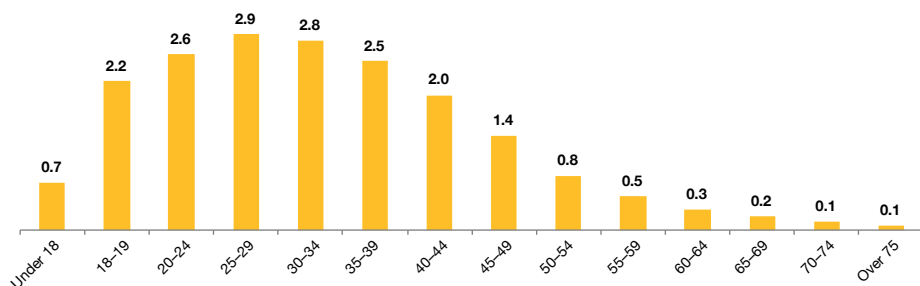

Table 14.3. Victims of gender-based violence under protection order or precautionary measures, by age group. 2013–2014.

Source: Compiled in-house from data provided by the National Statistics Institute.

The ratio of victims per 1,000 females aged 14 and over was nearly three times higher among those born outside Spain (3.0) than among those born in Spain (1.0).

Among the victims born outside Spain, the highest ratios were among those born in Africa and the Americas, while the lowest were recorded among those born in Asia and Oceania.

Figure 14.3. Victims of gender-based violence under protection order or precautionary measures, by place of birth. Ratios per 1,000 women aged 14 and over. 2013 and 2014.⁴²

By autonomous community, the highest numbers of victims entered in the register in 2014 on grounds of gender-based violence were recorded in Andalucía (7,012), Comunidad Valenciana (3,940) and Madrid (2,973). The lowest victim numbers were recorded in the autonomous cities of Ceuta and Melilla and in the autonomous community of La Rioja.

42. Ratios calculated as a proportion of the female population aged 14 and over based on provisional population figures as at 1 July 2014.

Source: Compiled in-house from data provided by the National Statistics Institute.

The greatest annual variations in the number of victims were recorded in Melilla (23.1%), La Rioja (19.0%) and Ceuta (-13.6%).

From 2011 onwards, the number of victims fell in every autonomous community/city except Melilla and La Rioja, where it increased by 16.4% and 6.4%, respectively. The largest decreases were recorded in Cataluña (-35.2%), Madrid (-27.4%), Asturias (-22.7%) and Canarias (-22.2%).

Figure 14.4. Variation in the ratio of victims of gender-based violence under protection order or precautionary measures between 2013 and 2011.

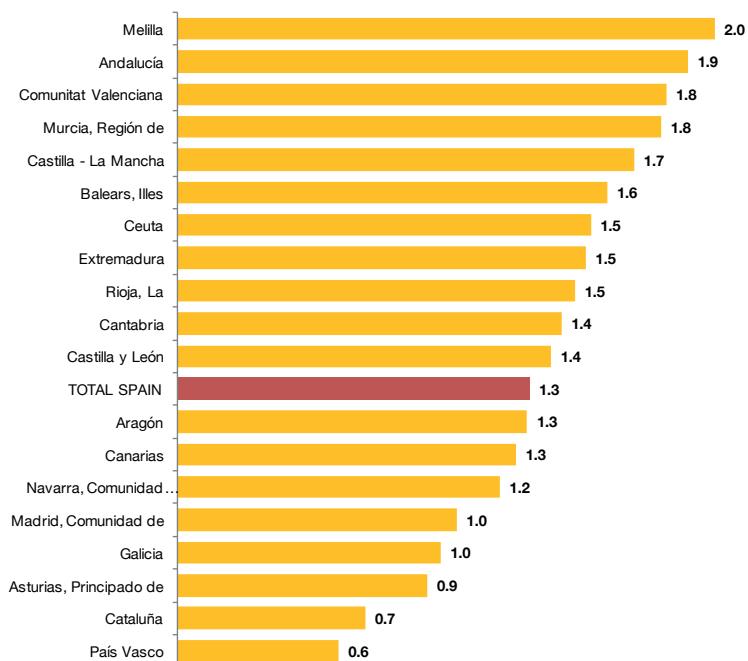

Source: Compiled in-house from data provided by the National Statistics Institute.

In relative terms, the highest ratios of victims of gender-based violence (per 1,000 females aged 14 and over) were recorded in the autonomous communities/cities of Melilla (2.0), Andalucía (1.9) and Comunitat Valenciana (1.8).

In contrast, País Vasco (0.6), Cataluña (0.7) and Asturias (0.9) had the lowest ratios.

Figure 14.5. Ratios of victims of gender-based violence under protection order or precautionary measures, by autonomous community/city in which the case was recorded (ratios per 1,000 females aged 14 and over).⁴³ 2014.

14.2. MALES REPORTED FOR GENDER-BASED VIOLENCE

In 2014, a total of 26,987 males were reported, and entered in the register, for acts of gender-based violence in cases in which protection orders or precautionary measures were in place, 0.1% less than the year before.

Nearly half of those reported (49.5%) were aged between 30 and 44. Mean reported aggressor age stood at 39.3.

The greatest increases in the number of males reported for gender-based violence were in the under-20 and over-75 age groups.

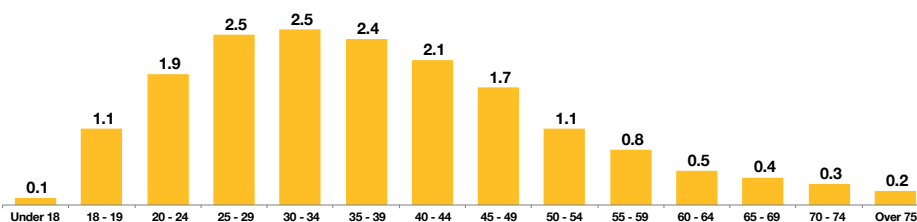

43. Ratios calculated as a proportion of the female population aged 14 and over based on provisional population figures as at 1 July 2014.

Table 14.6. Males reported for gender-based violence and subject to protection order or precautionary measures, by age group.

45. Ratios calculated as a proportion of the male population aged 14 and over based on provisional population figures as at 1 July of the reference year.

14.3. RELATIONSHIP BETWEEN VICTIM AND REPORTED AGGRESSOR.

By type of relationship between victim and reported aggressor, in 26.2% of cases the reported aggressor was the victim’s husband and in 6.8% he was her ex-husband.

Meanwhile, 23.3% were common-law partners and 20.8% were ex-common-law partners.

In three out of every four couples (75.0%), the reported aggressor was aged between 20 and 54 while the victim was aged between 18 and 44.

By place of birth, in 58.9% of couples both members had been born in Spain; in 7.3% both members had been born in the Americas; and in 6.2% they had both been born in other EC Member States.

Table 14.8. Relationship between victim and male reported for gender-based violence subject to protection order or precautionary measures.

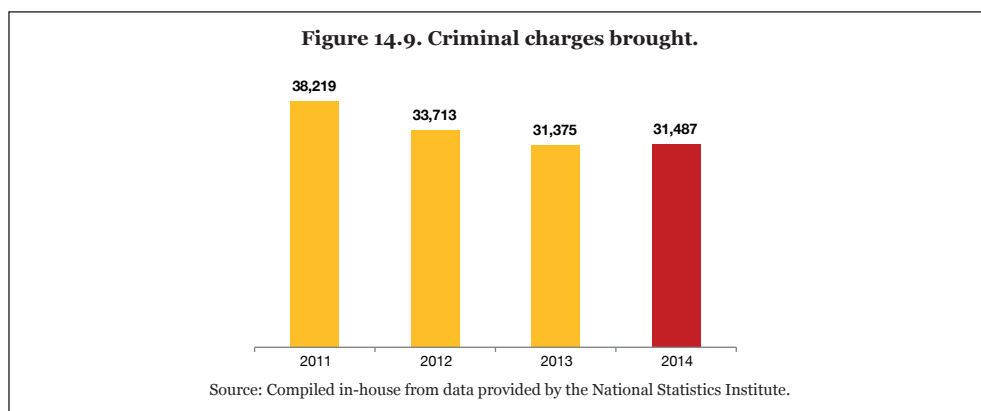

| | 2011 | 2012 | 2013 | 2014 | Variation in ratio (%) 2014/2011 | Variation in ratio (%) 2014/2013 |
|--------------------------|-------|-------|-------|-------|----------------------------------|----------------------------------|
| Spouse | 9,158 | 7,967 | 7,335 | 7,092 | -22.6 | -3.3 |
| Common-law partner | 7,748 | 6,790 | 6,213 | 6,307 | -18.6 | 1.5 |
| Ex-common-law partner | 6,661 | 6,066 | 5,615 | 5,638 | -15.4 | 0.4 |

14.4. CRIMINAL CHARGES AND PRECAUTIONARY MEASURES RELATING TO GENDER-BASED VIOLENCE.

The register reveals that in 2014 a total of 31,487 criminal charges⁴⁶ were brought against reported aggressors in cases of gender-based violence recorded that same year, 0.4% more than in 2013. The number of criminal charges fell notably between 2011 and 2014 (-17.6%).

The mean number of criminal charges per reported aggressor stood at 1.2, the same as the year before.

Of the total number of criminal charges brought in 2014, 29,374 were classified as crimes and 2,113 as offences. The most common crimes were associated with bodily harm (55.9% of crimes), threatening behaviour (19.8%), torture and other crimes against moral integrity (15.1%).

In 2014, the total number of precautionary measures sentenced⁴⁷ and recorded in the register in cases of gender-based violence stood at 83,156, 0.4% more than the year before.

By type of measure, 75.2% were criminal law measures and 24.8% were civil law measures.

The most frequent criminal law precautionary measures were bans on approaching specific persons (35.4% of all criminal law measures), bans on communicating with specific persons (33.5%) and provisional release (15.3%).

46. Each reported aggressor may be charged with more than one criminal offence.

47. Each case may be associated with several precautionary measures.

Among the civil law precautionary measures, the most frequent were *rulings on custody* (26.3% of all civil law measures), *rulings on maintenance payments* (26.1%) and *rulings on access* (23.9%).

15 WORKING GROUP ASSESSING THE APPLICATION OF THE LEGISLATION ON GENDER-BASED VIOLENCE (GROUP CREATED WITHIN THE NATIONAL OBSERVATORY REPORTING TO THE GOVERNMENT OFFICE FOR GENDER-BASED VIOLENCE)

CONCLUSIONS

1. Implementing the measure set forth in the National Strategy for the Eradication of Violence against Women (2013–2016) aims to ensure that victims of gender-based violence effectively receive **legal aid prior to the decision to file a formal complaint** and to provide the court with sufficient information to determine the facts and ascertain the level of risk to the victim. The following recommendations are made to the autonomous and national administrations — acting in co-ordination with the General Council of Spanish Lawyers, colleges of lawyers and social organisations — with power over justice and the promotion of equality in their respective jurisdictions.
 - In jurisdictions in which objective obstacles make it difficult to provide timely face-to-face legal aid, other remote means should be used to provide it.
 - Special consideration should be given to the victims facing greatest difficulty, such as disabled women or those encountering language barriers due to their country of origin. All tools and mechanisms necessary to ensure that these victims receive the relevant information, such as translation into various languages (including sign language and Braille), removal of architectural barriers and provision of assistance, should be provided where necessary.
 - Raise awareness, especially among participants in the justice system, including state security forces and regional and local police, of entry into effect of Royal Decree-Law 3/2013 of 12 February 2013, which recognises the right to legal aid of all

victims of gender-based violence irrespective of their economic means, and strengthens mechanisms to ensure effective fulfilment of the duty to inform victims of this right, as well as of the conditions under which it may be upheld or revoked.

2. **Comprehensive training should be compulsory for all practitioners specifically providing legal aid to victims of violence.** Such provision should be guaranteed both by the General Council of Spanish Lawyers and Spain's various colleges of lawyers, as well as by the central, regional and local administrations that provide resources to finance this training. For this reason, the competent authorities and institutions are recommended to establish minimum and uniform general requirements for academic and practical training throughout national territory. These should be guaranteed not only in relation to forensic practice, but also in relation to the specific social benefits and resources available to victims and available under applicable immigration law. Likewise, fulfilment of these requirements should be guaranteed in relation to the historical, psychological and sociological characteristics of the gender-based violence suffered in order to ensure quality of service, professional competence and inclusion of the gender perspective as guaranteed by the constitutional right of female victims of gender-based violence to effective judicial protection.
3. It is recommended that the competent authorities consider implementing for victims of gender-based violence the right to free choice of legal practitioner as set forth in Articles 27 and 28 of the Regulation on Legal Aid of Andalucía, implemented by Decree 67/2008 of 26 February 2008, including in the legal aid formula for gender-based violence a provision that grants the victim **free choice among the practitioners assigned to cases of gender-based violence**, subject to the organisational capacity of each college of lawyers.
4. It is recommended that the competent authorities consider that the service providing legal advice to the victim of gender-based violence also represents the victim until the opening of the hearing.
5. The need to maintain and enforce the ban on mediation in all gender-based violence proceedings is emphasised, in accordance with the amendment to Article 87.3, fifth paragraph, of the Law on the Judiciary implemented by Organic Law 1/04 of 20 December 2004.

It is also recommended to take the utmost care with the wording of any legislation that directly or indirectly regulates mediation so as to eliminate all room for doubt over interpretation.

6. As good practice to improve aid and protection for victims, it is recommended to establish **local co-ordinating bodies** in some jurisdictions with participation therein by legal authorities with appropriate powers — public prosecutors' offices, colleges of lawyers, state security forces and regional and local police, specialist social services and non-governmental organisations.
7. **A qualitative study is recommended to explore the causes of the notable differences between the various courts for violence against women in the proportions of protection orders granted to applicants, and between the proportions of acquittals and convictions issued by the bodies responsible for the proceedings.**
8. In order to produce indicators of use in drawing conclusions that improve legal practitioners' response to gender-based violence and the criminal offences deriving from it, which are highly complex, it would be recommendable **to make the criterion for introducing new statistical items more flexible** and to extend this recommendation to the National Statistics Institute and the General Council of the Judiciary. Thus, for example, it would be advisable that, when dealing with crimes of gender-based violence, the fields in judicial bodies' databases included waiver of civil action, private prosecution by the victim, waiver of prior prosecution, and information on whether the victim has exercised her right not to make a statement as per Article 416 of the Law on Criminal Proceedings, **rather than including waiver of proceedings (an option that does not exist in Spain's criminal law)**. Likewise, it is recommended to consider modifying the data collection and processing system employed by the SIRAJ record system supporting the administration of justice to make it possible to extract data on mean length of time precautionary measures remain in place and the reasons for their removal (revocation, expiry of deadline, acquittal or final conviction).
9. Efforts should continue to **consider minors direct victims of gender-based violence**, as recommended in the National Strategic Plan for Infancy and Adolescence, acting with all diligence when assessing the risk to which minors are exposed when imposing criminal or civil measures that place them in a family environment

characterised by gender-based violence and strengthening the assistance and support measures available to minors set forth in Article 19 of Organic Law 1/2004.

10. The **emergency forensic medical protocol used to assess risk of gender-based violence** should be adopted as a tool for collecting data about that risk and should be used in both emergency situations and at scheduled intervals throughout proceedings. Greater use is recommended, as is raising awareness about this instrument throughout the administration of justice and among forensic physicians, as is already being done by the Ministry of Justice, the Public Prosecutor's Office and the General Council of the Judiciary.
11. Efforts should continue to ensure that all personnel working within the administration of justice who produce forensic reports, especially when involved in proceedings conducted by courts dealing with violence against women and by special courts, receive specialised cross-cutting training that mainstreams the gender perspective. This should apply equally to public sector employees and temporary and external personnel, incorporating specific content about gender-based violence in civil service exams and, at all times, differentiating between gender-based violence and domestic violence while promoting continuing professional development and involving other participants in the legal system in that training.
12. The importance of the Government Office for Gender-based Violence, as the specific body co-ordinating common policies to prevent violence and protect and support victims, should be emphasised and a uniform map of resources should be drawn up and a common definition of them should be produced.
13. It is recommended to extend these conclusions to all competent bodies and institutions and to all relevant effect.

COAL TIT

In compliance with Article 30 of Organic Law 1/2004 of 28 December 2004 on measures to provide comprehensive protection against gender-based violence, the National Observatory on Violence against Women reviewed and approved this 8th Annual Report at its meeting of 3 June 2016.

This document comprises a **Statistical Annual Report on Gender-based Violence** produced by the Subdirectorate-General for Prevention and Knowledge of Gender-based Violence (Government Office for Gender-based Violence).
